

ACM SIGGRAPH, the SIGGRAPH 99  
Conference and Computer Animation Festival  
are proud to present the world premiere of

# the story of computer graphics

# the story of computer graphics

From its early development as an obscure topic of research to its widely accepted role as an important communication tool, computer graphics has exhibited a rich history of human accomplishment. Computer Graphics has changed the way we work and play. This movie documents some of the most compelling stories behind the striking graphics and technology that we take for granted in today's environment. This is the "human" story of representative innovators who have forever changed the way in which we interact with the world.

The *Story of Computer Graphics* chronicles the history of the industry, its impact on society, and the excitement of future possibilities. As an official SIGGRAPH history project, care was taken to produce a lasting document that will inform and inspire generations to come, and appeal to a broad audience beyond the computer graphics community.

One of the main goals of this HDTV documentary is to help educate the general public about computer graphics. It is ideal for presentations at educational institutions of all levels. It also benefits the computer graphics community by increasing awareness of the history, impact and direction of computer graphics. This awareness will increase employers' understanding of the special needs and situations of employees working in computer graphics.
