

CONTENTS

	Page #
0. Presentations and Papers	1
1. The Context of Computer Animation	7
Real-Time Animation vs. Non-Real Time Animation	
Synthetic Imagery vs. Motion Control	
The Edge of the Art	
2. Time	13
Elements of Time Modeling	
Continuous and Discrete Time	
Sampling and Motion Blur	
Relative and Absolute Time Frames	
Usage of Time Models	
The Shutter	
Progression of Dimensions	
Time Measurement Units	
Circular Measurement Units	
Time Sequence Games	
Time Sequenced Stereopsis	
3. Applications of Computers in Animation	29
Motion Control: Context	
Motion Description	
Alignment Techniques	
Slig Scans, Streaks, & Strobes	
Background Animation	
Color Table Animation	
Hardware Scrolling	
Recalculate and Redraw	
Fill	
Cell Animation	
Whole Frame vs. Cell	
Production Model	
Compositing	
Cell Editor	
Scaling	
Solids Modeling	
Lens	
Menu	

	Page #
4. Animation Techniques	59
Motion Types	
Transformations	
Motion Pathways	
Concatenation: Global vs. Local	
Skeletal Animation	
Cycles	
Inbetweening	
Parametric Controls	
Squash and Stretch	
5. Dynamics	73
Absolute vs. Incremental	
Abstract Dynamic Parameters	
Interpolation	
Parameter Interpolation	
Eases	
Hand Easing Methods	
Voelpel: Parameter Paths	
Steketeer & Badler: Parametric Keyframe Interpolation	
Shelley & Greenberg: Path Specification & Coherence	
Kochanek: Interpolating Splines	
6. Constraints	125
Dependency Relationships	
Resolution of Systems of Constraint	
Korein & Badler: Generating Motion of Articulated Structures	
7. Scripts	139
Repeatability	
Assigning Dynamics to Sequences	
Control of Complexity	

	Page #
8. Scripting Systems	145
Script Notations	
Script Editing	
Interactive Adjustment	
Sequencing	
Traditional Layout Sheet	
Work Sheet	
Wipe Control	
Wipes	
Layout (Dope) Sheet	
Interactive Motion Systems	
Diaquest Equipment	
New Commands for Videotape and Camera	
Reynolds: Scripts & Actors	
Fortin, Lamy, & Thalmy: Multiple Track Animator System	
Kovacs: Previewing Robotic Motion	
Time Modeling Examples	
9. Simulation	199
Script/Simulation Hybrid	
Objects, Actors, and Characters	
Self-Scripting Animation	
10. Locomotion and the Simulacrum	209
Animal Locomotion	
Dooley: Anthropometric Modeling	
Bergeron: Techniques for Animating Characters	
Fox: Character Animation	
Calvert, Chapman, & Patla: Labanotation	
Singh, Beatty, Booth, & Ryman: Benesh Notation	
Bergeron: "Tony De Peltrie"	
Kroyer: Animating with a Hierarchy	
Zeltzer: Motor Control Techniques	
Film/Videography	297
SIGGRAPH Video Review	301
Annotated Bibliography	305
