1 to 6 August 1993*

COURSE NOTES 43

Implementing Virtual Reality

ORGANIZER
Steve Bryson
Computer Sciences Corporation

LECTURERS
Randy Pausch
University of Virginia
Warren Roblnett
Virtus, Inc
Andries van Dam
Brown University

Course Abstract

While virtual reality systems seem to hold great promise for facilitating the use of computers, actual virtual reality development is fraught with difficulties. These difficulties include limited hardware, uncertain interface paradigms and the integration of various components and concepts into a high-performance system. This course addresses these and other difficulties. We begin with an introduction to the virtual reality field, both in reference to computer graphics and in terms of the current state of the art. Interface hardware will be surveyed, emphasizing the performance limitations of current products. The human factors impact of the limited interface devices will be discussed on both a theoretical and phenomenological level. After setting this background, the external design of a virtual environment will be discussed from the point of view of how that environment is experienced by the user. The objects that populate a virtual environment will be discussed both in the abstract and through examples. The implications of the interactive user interface on system performance will be a primary focus. The actual implementation of the virtual environment will be addressed, discussing both the software platform and the overall system. The course will end with a discussion of virtual reality development on a budget and lessons learned about how to get a virtual reality project going from start to a useful application.

Speaker Biographies

Steve Bryson

Steve Bryson is an employee of Computer Sciences Corporation working under contract for the Applied Research Office of the Numerical Aerodynamics Simulation Systems Division at NASA Ames Research Center. In this position he is researching the use of virtual environment technology in various fields of scientific visualization primarily the visualization of fluid flow. Prior to this position he worked at the NASA Ames VIEW lab developing the first fully integrated virtual environment facility. Prior to that he was one of the original employees at VPL Research Inc. a small company devoted to the development of virtual environment technology.

Steve Bryson's formal training is in mathematical physics and he is most interested in virtual reality as a way to express abstract concepts and understand the real physical world. He currently teaches popular adult and children's classes in theoretical physics at the California Academy of Sciences. He is an active amateur musician and has written ten sound tracks for sky shows at Chicago's Adler Planetarium.

Randy Pausch

Randy Pausch is an assistant professor in the Department of Computer Science at the University of Virginia. His main research interests include human-computer interfaces, computer graphics, software environments and education. He is active in studying various issues of human performance in virtual reality.

Warren Robinett

Warren Robinett is a designer of interactive computer graphics software and hardware. He was educated at Rice University and Berkeley receiving a BA in "Computer Applications to Language and Art" in 1974 and an MS in Computer Science in 1976. In 1978 he designed the Atari video game Adventure, the first graphical adventure game. In 1980 he was co-founder and chief software engineer at The Learning Company, a publisher of educational software. There he designed Rocky's Boots, a computer game which teaches digital logic to 11 year-old children.

Rocky's Boots won Software of the Year awards from three magazines in 1983. In 1986 Robinett worked as a research scientist at NASA Ames Research Center where he designed the software for the Virtual Environment Workstation, NASA's pioneering virtual reality project. In 1989 he came to the University of North Carolina to direct the Head Mounted Display Project. In 1992 he became co-director of the Nanomanipulator Project at UNC which interfaces a scanning tunneling microscope to a head mounted display to allow micro teleoperation at atomic scale on the surface of a sample beneath the microscope.

Andries van Dam

Andries van Dam is a professor of Computer Science at Brown University where he has been on the faculty since 1965 and was one of the Department's founders and its first Chairman from 1979 to 1985. His research has concerned computer graphics, text processing and hypermedia systems and workstations. He has been working for over 20 years on systems for creating and reading "electronic books" based on high resolution interactive graphics systems for use in teaching and research. He was the coordinator of the Core graphics standard effort in the mid seventies and of the PHIGS+ definition group in the mid eighties. van Dam received the B.S. degree from Swarthmore College in 1960 and the M.S. and Ph.D. from the University of Pennsylvania in 1963 and 1966 respectively. He helped to found and was an editor of Computer Graphics and Image Processing from 1971 to 1981 and was an editor of ACM's Transactions on Graphics from 1981 to 1986. In 1967 Professor van Dam co-founded ACM's SIGGRAPH. The widely used reference book Fundamentals of Interactive Computer Graphics, co-authored with J.D. Foley, was published by Addison Wesley in 1982, the greatly expanded successor Computer Graphics: Principles and Practice co-authored with J.D. Foley, S.K. Feiner, and J.F. Hughes, was published in June of 1990. Pascal on the Macintosh, a Graphical Approach, co-authored with David Niguidula, was published by Addison Wesley in 1987. van Dam has authored or coauthored over 75 papers. In 1974 van Dam received the Society for Information Display's Special Recognition Award and in 1984 the IEEE Centennial Medal. In 1988 he received the State of Rhode Island Governor's Science and Technology Award and in 1990 he received the National Computer Graphics Association's Academic Award. In July 1991 he received the SIGGRAPH's Steven A. Coons Award. In May 1992 Brown University named him to the L. Herbert Ballou University Professor Chair. He is past Chairman of the Computing Research Association, Senior Consulting Scientist at Electronic Book Technologies, Chairman of the Technical Advisory Board of ShoGraphics, and a member of Microsoft's Research Technical Advisory Board.

Course Schedule

15 min	Introduction Steve Bryson	1 1
30 min	Perspectives on Virtual Reality Andries van Dam	1 2
1 hour	Virtual Reality Hardware Steve Bryson	1 3
15 min	Break	
1 hour	Human Factors of Virtual Reality Design Randy Pausch	1 4
1 5 hours	Lunch	
1 hour	Designing the Virtual World Warren Robinett	1 5
30 min	Software Development Environment Randy Pausch	1 6
15 min	Break	
45 min	The Integrated Virtual Reality System Steve Bryson	1 7
30 min	The Inexpensive Virtual Reality System Randy Pausch	1 8
30 min	Bootstrapping a Virtual Reality Project Steve Bryson, Randy Pausch, Warren Robinett, Andries van Dam	

Table of Contents

Presentations.

Introduction	11
Steve Bryson	
Perspectives on Virtual Reality	12
Andries van Dam	
Virtual Reality Hardware	13
Steve Bryson	
Human Factors of Virtual Reality Design	14
Randy Pausch	
Designing the Virtual World	15
Warren Robinett	
The Software Development Environment	16
Randy Pausch	
The Integrated Virtual Reality System	17
Steve Bryson	

Papers.

The Virtual Windtunnel	21
Steve Bryson and Creon Levit	
The Distributed Virtual Windtunnel	31
Steve Bryson and Michael Gerald Yamasaki	
Virtual Planetary Exploration	41
Lewis E Hitchner	
Virtual Reality on Five Dollars a Day	51
Randy Pausch	
Implementation of Flying, Scaling, and Grabbing in Virtual Worlds	61
Warren Robinett	
Using Virtual Menus in a Virtual Environment	71
Richard H Jacoby and Stephen R Ellis	
Three Dimensional Widgets	81
D Brookshire Conner et al	
Interactive Shadows	91
Kenneth P Herndon et al	
An Interactive 3D Toolkit for Constructing 3D Widgets	101
Robert C Zeleznik et al	
A Computational Model for the Stereoscopic Optics of a Head Mounted Display	111
Warren Robinett and Jannick P Rolland	
High Resolution Virtual Reality	121
Michael Deering	
Measurement and Calibration of Static Distortion of Position Data from 3D Trackers	131
Steve Bryson	
On Temporal Spatial Realism in Virtual Reality Environments	141
Jiandong Liang Chris Shaw and Mark Green	
A Testbed for Characterizing Dynamic Response of Virtual Environment Spatial Sensors	151
Bernard D Adelstein Eric R Johnston and Stephen R Ellis	
Effects of Lag and Frame Rate on various tracking Tasks	161
Steve Bryson	
A List of Virtual Reality Technology Vendors	171
Randy Pausch
