# STATE OF THE ART IN DATA VISUALIZATION

## *COURSE # 28*

**CHAIR:**

***Olin Lathrop***
*Cognivision, Inc.*

**SPEAKERS:**

***Maxine Brown***
*University of Illinois*

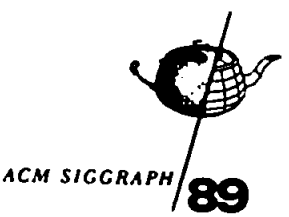
***Steve Legensky***
*Intelligent Light*

***Mark Smith***
*Cognivision, Inc.*

***Lloyd Treinish***
*NASA Goddard Space Flight Center*

***Tim VanHook***
*Sun Microsystems, Inc.*

***Velvin Watson***
*NASA Ames Research Center*



*Boston, Massachusetts*
*31 July - 4 August 1989*

## Table of Contents

## Course Description

Each speaker is an active participant in the data visualization field, and will discuss technical details of his/her latest research. This is a unique opportunity to hear ideas and experiences that are not ready for, or usually omitted from formal publication. There will be no re-presentation of earlier papers, nor will any of the speakers be presenting papers on the same topics at the technical session.

## Who Should Attend

This course is for technical individuals who have a strong interest and some acquaintance with data visualization, and would like to hear what some of the active reserchers in the field are up to. It will be very useful for those looking to solve their own particular data visualization problem. It is not intended for those seeking an overview of visualization.

## Recommended Background

A sound knowlege of computer graphics is required, particularly in the area of rendering algorithms. Attendees should already understand what visualization is and why it is useful.
