* When the Creative Applications Laboratory is scheduled for specific technical sessions, it may not be available for use by other attendees.

** Tickets may be required for some installations in Art Gallery: Touchware and Enhanced Realities.

welcome

to SIGGRAPH 98, version 25.0 of the world's greatest showcase of advances in computer graphics and interactive techniques!

Step into the forever-improving future!

You and your colleagues have created a conference showcasing technology's reach into forms of expression that are more meaningful to the human experience. It's that one week, in one place, where education, excitement, exchange, and fun energize the greeting, meeting, and companionship of 30,000 of your closest friends. This is your classroom, your living room, your front porch, your wonderworld, and corner cafe.

This year, we invite you to participate in and celebrate a small pause, a brief glimpse at the exciting and colorful history that this community creates with every advance, invention, and new dream realized over 25 years of SIGGRAPH conferences.

SIGGRAPH 98 is about people. From the conference identity to the content you have brought to Orlando, your community of scientists, artists, educators, entrepreneurs, and visionaries has fulfilled and expanded the vision we sketched nearly two years ago for SIGGRAPH 98.

It's here, it's yours. Your SIGGRAPH 98 Conference Committee friends thank you for the honor of creating this container for your inspiring achievements.

Enjoy this week of wonderment in Orlando!

Walt Bransford
SIGGRAPH 98 Conference Chair

programs and events

Keynote Address/Awards

Wednesday 22 July 8:15 - 9:45 am Hall E 2

Jim Blinn, Graphics Fellow at Microsoft Research and recipient of the first SIGGRAPH Computer Graphics Achievement Award, surveys the computer graphics scene from his unique perspective as a scientist, engineer, artist, and author. Over the past 25 years, his contributions and achievements have exponentially expanded the horizons of computer graphics.

Immediately before the keynote, SIGGRAPH presents two awards:

- **Michael Cohen**, Microsoft Research, receives the 1998 Computer Graphics Achievement Award for his achievements in radiosity, constraint-based animation, shape design, image-based rendering, and realistic image synthesis.
- **Maxine Brown**, University of Illinois at Chicago, receives the first SIGGRAPH Outstanding Service Award for her many years of leadership on SIGGRAPH organization and conference committees, including chair of SIGGRAPH 92 (Chicago).

25th Conference Celebration

Exhibits and events celebrating the history of SIGGRAPH and computer graphics, and their influence on technology, society, business, applications, education, and aesthetics:

- **Videoconference with panelists at SIGGRAPH 98**, the Smithsonian Institution, and the National Museum of Photography, Film & Television, Pictureville, Bradford, United Kingdom
- **Digital Campfire** – the great stories and legends of computer graphics told by the luminaries themselves
- **25th Conference Recognition Ceremony**
- **Historical displays and exhibits** – Hardware, software, and memorabilia
- **Classic animations and art**
- **A collection of computer graphics seminal writings**
- **25th Celebration Party**, hosted by SIGGRAPH 98, SIGGRAPH Professional Chapters, and friends

Courses

Formal instruction in computer graphics theory, mathematics, and applications presented by experts in every aspect of the discipline in three formats: full-day courses, half-day courses, and two-hour tutorials.

Papers

The world's most distinguished and respected forum for the latest advances in computer graphics. The Papers committee subjects hundreds of submissions to rigorous selection criteria and selects the most significant and provocative work by an international contingent of scientists, engineers, researchers, and application developers, who present their achievements at SIGGRAPH 98.

Panels

This highly interdisciplinary program sparks animated discussions and provides thought-provoking insights from some of the top professionals in the interactive and graphics world. Panels explore the art and science of image and interface, and address the technical, practical, aesthetic, and social challenges that we face as we build the future into the next millennium. All SIGGRAPH 98 Panels will be simultaneously interpreted into Japanese.

SIGGRAPH 98 の全てのパネル討論は、日本語に同時通訳されます。

Sketches

Lively presentations of interesting new ideas, unique collaborations, late-breaking results, works in progress, and novel applications of computer graphics and interactive techniques. Sketches are presented in four categories: Technical; Art, Design, and Multimedia; Animation; and Applications.

Educators Program

Computer graphics and interactive techniques in learning environments at all levels, from K-12 through university. For SIGGRAPH 98, the Educators Program has expanded to include papers, panels, a workshop, and the Electronic Schoolhouse – a hands-on area where educators can exchange information on how they use computer graphics.

Conference Programs/Activities

Art Gallery: Touchware

A milestone exhibition chronicling 25 years of computer art from early algorithmic drawings and paintings to modeled figures and "pebble drawings" by pioneering computer artists. Artistic insights reveal the simultaneity of touch as a sensory experience and the ephemeral experience of being in touch electronically via the Internet. Artworks include digital paintings, drawings, and photographs; interactive installations; teleperformance projects; ARTSITE Web-based creations (www.siggraph.org/s98/conference/art/artsite.html); and work by some of the earliest pioneers of computer art.

Community Outreach

Room 330 BC

Educators, students, and representatives of the computer graphics industry collaborate to explore how kids and their families can apply new technologies for exploration, fun, and learning.

Computer Animation Festival

Animations, performances, and interactions that show computer graphics as product, media, and process. A broad, international selection of this year's most outstanding work is featured in the Animation Theaters as well as in matinée and evening shows of the Electronic Theater. SIGGRAPH 98 also presents two animation events: sigKIDS Theater and, in honor of the 25th conference celebration, Film Show Classics.

Creative Applications Laboratory

The collaborative center of SIGGRAPH 98, where attendees explore the ideas, concepts, and technologies presented in Papers, Panels, Courses, and Sketches. CAL merges art, science, and engineering to create the "Wow!" of SIGGRAPH 98.

Digital Pavilions

Better living through networks and computer graphics: a premier, planet-wide showcase of networked computer applications that demonstrate future (quickly becoming present) ways to communicate, collaborate, and interact.

Enhanced Realities

1998's international showcase of innovations that facilitate human/idea/machine interaction. Where computer graphics combine with emerging technologies to create intelligent graphics that can learn, play, assist, and instruct. Where inspired design and technical breakthroughs point the way to a surprising future.

Fundamentals Seminar

Room 224 CDGH

Sunday 19 July 2 - 5 pm

An essential, accessible introduction to computer graphics jargon, concepts, techniques, and technologies. The perfect orientation for novices on the fast track.

Presenters

- Mike Bailey, University of California at San Diego/San Diego Supercomputer Center
- Wayne Carlson, The Ohio State University
- G. Scott Owen, Georgia State University

Interactive Dance Club

In this turn-of-the-century club, audience members become performers. Participants influence the music, images, video, and lighting via interactive zones that are linked together to create an overall experience. The place in the evening to hang out and watch, or jump in and play!

Receptions

Food, refreshment, fun, friends, and colleagues convene for informal evening interchange. Three receptions (the 25th Conference Recognition Ceremony, the 25th Celebration Party, and the Welcome Reception) are open to all SIGGRAPH 98 attendees. The Course Reception and Papers/Panels Reception are included with Full Conference registration.

• Welcome Reception

Hall C, Rooms 314, 315 B

Sunday 19 July 5 - 7 pm

• Course Reception

Renaissance Orlando Resort Pool

Monday 20 July 8 - 11 pm

• Papers/Panels Reception

Orlando Science Center

Thursday 23 July 8 - 11 pm

• 25th Conference Recognition Ceremony

Hall C Lobby

Wednesday 22 July 6 - 6:45 pm

• 25th Celebration Party

Wide World of Sports Complex at

Walt Disney World

Wednesday 22 July 9 pm - 1 am

Session Breakout Lounge

Hall F Lobby

After each technical session, join presenters and authors for continued discussion in a comfortable, informal lounge setting.

SIGGRAPH TV

Live events, recorded programming, and video coverage of SIGGRAPH 98 will be broadcast throughout the Orange County Convention Center and beyond.

sigKIDS

sigKIDS Art and sigKIDS Interactive feature exhibits that highlight computer graphics applications and work for and by children. These interactive exhibits are available for attendees of all ages to explore and experience.

Special Interest Groups & Birds of a Feather

Special Interest Groups (SIGs) are for attendees who think and work in similar technologies and environments. Birds of a Feather (BOFs), Room 204 C, are impromptu gatherings organized at the conference by anyone who posts a notice on the BOFs sign-up board at SIGGRAPH 98 (Hall C Lobby, OCCO).

T-Shirt Contest

Room 312

The annual, underground T-Shirt Contest will be juried at noon on Thursday, 23 July at SIGGRAPH 98. Bring your unique, CG-designed t-shirt with a description of the process used to create it. For information, contact:

Joe Lohmar

lohmar@siggraph.org

Special Sessions

Hand-Drawn Spaces

Monday 20 July 5:30 - 6:30 pm
Hall E 2

"Hand-Drawn Spaces" is a virtual performance in which dancers move across three projection screens and the spaces in between. The figures are modeled and rendered as three-dimensional sketches and animated by the intricate choreography of Merce Cunningham. The composition was created with motion fragments that were motion captured, key-frame reduced, footstep-extracted and then assembled into long-format sequences with motion-flow editing. In this Special Session, presenters discuss their individual contributions to this work and address the prospects of and for virtual dance.

Web 3D Round-Up: Tomorrow's Visions of Web-Based Virtual Reality

Tuesday 21 July 6 - 8 pm
Valencia Room D

The Web is round! Forget about html flatland. Come see the latest 3D offerings for the World Wide Web. Due to popular demand, SIGGRAPH 98 invited the SIGGRAPH 97 VRML Special Interest Group to expand their program to include all applications of 3D for the World Wide Web in their own Special Session.

This lively, fast-paced demo session is a guaranteed fun time for all.

Organizer

History of the Future: The Past, Present, and Future of Computer Graphics

Wednesday 22 July 12:45 - 1:45 pm
Hall E 2

Computer graphics and interactive techniques, once the esoteric purview of computer scientists in the ivory towers of academia and military research, have now permeated virtually every aspect of our culture. From high-tech film effects to the World Wide Web, from architecture to artificial intelligence, from computerized games to computerized brain surgery, computer graphics can be seen in all facets of modern life.

The 25th SIGGRAPH conference provides an opportunity to pause and reflect. Where were we going 25 years ago and before? Where did we end up? Were the predictions we made over the past 25 years accurate? What went wrong? What went right? What surprised everyone?

Join us for this insightful, humorous, and lively look at the past, present, past future, present past, and present future of computer graphics and interactive techniques.

Survival Stories from "Titanic"

Thursday 23 July 6:30 - 7:30 pm
Hall E 2

The chills. The thrills. The spills. Tales of human courage under daunting odds. Epic disasters in the face of looming deadlines. No, not the movie – the effects production.

Survival Stories from "Titanic" provides an intimate, in-the-trenches look at what it took to coordinate a massive multi-company project of this scale, and the management and people skills required. At SIGGRAPH 97, attendees got a sneak preview of some of the awesome special effects in "Titanic." This year, get an insider's view of the trials and tribulations of creating this Academy Award-winning epic disaster movie.

SIGGRAPH Bowl III

Friday 24 July 12:45 - 1:45 pm
Hall E 2

A quiz show that tests the knowledge of these Official Bowling Teams on a variety of computer graphics topics and trivia:

• Team Seattle: The Raining Champions

David Salesin
Andrew Glassner
Michael Cohen

• Team NYC: What are you looking at?

Scott Lang
Ken Perlin
Carl Machover

• Team Utah: Utah Teaputz

Peter Shirley
Peter-Pike Sloan
Robert McDermott

• Team Brown: Hooray for the Red, White and Brown

David "Spoke" Laidlaw
Nancy "Spork" Pollard
John "Spike" Hughes

• Team Grappa: The Twice-Fermented Team

Ken Musgrave
Dave Fracchia
one Wyvill to be named later

• Team Caltech: Catch the Wavelet

Peter Schröder
Al Barr
David Breen

• Team CMU: Straight from Mister Roger's Neighborhood

Paul Heckbert
Steve Seitz
Michael Garland

• Team ILM: Let the Wookiee Win

Joshua Pines
Dan Goldman
Florian Kainz
Subs: Rod G. Bogart, Doug Smythe

SIGGRAPH 98 programs and events focus on six broad technical themes. In this publication, symbols identify which Courses, Papers, Panels, Sketches, and Educators Program sessions are associated with these thematic tracks. Other programs also include track-related content.

Animation & Special Effects

Producing and using computer graphics techniques for animation, special effects, and other entertainment applications.

Courses

- 34 3D Computer Animation Workshop
- 39 The Art of Disney's "Mulan"
- 40 Compositing in the Digital Film Industry: Case Studies in Film Production

Papers

- NeuroAnimator: Fast Neural Network Emulation and Control of Physics-Based Models
- Subdivision Surfaces for Character Animation
- Large Steps in Cloth Simulation
- Texture Mapping for Cel Animation

Interaction

Design, implementation, and application of advanced, intuitive human-computer communication.

- 1 Physical Interaction: The Nuts and Bolts of Using Touch Interfaces with Computer Graphics Applications
- 35 Interactive Visualization and Web-Based Exploration in the Physical and Natural Sciences

- mediaBlocks: Physical Containers, Transports, and Controls for Online Media

Modeling

Creation and manipulation of representations for graphical objects.

- 13 Physically Based Modeling
- 16 Procedural Implicit Techniques for Modeling and Texturing
- 21 3D Geometry Compression
- 31 Cloth and Clothing in Computer Graphics
- 36 Subdivision for Modeling and Animation

- Subdivision Surfaces for Character Animation
- Multiresolution Surfaces (all papers)
- Realistic Modeling and Rendering of Plant Ecosystems
- Surfaces (all papers)

Rendering

Creation of realistic images from models, by computing the interaction of light with surfaces.

- 5 A Basic Guide to Global Illumination
- 11 Advanced RenderMan: Beyond the Companion
- 15 Image-Based Modeling and Rendering
- 33 Rendering with Radiance: A Practical Tool for Global Illumination

- Image-Based Modeling & Rendering (all papers)
- Image-Based Rendering (all papers)
- Rendering (all papers)

Virtual Reality

Creation of and immersive interaction with virtual environments.

- 14 Applied Virtual Reality
- 38 Immersive Environments: Research, Applications, and Magic

- Constellation: A Wide-Range Wireless Motion-Tracking System for Augmented Reality and Virtual Set Applications

Synthetic Actors

Creating, acquiring, programming, and controlling realistic, real-time human behavior.

- 10 Hardcore AI for Computer Games and Animation
- 22 Artificial Life for Graphics, Animation, Multimedia, and Virtual Reality
- 28 Virtual Humans: Behaviors and Physics, Acting and Reacting

- Retargeting Motion to New Characters
- Making Faces
- An Anthropometric Face Model Using Variational Techniques
- Modeling Realistic Facial Expressions From Photographs

Panels

Dis-Illusion of Life: Becoming a Digital Character Animator

Feature FX: Money Pit or Gold Mine?

Sketches

Technical Sketches

- Fast Multi-Layer Fog
- Adventures in Moving Session

Applications Sketches

- Previsualization for Starship Troopers, Managing Complexity in Motion

Animation Sketches

- All

Educators Program

The Language of Cinema and Traditional Animation in the 3D Computer Animation Classroom

Computer Vision in 3D Interactivity

The Sorcerer's Apprentice: Invoking Ubiquitous Computing for Computer Graphics

Out of the Box: Toys Break the Screen Barrier

Interfaces for Humans: Natural Interaction, Tangible Data, and Beyond...

Technical Sketches

- Star Cursors in Content Space: Abstractions of People and Places
- Plane-Shape Perception Using Point-Contact Type Force Feedback

Art, Design, and Multimedia Sketches

- Electronic Remapping: Body Augmentation in the Electronic Age
- Interactive Poem

Moving Mountains: Using Interactive Graphics to Teach Geography

The Physics 2000 Project: Interactive Physics on the World Wide Web

Web-Based Teaching of Computer Graphics: Concepts and Realization of an Interactive Online Course

Is Robust Geometry Possible?

Technical Sketches

- Another Fine Mesh Session
- Artificial Evolution of Implicit Surfaces
- Editing 3D Objects Without 3D Geometry Natural Causes Session

Applications Sketches

- DView
- Studying Sculpture with a Digital Model: Understanding Michelangelo's Pietà of the Cathedral

Ray Tracing and Radiosity: Ready For Production?

Technical Sketches

- The Light Brigade Session
- A Model for Anisotropic Reflections in OpenGL
- Quadratic Interpolation for Near-Phong Quality Shading

Applications Sketches

- Techniques Session

Virtual Reality as Healing Art

Are You Here? Presence in Virtual Reality: What Is It All About and Why Care?

Look Ma! Four Hands! New Models for Interacting with 3D Worlds

Human Factors in Virtual World Design: Psychological and Sociological Considerations

Special Session: 3D Web Roundup

Technical Sketches

- Optimizing Stereo Video Formats for Projection Based Virtual Reality
- Reality++ Session

Applications Sketches

- Time Travels in Virtual Landscapes
- Smithsonian Without Walls
- Training and Simulation Session
- Emerging Technologies Session

Virtual Reality in Education: Irish and American Students on the Virtual Frontier

Characters on the Internet: The Next Generation

Applications Sketches

- Virtual Stage: An Interactive 3D Karaoke System

Behavioral Modeling and Animation: Past, Present, and Future

Art, Design, and Multimedia Sketches

- It/I: Theatre with an Automatic Reactive Computer Graphics Character

creative applications laboratory

The collaborative center of SIGGRAPH 98, where attendees explore the ideas, concepts, and technologies presented in Papers, Panels, Courses, Sketches, Art Gallery: Touchware, and the Computer Animation Festival. CAL merges art, science, and engineering to create the "Wow!" of SIGGRAPH 98.

Location

Room 230

Days

Papers

Efficiently Using Graphics Hardware in Volume Rendering Applications

A Beam Tracing Approach to Acoustic Modeling for Interactive Virtual Environments

Non-Distorted Texture Mapping For Sheared Triangulated Meshes

The Office of the Future: A Unified Approach to Image-Based Modeling and Spatially Immersive Displays

A Distributed 3D Graphics Library

Panels

Listen Up! Real-Time Auditory Interfaces for the Real World

Courses

- 1 Physical Interaction: The Nuts and Bolts of Using Touch Interfaces with Computer Graphics Applications
- 7 A Visual Introduction to OpenGL Programming
- 17 Advanced Graphics Programming Techniques Using OpenGL
- 19 Beyond Bottlenecks and Roadblocks: Internetworked 3D Computer Graphics
- 20 Real-Time Graphics for Visual Simulation: Advanced Techniques from the Top Down
- 28 Virtual Humans: Behaviors and Physics, Acting and Reacting
- 34 3D Computer Animation Workshop
- 35 Interactive Visualization and Web Exploration in the Physical and Natural Sciences

Sketches

Interactive Poem

Designing with Words: a Model for a Design Language in a MOO

COURSES

Formal instruction in computer graphics theory, mathematics, and applications presented by experts in every aspect of the discipline in three formats: full-day courses, half-day courses, and two-hour tutorials. SIGGRAPH 98 Courses are not organized in three discrete levels of difficulty. Instead, the Courses Committee offers two other types of information:

- A course level indicator below each course title presents a more refined indication of course level, as derived from the course reviewers.
- For each course, a description, prerequisites, and a summary of topics covered have been carefully crafted to help you decide which courses are most appropriate for your background and interests.

Attendees who select the Full Conference registration option receive access to all SIGGRAPH 98 Courses and the Course Notes CD-ROM. Printed course notes can be purchased at SIGGRAPH 98.

Committee

DHCP

Network access is available from tables near the front of some course rooms. Attendees with laptop computers equipped for 10BaseT Ethernet can access SIGGRAPH 98's GraphicsNet internal network and the Internet via DHCP (Dynamic Host Configuration Protocol), which dynamically "hands out" and later reclaims IP addresses. This network facility is a limited experiment. For a few courses, a few ports in a small number of course rooms are available on a first-come, first-served basis.

2 Exploring Gigabyte Data Sets in Real Time: Algorithms, Data Management and Time-Critical Design

An introduction to haptic hardware and current software techniques with an emphasis on applications. The course begins with an introduction to haptics and the basic psychophysics of human touch, followed by the evolution of haptic devices. It includes an overview of haptic software techniques, examples of practical microscopy, and how volumetric representations and applications are used in medicine and modeling. It concludes with a summary of the future of haptic technology and a hands-on demonstration.

Prerequisites

Participants should have a working knowledge of computer graphics, virtual environments, and visualization techniques. Familiarity with volume rendering methods is useful.

Topics Covered

Haptics history, haptic devices, psycho-physics, basic mechanics, physical modeling, geometric rendering techniques, volumetric rendering techniques, haptic modeling and painting, and haptics APIs.

Modern data sets arising from computational physics are extremely large and involve complex, difficult-to-exhibit phenomena. "Real-time" interfaces have proven useful for analysis of these data sets, but "real-time" performance has been difficult to achieve with such large amounts of data. This course discusses the issues that arise in real-time interactive visualization of very large (>100 gigabytes) data sets and presents solution strategies that emphasize feature detection and time-critical design that impacts architectures, interfaces, algorithms, and data management.

Prerequisites

Familiarity with the basics of scientific visualization and three-dimensional computer graphics.

Topics Covered

Architectures and algorithms for near-real-time interactive visualization, including fast access to data on disk, extraction of interesting features, and time-critical visualization techniques.

3 Parallel and Distributed Photo-Realistic Rendering

Parallel processing offers an approach that significantly reduces computation time and exploits combined memory resources. Complex environments must be distributed over the processors' local memories, so careful attention must be paid to the correct management of data and tasks, to ensure an efficient and scalable solution. This course addresses techniques for decreasing the volume of cached data, aiding memory management, and optimizing communication. It includes task scheduling and memory management techniques for three photo-realistic graphics algorithms: ray tracing, radiosity, and particle tracing. Their different parallel implementation approaches are compared and contrasted.

Prerequisites

Knowledge of ray tracing, radiosity, particle tracing, geometric simplification, levels of detail, impostors, and related topics. Experience with parallel processing is useful, but it is not assumed.

Topics Covered

Task migration, coherence, load balancing, and communication issues, as well as data decomposition, data redistribution, and various caching mechanisms. Their application to ray tracing, radiosity, and particle tracing is compared and contrasted.

4 Advanced Geometric Techniques for Ray Casting Volumes

Hardware-assisted volume rendering techniques for solving common practical problems in geo-science, medical, and scientific applications. The course introduces a framework that unifies treatment of volumes and geometry by employing a highly flexible tetrahedral decomposition of volumetric shapes. It then presents effective techniques for handling such commonly occurring tasks as: deforming volumes, defining arbitrarily shaped regions of interest, clipping to non-planar surfaces, rendering multiple volumes, hardware-assisted shading, unstructured grids, and large data set roaming.

Prerequisites

Familiarity with fundamentals of 3D computer graphics, basic volume visualization techniques (ray casting), basic programming skills, and working knowledge of OpenGL with an emphasis on texture mapping.

Topics Covered

Advanced volume rendering techniques using hardware acceleration accessible through OpenGL, disassociation of volume appearance and geometry, tetrahedral primitives, polygonization, brick-ing, mixing volumetric and polygonal shapes, multiple volumes, shading, deformations, clipping, unstructured grids, and performance tips.

5 A Basic Guide to Global Illumination

The goal of global illumination methods is to simulate the path of light in an environment through the image plane in order to compute realistic images. Not all applications require the accuracy attainable with global illumination methods, and not all global illumination methods are good for all possible lighting effects. In this course, comparison of physical experiments provides insight into the basic methods. The target audience includes: people who are new to graphics, who teach and work in other areas of graphics, and who might want to understand how these methods differ from other rendering techniques.

Prerequisites

Beginning experience with graphics, including representation of geometry by polygons specified as lists of vertices. Familiarity with physics and math at a level provided by first-year college courses in physics and calculus is also assumed.

Topics Covered

The course presents a model of image formation in which RGB values in an image are determined by a global illumination method. It also presents the physical equations that govern global illumination, how these equations relate to image RGB values, and ray tracing and radiosity as they relate to these equations.

6 From Fourier Analysis to Wavelets

Fourier analysis and wavelet theory, the fundamental mathematical framework for the description of functions in the time and frequency domains, are the key elements for effective analysis of function properties, as well as for efficient implementation of computational methods. For this reason, it is very important in many application areas to find function descriptions that are localized both in time and frequency. In this course, attendees learn the mathematical concepts behind Fourier analysis and wavelets. These concepts are significant for researchers and developers alike, because they are involved in so many of the problems in computer graphics and image processing.

Prerequisites

Knowledge of linear algebra and calculus. Some familiarity with analysis of real and complex functions is desirable. The course also assumes basic knowledge of signal and image processing.

Topics Covered

The main tools for function analysis in the frequency domain (the Fourier and Windowed Fourier Transforms), fundamental aspects of multiresolution analysis and its importance to the construction of wavelets, the main principles of computation with wavelets and their implementation, and various extensions of the basic wavelet transform.

7 A Visual Introduction to OpenGL Programming

An introduction to writing interactive graphics programs using the OpenGL API. Instead of snippets of code and static, captured images, this course features interactive tools to visualize and experiment with computer graphics concepts, such as transformations, lighting, and texture mapping. Detailed explanations focus on controlling the position and movement of the camera, the light sources, and objects in a scene. The effects of changing the order of modeling transformations (and their associated matrices) are discussed and visually demonstrated.

Prerequisites

Ability to program in a structured programming language such as C, C++, or Java and familiarity with mathematical concepts such as matrix multiplication, trigonometry, cross products, and dot products. Knowledge of transformations, lighting, and texturing is helpful. This course assumes no prior knowledge of OpenGL programming. It may be too elementary for those who are experienced with OpenGL.

Topics Covered

The syntax and structure of the OpenGL API for writing programs that render 2D and 3D, transformed, lit, shaded, textured geometric objects with hidden surfaces removed. Underlying mathematical principles for a graphics rendering library are also discussed.

8 Theory and Practice of "Tour Into the Picture"

In-depth exposition of a new image-based rendering technique, "Tour Into the Picture" (TIP), which was originally presented at SIGGRAPH 97. This technique gives a unique and powerful GUI for making "visually 3D" animation from a single 2D picture or photograph. The course gives practical and detailed guidance on how to use TIP, along with many animations and real-time demonstrations. The course also focuses on theoretical aspects of TIP, including features and applications not discussed in the original paper.

Prerequisites

Basic knowledge of 3D computer graphics. Working knowledge of rendering, modeling, and animation may be helpful. Programming experience using a 3D library is useful but not required.

Topics Covered

Basic and practical techniques used in image-based rendering approaches, such as texture/projection mapping and image warping, and a more general and theoretical approach to designing a GUI for image-based rendering.

9 Fundamentals of Video Compression Techniques

10 Hardcore AI for Computer Games and Animation

A picture may be worth 1,000 words, but it takes far more than 1,000 words to display a high-resolution image. When motion video is considered, the storage requirements become gigantic. Fortunately, techniques exist to lessen this data requirement without affecting the resulting image quality too badly. This course investigates and compares various compression techniques in still and motion video. It explores the underlying techniques that form the foundation of today's compression algorithms, with an emphasis on examining the trade-offs between quantity and quality for different techniques.

Prerequisites

A basic understanding of bit-mapped graphics is helpful. Attendees should understand the concept of the pixel as an RGB triplet, the image as a rectangular array of pixels, and the video clip as a sequence of images. No serious math skill is required. Because this course makes significant use of side-by-side slides that show subtle differences, good eyesight is helpful.

Topics Covered

The basics of digital color science, subsampling, quantization, rounding, error diffusion, delta coding, color spaces, spatial correlation, prediction, discrete cosine transforms, Huffman coding, macroblocks, and decompression.

Funge

Using ideas and techniques from cognitive robotics that are completely new to the computer graphics community, this tutorial imparts a basic understanding of the key issues associated with building intelligent characters for computer games and animation. In particular, within the concrete and intuitive framework of the situation calculus, it provides an in-depth survey of solutions to important knowledge-representation problems that arise in computer games and animation. It then proceeds to more advanced topics such as incorporating sensing, planning, and reactive behaviors. The tutorial concludes with a detailed look at new work on problems in cinematography, computer games, and behavioral animation.

Prerequisites

This tutorial is self-contained, but a degree of mathematical maturity is assumed. Attendees should not feel intimidated by standard notation from mathematical logic. Knowledge of programming, computer games, computer animation, or AI is a big advantage.

Topics Covered

The situation calculus, logic programming, possible worlds semantics, using interval arithmetic to handle uncertainty, non-deterministic specification of programs, and logical approaches to control.

Organizer and Lecturer
John Funge
 Intel Corporation

11 Advanced RenderMan: Beyond the Companion

Much of RenderMan's power is due to its flexibility and extensibility, which gives users the ability to customize the system to fit situations not envisioned by the original implementors. This course goes beyond the basics presented in *The RenderMan Companion* and teaches advanced tricks and techniques that are being used (or should be) in late-1990's special effects production. It examines examples of successful animations that made extensive use of RenderMan's features, particularly its Shading Language.

Prerequisites

Thorough knowledge of 3D image synthesis and computer graphics illumination models, and previous experience with the RenderMan Shading Language are required. Students should be facile in C. The course is not for those with weak stomachs for examining code.

Topics Covered

Modern methods of generating geometric data and handling geometric complexity, advanced Shading Language techniques, and antialiasing of shaders. Case studies include discussions of volumetric rendering, realistic lighting, and issues of integration with other CGI tools.

12 Introduction to Computer Graphics

The SIGGRAPH conference is an exciting event, but it is often an intimidating experience for first-time attendees. There are so many new terms, new concepts, and new products to try to understand. This course is designed to ease new-comers into the SIGGRAPH conference experience by presenting the fundamental ideas and vocabulary at a level that can be readily understood. Far from dry facts, this course also portrays the fun and excitement that led most of us here in the first place. Attendees leave the course well-prepared to understand, appreciate, enjoy, and learn from the rest of the SIGGRAPH conference events. It includes live demos, the source code of which will be placed on the Course Notes CD-ROM and made available on the Web.

Prerequisites

A basic understanding of computers and algebra. All other required knowledge is provided in carefully planned presentations.

Topics Covered

An understanding of computer graphics from data to photons; the fundamentals of geometry, interaction, hardware, modeling, rendering, and animation; and virtual reality and graphics for the World Wide Web.

Monday 20 July

13 Physically Based Modeling

Monday			Full Day
Beginning	Intermediate	Advanced	

Physically based modeling has become an important new approach to computer animation and computer graphics modeling. This course is of particular interest to those who wish to implement physically based modeling techniques and/or to read and critically appraise technical papers in the area. Bolstered by extensive course notes, the student with good basic implementation skills should be able to implement the techniques presented, not by rote, but confidently and with understanding. Course presentations favor visual, spatial explanations (including numerous examples on video) over formal symbol manipulation wherever feasible.

Prerequisites

Attendees are assumed to have a working familiarity with mainstream computer graphics modeling and animation. In addition to the usual graphics math skills, such as matrix-vector manipulations, attendees should have had a basic calculus course. Those with more extensive math backgrounds will also benefit, though an expert might find it slow going at times.

Topics Covered

Modeling the dynamics of particle systems and rigid bodies, basic numerical methods for differential equations, simulation of deformable surfaces, collision detection, modeling springs, energy functions, hard constraints, and collision and contact between objects.

14 Applied Virtual Reality

Monday			Full Day
Beginning	Intermediate	Advanced	

This course presents various rationales justifying the need for Virtual Reality (VR), and outlines what VR can offer beyond traditional computer solutions. It answers questions such as: Why do we need VR? What does VR have to offer that I can't already develop with existing 3D interactive computer graphics techniques? It does not focus on exploring available VR hardware and software. Rather, it examines the features of VR technology and relates them to specific applications. It also concentrates on identifying how VR can be applied to today's scientific and engineering challenges.

Prerequisites

Working knowledge of basic computer graphics. Some knowledge of real-time programming concepts, distributed computing, and networking is useful but not required.

Topics Covered

Rendering techniques, geometric modeling, texturing, graphics interface design, graphics hardware architectures, and software toolkits.

15 Image-Based Modeling and Rendering

Monday **Full Day**

Beginning **Intermediate** **Advanced**

This course explains and demonstrates a variety of methods for turning photographs into models and then back into renderings, including movie maps, panoramas, image warping, photogrammetry, light fields, and 3D scanning. It also reviews relevant topics in computer vision to show how these methods relate to image-based rendering techniques and how to apply the techniques to animation and 3D navigation.

Prerequisites

Solid understanding of the standard 3D graphics pipeline, including perspective projection, depth-buffering, visibility, lighting, and texture mapping is recommended. Knowledge of basic image processing, especially image resampling, and familiarity with the basic mechanisms of global illumination is helpful.

Topics Covered

Methods of deriving geometric information from photographs, including stereo, structure from motion, interactive techniques, and structured light; image-based data structures and rendering methods that use images and/or geometry for novel view generation.

16 Procedural Implicit Techniques for Modeling and Texturing

Monday **Full Day**

Beginning **Intermediate** **Advanced**

How to use implicit surfaces to model hands, blend bark, blow smoke, comb fur, trim shrubs and paint dogs. This course covers advanced topics in polygonization, particle systems, constraints, texture mapping, geometric texturing, solid texturing, volumetric modeling, L-systems, procedural modeling, and surface topology.

Prerequisites

Familiarity with standard computer graphics modeling and rendering techniques is assumed. Prior understanding of the blobby/soft/metaball model, particle systems, penalty method constraints, and procedural texturing techniques is helpful.

Topics Covered

Polygonization of implicit surfaces, particle system modeling and implicit functions, texturing, topology, and grammar-based and volume modeling with procedural techniques and implicit functions.

17 Advanced Graphics Programming Techniques Using OpenGL

Practical solutions to domain-specific graphics application problems. Emphasis is on techniques for interactive graphics running on mainstream graphics hardware. Topics are drawn from the major graphics application areas, including CAD, visual simulation/gaming, image processing, scientific visualization, and special effects. Attendees strengthen their understanding of the theory of core computer graphics concepts and the techniques that increase image realism, create special effects, and solve domain-specific rendering problems. They also learn how to identify and evaluate multiple approaches to solving rendering problems, analyze code examples that generate high-quality graphics images, and gain greater insight into the capabilities of OpenGL.

Prerequisites

Some OpenGL programming experience and good working knowledge of computer graphics concepts, particularly lighting and texture mapping. Background in graphics applications that use advanced rendering techniques, image processing, or volume rendering is desirable.

Topics Covered

How to apply theoretical knowledge and programming skills to solve domain-specific computer graphics problems.

18 Introduction to VRML97

VRML (the Virtual Reality Modeling Language) technology has broad applicability, including Web-based entertainment, distributed visualization, 3D user interfaces to remote Web resources, 3D collaborative environments, interactive simulations for education, virtual museums, and virtual retail spaces. VRML is a key multi-platform technology shaping the future of the Web. Participants learn how to use VRML to author their own 3D virtual worlds on the World Wide Web. They learn the syntax of VRML, typical usage patterns, how to avoid common mistakes, animation and scene design techniques, and tricks for increasing performance and realism.

Prerequisites

Basic understanding of computers and algebra, and a beginning-level understanding of 3D graphics concepts, such as that provided in Introduction to Computer Graphics (Course 12). Familiarity with computer programming is helpful, but not required.

Topics Covered

Syntax for building shape geometry and controlling shape coloration, texturing, shading, grouping, and animation; specification of preferred viewpoints, lighting, sounds, backgrounds, and fog; animation programming with Java and JavaScript; optimization techniques.

19 Beyond Bottlenecks and Roadblocks: Internetworked 3D Computer Graphics

An overview of network infrastructure issues relating to interactive 3D graphics. Relevant networking capabilities are demonstrated in real time. Topics include: how Multicast Backbone (Mbone) functions support real-time video and audio; collaborative work tools that functionally incorporate computer graphics across the Internet; and the relationship of OpenGL, VRML, Java, and HTML to Internet, streaming, and distributed interactive simulation protocols. This knowledge helps 3D graphics developers and users in building and integrating interactive applications that use the Internet effectively.

Prerequisites

Experience with graphics at the level of Introduction to Computer Graphics (Course 12) and general knowledge of how to apply 3D graphics to Web-page design.

Topics Covered

Introductory material relating to networking issues for computer graphics professionals. Internetworked 3D computer graphics case studies are presented in real time.

20 Real-Time Graphics for Visual Simulation: Advanced Techniques from the Top Down

Algorithms originally developed for flight simulators running on multi-million-dollar systems have evolved into useful methods for real-time interactive applications on much less expensive computers. The processing power and graphics capabilities of PCs, game systems, and high-end graphics systems are all steadily increasing. This course explores those interactive visual simulation algorithms and tricks that still require high-end hardware. It also details sophisticated techniques for handling large complex scenes in real time.

Prerequisites

An understanding of 3D graphics primitives, model and viewing transformations, and types of frame-buffer storage. Awareness of multiprocessing issues is helpful but not required.

Topics Covered

Database construction techniques, very large multiresolution textures, dynamically generated or morphed terrain, very large data sets of widespread geographic areas, paging of geometry and texture, frame-buffer storage, blending utilities, and non-linear image distortion correction.

21 3D Geometry Compression

In this course, the storage costs of current 3D shape representations are analyzed, and several recent schemes for lossy and loss-less geometry compression are described. In addition to compression schemes for triangle meshes, which require as low as one byte of storage per triangle, more aggressive surface fitting schemes and multiresolution, progressive-refinement approaches are discussed. Along with surface simplification or decimation methods, these approaches can be regarded as lossy compression schemes.

Prerequisites

Attendees should have some familiarity with the basic concepts of meshes, and the standard representations of polygonal models.

Topics Covered

Recent schemes for lossy and loss-less compression of triangle and polygonal meshes, including surface fitting, multi-resolution, and progressive approaches.

22 Artificial Life for Graphics, Animation, Multimedia, and Virtual Reality

This course investigates the increasingly important role that concepts from the emerging field of artificial life are playing in image synthesis, modeling, animation, multimedia, and virtual reality. Attendees are introduced to techniques for modeling and animating objects that are alive. They also explore techniques based on phenomena fundamental to biological organisms, such as evolution, growth, behavior, and biomechanics.

Prerequisites

A basic knowledge of geometric and physics-based modeling for animation and virtual reality. A general awareness of fundamental concepts such as Darwinian evolution, perception, behavior, and reinforcement learning is assumed.

Topics Covered

Modeling and animation of plants, animals, and humans; behavioral animation; communication and interaction with synthetic characters in virtual worlds; and artificial evolution for graphics and animation.

23 3D Visualization in Medicine

The growing health-care industry is providing new opportunities for applied research in computer graphics. This course concentrates on areas of the visualization pipeline not traditionally covered: acquisition and medical evaluation. It presents not only how to approach 3D visualization in medicine, but also, through case studies, the motivations and limitations of such methods. Participants interested in getting started in this area learn about the sources of volume medical data. Clinicians present their views of visualization and what their requirements are for effective and safe applications of computer graphics in medicine.

Prerequisites

Basic knowledge of 3D computer graphics and an understanding of the basic principles of image processing. Some familiarity with medical terminology or experience working on a clinical project is useful but not necessary.

Topics Covered

The sources and characteristics of 3D clinical data (X-ray CT, MRI, SPECT, etc.), advanced displays (virtual worlds) in medicine, and interactive graphics for surgery.

24 Advances in Volume Visualization

This course is devoted to advanced and more recent topics in volume visualization and should be viewed as a successor to an introductory course in volume visualization. The course covers the technology and several major advanced applications and techniques, and the challenges confronting the field of volume visualization.

Prerequisites

Course material is moderately difficult, due to the level of detail in the algorithms and methodologies. Basic knowledge of hidden-surface methods, rendering models, volume rendering of regular grids, and computer organization is recommended.

Topics Covered

Specific presentations on advanced topics in volume visualization research and practice. These include algorithms, architectures and application in volume graphics, volumetric global illumination, regular and irregular grid rendering, special-purpose architectures for volume visualization, and advanced applications of volume visualization.

Organizer

Arie Kaufman
State University of New York at Stony Brook

Kaufman
- 1:40 Volume synthesis**
Kaufman
- 2:20 Volumetric global illumination**
Sobierajski
- 3 Break**
- 3:15 Architectures for volume rendering**
Pfister
- 3:50 Irregular grid rendering**
Silva
- 4:25 Advanced applications**
Lorensen

25 Color Image Coding

Computers have been used to generate synthetic images since the first SIGGRAPH conference, and to generate color images for nearly that long. But only recently has it been practical to create and reproduce digital images with predictable, accurate color. This course introduces the science behind image digitization and color reproduction in computer graphics and video. A key aspect of obtaining accurate color is understanding the objective meaning of RGB codes: interpretation of a particular RGB code by one system may not match interpretation of the same RGB code by a different system. This course describes how color information is coded into RGB and details transformations among various color coding systems.

Prerequisites

Attendees should be comfortable with mathematics and have experience in designing or implementing hardware or software that processes color images. Alternatively, attendees should be very experienced in manipulating digital imagery.

Topics Covered

The coding of color image data has a different set of constraints than color specification. This course describes how linear-light intensity representations are transformed into the nonlinear RGB system, and then into the Y'CBCR representations used in studio video, DVC, JPEG, and MPEG. It also reviews the Y'UV and Y'IQ systems.

Organizer and Lecturer
Charles Poynton

Room 240 CD

Schedule

- 8:30 Perception and visual acuity**
Poynton
- 9 Luminance, lightness, and luma**
Poynton
- 9:45 Raster images in computing; gamma**
Poynton
- 10 Break**
- 10:15 Color science for video**
Poynton
- 11 Principle of constant luminance**
Poynton
- 11:30 Luma and color differences**
Poynton

26 Color Management: Theory and Implementation

Color management system technology enables device-independent color, which is an admirable goal for business graphics. However, image professionals do not seek device-independent color! This course explains the theory of color management, emphasizing its roots in human visual perception. It details implementation and use of color management systems, describes the ICC standard for color device profiles, and shows how a device profile is produced.

Prerequisites

Experience in designing or using software that processes color images, technical background in creating and manipulating digital imagery, detailed knowledge of image coding.

Topics Covered

Deliberate, subtle alterations to mathematical "correctness" are applied when a video or film image is originated, in order to maximize the subjective quality of the picture. This course outlines these alterations and suggests how they can be exploited. It demonstrates that profile construction is a blend of science and craft, of mathematics and perception.

27 Introduction to Audio Compression and Representation

28 Virtual Humans: Behaviors and Physics, Acting and Reacting

This course begins with an introduction to waveform sampling and transmission and storage issues, followed by an introduction to psychoacoustics that covers the unique acuties and limits of the human auditory system. Waveform compression, model-based speech compression, and psychoacoustically based frequency domain compression algorithms are covered. MIDI and other music representation schemes are introduced, in the context of existing music storage and manipulation systems as well as potential future compression schemes. Emphasis is on the tradeoffs of quality, compressed data size, and flexible data manipulation. C code examples are made available for various compression algorithms.

Prerequisites

Familiarity with the concepts of sampling and aliasing. Specific knowledge of Fourier or wavelet transforms is not required, but familiarity with the time and frequency domain representations of data is helpful.

Topics Covered

Statistically based compression of audio waveform data is basically useless, and loss-less compression of audio is generally impossible above the very lowest compression ratios. Incorporation of psychoacoustic principles in a perceptually loss-less system makes higher compression ratios possible. Sound examples are played to demonstrate the tradeoffs of different algorithms and compression ratios.

Organizer and Lecturer
Perry Cook
 Princeton University

Room 340 CD

Schedule

- 10:00 **Overview of compression in general**
Cook
- 10:05 **Waveform sampling, storage, and transmission**
Cook
- 10:15 **Psychoacoustics and limits of auditory perception**
Cook
- 10:35 **Sound and music representation**

- 10:55 **Survey of audio compression algorithms: a-law/u-law, ADPCM, MPEG-2, AC2/3, etc. The future: parametric multi-model compression?**
Cook
- 11:25 **Details of selected audio compression algorithms**
Cook
- 11:45 **Wrap-up and bibliographic references**
Cook

This course describes the state of the art in interactive, real-time, and networked human motion synthesis and actor behaviors. It demonstrates real-time human animation generated by techniques such as inverse kinematics, dynamics, and video motion capture, and by higher-level approaches such as dynamics and video motion capture, behaviorally scripted agents, personality profiles, and interpersonal and environmental reactivity. Various applications illustrate real-time synthetic humans in virtual prototyping, team tasks, synthetic actors, human-like avatars, language-based interfaces, and dance, tennis, and video motion capture.

Prerequisites

Experience in programming with algorithms or VRML is useful but not essential.

Topics Covered

Some mathematics background is useful in understanding the more advanced control techniques, but all are amply illustrated with working systems.

29 Developing High-Performance Graphics Applications for the PC Platform

Tuesday			Full Day
Beginning	Intermediate	Advanced	

This course explores techniques for optimizing locality of reference, efficient processing of graphics calls through the software/hardware pipeline, efficient use of graphics hardware resources, and software techniques to maximize graphics performance. It reviews interactions among CPU, accelerator, API, software driver, cache, memory, and bus. Cross-platform PC issues are discussed, including commonality among feature sets, scalability, and choice of graphics APIs.

Prerequisites

Experience in graphics programming. Understanding of basic computer architecture (memory hierarchy, concurrent execution, etc.) is helpful. This course is explicitly oriented toward the programmer.

Topics Covered

The essentials of the graphics software and hardware architecture for the PC platform and the programming techniques required to write the highest-performance graphics applications possible.

30 Art for Computer Graphicists

Tuesday			Full Day
Beginning	Intermediate	Advanced	

Creating effective and memorable images is an important part of communication. Computer graphics can help in that process. But the principles that underlie creation of great visuals don't change when applied to the computer. Composition, color theory, layout, and social and historical context are just some of the ideas that an artist brings to a piece to create clear, powerful messages. Many people who create computer graphics today have emphasized technical topics over artistic ones in their education and have missed these visual principles. This course discusses the context and basics of design, and reviews important, practical techniques and tools for creating visuals that speak to a viewer with clarity, precision, and emotion.

Prerequisites

An open mind and a willingness to explore.

Topics Covered

Art history, color theory, design, and the current state of art and design across cultures. Attendees receive reprints of essays and articles, and pointers to other media for further learning.

31 Cloth and Clothing in Computer Graphics

Tuesday			Full Day
Beginning	Intermediate	Advanced	
			

This course lays the groundwork for understanding cloth and its uses in computer graphics from scientific, artistic, computational and experiential perspectives. After tutorials on modeling and simulating cloth, and on the use of cloth for artistic effect in staging and costuming, it continues with an overview of research on virtual clothing, and on the modeling of woven and knit fabrics. It concludes with a panel involving the presenters and attendees.

Prerequisites

The equivalent of courses in 3D computer graphics, calculus, linear algebra, and differential equations. Some artistic background or knowledge of the process of producing computer animation is also helpful.

Topics Covered

Background information on finite element and interacting particle simulation methodologies, as well as techniques needed for solving stiff or constrained physical systems. Also, concepts from set and costume design will be elaborated.

32 Applications of Visual Perception in Computer Graphics

Tuesday			Full Day
Beginning	Intermediate	Advanced	
			

Introduction to visual perception and its application in computer graphics. This course surveys key findings in the mechanisms and characteristics of human visual perception and cognition, and focuses on the use of these results in specific applications in computer graphics, including scientific and information visualization, virtual environments and VRML, and realistic image synthesis. The audience: a wide range of graphics researchers and practitioners who want to create images that can be effectively interpreted by the human visual system.

Prerequisites

Some experience in graphics and/or visualization. Familiarity with standard visualization techniques, and the basic mechanisms of image synthesis such as modeling, shading, and rendering is helpful. Prior knowledge or background in perceptual psychology is not required.

Topics Covered

Fundamental findings on how we perceive light, color, pattern, motion, texture, shape; application of these results in a variety of areas in computer graphics.

33 Rendering with Radiance: A Practical Tool for Global Illumination

Tuesday			Full Day
Beginning	Intermediate	Advanced	

Essential information for artists, designers, and researchers interested in creating realistic images with the Radiance System. It has been used for virtual sculpture, theatrical backdrop rendering, and validating a computer vision system for the space shuttle. It is also used as a testbed for advanced global illumination land-rendering algorithms. Four experts demonstrate their work and provide tips for using the software to solve practical problems. Examples are taken from lighting analysis, theater lighting, and daylighting design. The author of Radiance describes the underlying principles that make this ray-tracing software unique.

Prerequisites

Participants should recognize the importance of global illumination and have basic knowledge or interest in lighting visualization. A general awareness of rendering concepts, such as ray-tracing, radiosity, procedural textures, image filtering, and tone-mapping is also beneficial.

Topics Covered

Light source modeling, daylight simulation, results analysis, validation, and ray-tracing techniques for global illumination.

34 3D Computer Animation Workshop

Tuesday			Full Day
Beginning	Intermediate	Advanced	

This course is presented in two formats: in a normal course room, and in the CAL. The first 100 attendees who arrive and agree to participate all day will be selected for the CAL. Attendees in the course room who are unable to participate in the CAL presentation on Tuesday can do the course exercises in the CAL Wednesday - Friday.

Introduction to high-end 3D computer animation capabilities. The course is divided into several segments, each consisting of a lecture on specific principles of 3D animation, a demonstration of how those principles are implemented with the software being used, and an extended exercise in which participants who are in the CAL work on a short animation that illustrates those principles.

Prerequisites

No prior experience with 3D computer animation is required, but participants should be familiar with basic keyboard, mouse, and menu interfaces.

Topics Covered

Beginning with simple modeling, rendering, and keyframing, participants progress through more complex techniques: texture mapping, path animation, and inverse kinematics. Participants learn the underlying principles shared by all 3D computer animation software packages and how these principles are implemented on one of today's major software packages.

35 Interactive Visualization and Web-Based Exploration in the Physical and Natural Sciences

The convergence of visualization methods with the World Wide Web and the relationship between real-time interactivity and exploration of scientific information. Highly illustrative atmospheric, oceanographic, and geographic examples are demonstrated in real time. Also highlighted: application of visualization tools and interactive techniques to examination and interpretation of scientific data sets, developing effective visualization paradigms for high-speed networking, database management, heterogeneous computing platforms, user interface design, collaborative computing, science education, and implementation of animation techniques.

Prerequisites

Experience with scientific visualization systems and terminology, and an understanding of computer graphics programming.

Topics Covered

Real-time, hands-on case study demonstrations of the convergence of visualization methods with World Wide Web tools.

36 Subdivision for Modeling and Animation

Subdivision is an algorithmic technique to generate smooth surfaces as a sequence of successively refined polyhedral meshes. Using subdivision, complex geometry can be manipulated and rendered very efficiently, making it a highly suitable tool for interactive animation and modeling systems. This course covers the basic ideas of subdivision and a variety of subdivision schemes.

Prerequisites

Facility with basic linear algebra and introductory calculus. Prior exposure to parametric representations of curves and surfaces, associated algorithms, and general computer graphics implementation is highly recommended.

Topics Covered

A number of different subdivision methods for surfaces and a variety of subdivision-based algorithms for modeling and animation, including adaptive evaluation, level-of-detail rendering, and manipulation.

37 Introduction to Programming in Java 3D

Java 3D, a new cross-platform API for developing 3D graphics applications in Java, is designed to enable quick development of complex 3D applications, and at the same time enable fast and efficient implementations on a variety of platforms, from PCs to workstations. Using Java 3D, software developers can build cross-platform applications that build 3D scenes programmatically, or via loading 3D content from VRML, OBJ, and/or other external files. The Java 3D API includes a rich feature set for building shapes, composing behaviors, interacting with the user, and controlling rendering details. In this course, participants learn the concepts behind Java 3D, the Java 3D class hierarchy, typical usage patterns, how to avoid common mistakes, animation and scene design techniques, and tricks for increasing performance and realism.

Prerequisites

Intermediate-level knowledge of Java programming and a beginning understanding of 3D graphics concepts. No advanced math background is required.

Topics Covered

Java 3D classes and methods for building 3D graphics applications, and low-level control of 3D rendering and viewing with head-mounted displays.

38 Immersive Environments: Research, Applications, and Magic

A multidisciplinary approach to how to make a wide range of immersive technologies useful. The challenge can best be met by importing knowledge and insights from disparate fields. Designers need to respect the biases and constraints of the human perceptual system. Similarly, application authors need to learn the principles of interactive design. This course is taught by perceptual scientists, designers, and authors who share an interest both in exploiting the advantages of immersive displays and in comparing immersive and desktop displays to improve desktop media.

Prerequisites

Attendees should have basic knowledge of using computer graphics for modeling and constructing environments. No prior knowledge of visual perception is assumed.

Topics Covered

Design and implementation of immersive systems, basic perceptual psychology, and why immersive systems “work.” Basics of interactive-technique design in immersive media, basics of interactive storytelling, and how to present information in immersive environments.

39 The Art of Disney's "Mulan"

Tuesday		
Beginning	Intermediate	Advanced
■	■	■

A glimpse into the artistic thought process for the use of CGI in Walt Disney Feature Animation's "Mulan." This course focuses on the unique considerations of integrating 3D computer graphics with traditional 2D animation, as presented by artistic leads and hands-on CGI artists. It does not dwell on the specific techniques for each element, but focuses instead on the artistic decisions that were made and the technical approaches that were devised to achieve the final result on screen.

Prerequisites

Basic knowledge of 3D computer graphics. The course is appropriate for anyone interested in feature animation, including artists, animators, modelers, and technical directors.

Topics Covered

The production pipeline at Walt Disney Feature Animation, shaders, modeling, and animation.

40 Compositing in the Digital Film Industry: Case Studies in Film Production

Tuesday		
Beginning	Intermediate	Advanced
■	■	■

Digital compositing is now a mature tool in today's production pipelines. Through presentations of real-world case studies by top digital artists, attendees see approaches to solving some of the more difficult problems encountered in recent films and gain valuable understanding of the complex techniques possible with current compositing systems.

Prerequisites

Familiarity with 2D imaging and compositing is highly recommended. This course is designed for people who want deeper knowledge of the use of compositing tools in today's film production environments.

Topics Covered

The complexities involved in the compositing process; production of top film project scenes, from the initial hand-off of elements to delivery of the final finished scene; how digital artists deal with difficult or tricky scenes; and an introduction to cutting-edge compositing tools and their extensive range of functionality.

41 How to Survive as a Computer Graphics Entrepreneur

Tuesday Half Day AM

Financial independence, individual glory, and taking charge of one's own destiny are common dreams in computer graphics. This course is designed specifically for those individual computer graphics artists, developers, and enthusiasts who might be thinking of starting and operating their own computer graphics business, and asking themselves "Can I survive as a computer graphics entrepreneur?" A small group of entrepreneurs who have launched their own ventures, faced the onslaught of banks, customers, computer vendors and governments, and lived to tell the tale describe their own experiences, then open up the session to questions from budding entrepreneurs.

Prerequisites

Aspirations to own a business. Familiarity with what is marketable in computer graphics and how it is priced is very helpful.

Topics Covered

The risks and demands of starting and operating one's own business, and a plentiful supply of proven survival techniques.

42 Parallel Graphics and Visualization Technology

Tuesday Half Day PM

Issues and challenges of incorporating parallelism into hardware and software rendering systems:

- *The development of parallel graphics technology and trends in high-performance graphics, notably PC graphics accelerators.*
- *State-of-the-art graphics hardware architectures and the parallelism in the software that uses them.*
- *Design of fully parallelized rendering systems, with emphasis on supporting parallel application codes and modern graphics libraries.*
- *Software rendering on massively parallel supercomputers.*

Prerequisites

A basic understanding of computer graphics and computer systems, and a strong interest in graphics hardware architectures, graphics software systems, and parallel rendering algorithms.

Topics Covered

Concepts and designs of parallel graphics pipelines and software architectures, texture systems, parallel graphics interfaces, parallel graphics libraries, frame buffers, load balancing, and parallel image compositing.

43 Digital Video: Algorithms and Interfaces

Digital video technology is no longer restricted to broadcast studios. It is available to practitioners of computer graphics, and it is converging – or colliding! – with mainstream computing. This course details the algorithms and interfaces used for high-quality digital video. It describes the sampling, quantization, and filtering that take place in high-quality digital video; the algorithms used for chroma subsampling, spatial resampling, deinterlacing, frame rate conversion, and other processes necessary to exchange digital video among broadcast, consumer, and computer graphics domains, and the digital video interfaces used in the broadcast studio.

Prerequisites

Some familiarity with digital video, no fear of mathematics, and detailed knowledge of image coding, perhaps gained by attending Color Image Coding (Course 25).

Topics Covered

The algorithms of sample rate conversion (in video, called interpolation) and spatial resampling.

Organizer

44 Digital Video: Motion JPEG, MPEG-2, DVC, and DVD

To record video, computer graphics professionals have long been faced with a dilemma: consumer-grade analog recording (with inferior picture quality), studio digital video equipment (which is very expensive), or software-based decompression on workstations or desktop computers (with the poor performance). Solutions to these dilemmas are at hand: Digital Video Cassette (DVC) and Digital Versatile Disc (DVD). DVC brings high-quality digital recording to computer graphics professionals. DVD offers high-performance and low-cost distribution of video. This course explains the Motion JPEG technology at the heart of DVC, and the MPEG-2 standard that is the basis of DVD coding.

Prerequisites

Detailed knowledge of image coding, as from Color Image Coding (Course 25) and familiarity with video technology as from Digital Video: Algorithms and Interfaces (Course 43).

Topics Covered

The quality that can be expected from MPEG at particular bit rates, cause and prevention of compression artifacts, quality considerations in MPEG encoding and decoding, how the implementation options of MPEG-2 address diverse applications, and the relationships among the JPEG, MPEG-1, H.261, and MPEG-2 standards.

45 Authoring Compelling and Efficient VRML97 Worlds

The knowledge required to make intelligent decisions about creating VRML97 content that runs efficiently on modern VRML97 browsers. The presenters explain the tradeoffs that authors need to make, present, and analyze real-world examples culled from their own development and those of their customers. Topics include measuring and predicting runtime performance, texture and sound techniques to minimize download without sacrificing performance or looks, using navigation aids to take the burden of 3D navigation off the user, and how VRML97 browsers optimize their rendering.

Prerequisites

An understanding of the fundamentals of the VRML node structure and recognition of the purpose if not the exact syntax of most VRML nodes.

Topics Covered

In-depth knowledge of the runtime tradeoffs that authoring decisions imply, what features of VRML97 to avoid due to ambiguities, and a new way to think about project workflow that will increase the likelihood of achieving performance goals.

46 Computer Graphics Beyond the Third Dimension

This advanced tutorial provides an intuitive connection between many standard 3D geometric concepts used in computer graphics and their higher-dimensional counterparts. It begins by answering frequently asked geometric questions whose resolution, though obvious in hindsight, may be obscure to those who have never ventured beyond the third dimension. It then develops methods for describing, transforming, interacting with, and displaying geometry in arbitrary dimensions. Several examples are directly relevant to ordinary 3D graphics, including the treatment of quaternion frames as 4D geometric objects and application of generalized lighting models to 3D volumetric density data reinterpreted as 4D elevation maps.

Prerequisites

Sophisticated understanding of analytic geometry and linear algebra, and familiarity with conventional mathematical methods of 3D computer graphics used in geometric transformations, polygon rendering, ray-tracing, and illumination models. Some knowledge of volume rendering is helpful.

Topics Covered

Basic methods of high-dimensional geometry as intuitive generalizations of 3D graphics techniques. Application of projection, normal determination, and generalized lighting to examples such as visualization of quaternions and 3D scalar fields.

Organizer and Lecturer

Andrew Hanson

Indiana University

Room 340 CD

Schedule

- 10:00 Formulas and techniques of N-dimensional geometry, proximity calculations, barycentric coordinates, and treating N-dimensional data points as geometry**
Hanson
- 10:45 Rotations in N-dimensions and natural interfaces for N-dimensional orientation control**
Hanson
- 11:00 Moving 3D frames as 4D quaternion differential equations, the Frenet and Bishop frame equations, visualizing quaternion frames as 4D geometric objects**
Hanson
- 11:30 Viewing 3D scalar fields as 4D elevation maps, display, virtual lighting, and interaction with $D \geq 4$ objects in 3D virtual reality environments**

papers/panels

SIGGRAPH 98 Papers: The premier international forum for the latest and most significant findings in computer graphics and interactive techniques. Papers are submitted for review by a committee of world-renowned experts in computer graphics. Each accepted paper is presented by the author(s) at SIGGRAPH 98 and printed in the field's premier archive, the SIGGRAPH Conference Proceedings.

SIGGRAPH 98 Panels: A highly interdisciplinary program that sparks animated discussions and provides thought-provoking insights from some of the top professionals in the interactive and graphics world. Panels explore the art and science of image and interface, and address the technical, practical, aesthetic, and social challenges that we face as we build the future into the next millennium. All SIGGRAPH 98 Panels will be simultaneously interpreted into Japanese.

SIGGRAPH 98 の全てのパネル討論は、日本語に同時 通訳されます。

After their presentations, authors and panelists move on to practical demonstrations in the Creative Applications Lab and informal discussions in the Session Breakout Lounge (Hall F Lobby).

keynote address/awards

Wednesday 22 July 8:15 - 9:45 am

Hall E 2

Jim Blinn, Graphics Fellow at Microsoft Research and recipient of the first SIGGRAPH Computer Graphics Achievement Award, surveys the computer graphics scene from his unique perspective as a scientist, engineer, artist, and author. Over the past 25 years, his contributions and achievements have exponentially expanded the horizons of computer graphics.

Immediately before the keynote, SIGGRAPH presents two awards:

- **Michael Cohen**, Microsoft Research, receives the 1998 Computer Graphics Achievement Award for his achievements in radiosity, constraint-based animation, shape design, image-based rendering, and realistic image synthesis.
- **Maxine Brown**, University of Illinois at Chicago, receives the first SIGGRAPH Outstanding Service Award for her many years of leadership on SIGGRAPH organization and conference committees, including chair of SIGGRAPH 92 (Chicago).

Visualization: The Hard Problems

Room F 3-5

For straightforward mapping to time-varying 3D geometry (weather simulation, for example), quite a few visualization tools and techniques are available. But for problems with high dimensionality, abstract quantities or relationships, or diverse kinds of information, visualization solutions remain elusive. These and other visualization issues are addressed by a panel representing a variety of pertinent disciplines: computer graphics, human factors, cognitive science, and the graphic arts. Panelists also present visualization solutions designed to solve these kinds of visualization problems.

Look Ma! Four Hands! New Models for Interacting with 3D Worlds

Room F 3 - 5

What is so hard about 3D interaction? What exactly is being done to improve the bandwidth of man-machine interface in 3D environments? The World Wide Web makes practical -- indeed necessary -- the development of code that will run everywhere. Thus real-time 3D environments are now more accessible than ever. This panel looks at practical solutions to the challenge of interfacing with these new 3D worlds, both in terms of hardware devices, and in terms of universal 3D file formats such as VRML 2.0 and JAVA 3D.

Out of the Box: Toys Break the Screen Barrier

Room F 3 - 5

Transmedia applications blur the line between physical play in the real world and virtual play in the digital world. Are these applications precursors to eventual integration of the computer into more aspects of daily life? As they distribute the play experience over different media, are they still considered "applications," or have they become "toys" in which the computer is now only part of the total experience? This panel of professionals who have begun to tackle these issues analyzes the theory and practice behind transmedia, and gives live demonstrations of transmedia products.

Feature FX: Money Pit or Gold Mine?

Room F 1 - 2

The effects industry was reborn in the late 1970s with the production of Star Wars. Since then, it has grown from one small company producing effects for George Lucas and his friends to a crowded and highly competitive business of approximately 20 companies competing for almost half a billion effects dollars in 1997. What are some of the growing pains that the big effects operations have experienced in the 80s and 90s, and how are they preparing for a healthy future?

Dis-Illusion of Life: Becoming a Digital Character Animator

Room F 3 - 5

Where are the new animators, and why are recruiters having such a hard time finding them? Now that mature digital tools are available to character animators, and as those tools become more sophisticated every year, this field is coming into its own. The market is ripe for talented digital character animators, but they are few and far between. Educators, animators, and industry trainers present widely divergent views, insights, and suggestions for animators, those who train animators, and anyone looking for employment in character animation.

Human Factors in Virtual World Design: Psychological and Sociological Considerations

Room F 1 - 2

This panel discusses strategies for graphical virtual world design in light of sociological and psychological human factors. The primary focus is on methods of successfully designing virtual worlds intended as social or community platforms, with special consideration of factors that may interfere with user commitment and social interaction.

Virtual Reality as Healing Art

Room F 3 - 5

How can we use virtual reality to heal ourselves – body, mind and soul? Could it be that virtual healing is the “killer app” of VR not because it kills, but because it heals? In its deepest promise and most profound practice, VR as both healing modality and visionary art form is a transformative technology with extraordinary power to make and keep us well. From classic vision to cutting-edge research, with real-world examples and real-time performance from the true pioneers of cyberspace healing, this panel looks at cyberspace as a healing place, avatar as anima, virtual reality as healing art.

Are You Here? Presence in Virtual Reality: What Is It All About and Why Care?

Room F 1-2

Virtual reality is supposed to provide a strong illusion of being and acting in a simulated "other place." Is this realisable? What is required to enable someone to be "present" in a virtual scenario? To what extent can this degree of presence be measured, if it exists at all? How does it relate to performance? Does any of this matter anyway to application builders or users? A multidisciplinary panel addresses these and related issues.

Behavioral Modeling and Animation: Past, Present, and Future

Room F 1-2

Only 10 years after it was introduced as an advanced technique for animating graphical characters, behavioral animation is now the foundation of sophisticated systems developed by recipients of technical, scientific, and engineering Academy Awards. This panel discusses the fundamentals of behavioral modeling and animation arising from our knowledge of living systems. It summarizes the state of the art from multiple perspectives, including production animation, the interactive games industry, and research. Is this the dawn of a new age of behavioral animation?

Is Robust Geometry Possible?

Room F 1-2

Since computers first calculated 2D and 3D geometry for design, modeling, animation, and visualization, implementors and users have been plagued by problems ranging from simple visual discrepancies (such as "cracks" between polygons) to strange program behavior, including outright crashes. Why is it so hard to correctly create and implement computer programs involving geometry, and what can be done to make geometric programs work correctly? This panel of industrial and academic experts expect lively discussion and strong challenges from the audience regarding the nature of the problem, the limits of existing methodologies, and radical proposals for new solutions.

Computer Vision in 3D Interactivity

Room F 3-5

Now that microprocessor clock rates exceed 300MHz, SIMD integer instructions are commonplace, and shared memory multiprocessing is available for under \$3,000, integration of computer vision with 3D graphics is more practical than ever before. Tracking the user's head, hands, body, and gestures could eliminate encumbering sensors. Another approach uses computer vision techniques to understand 3D structure and camera parameters in multi-view, image-based scenes and re-renders them as the user directs. Yet another uses animated characters that are aware of users and other characters. What will be the most compelling integration of computer vision with 3D graphics?

Ray Tracing and Radiosity: Ready For Production?

Room F 1-2

Ray tracing and radiosity are known as rendering techniques that produce the most realistic images possible in computer graphics. But to what extent are they being used for commercial production? What are the benefits and problems for companies who have tried to use them? This panel answers these questions with presentations and discussions by digital artists and companies that have actually implemented these rendering methods in their film and commercial work, and dissenting views from those working at the alternatives.

Another Fine Mesh

Chair **Hugues Hoppe**, Microsoft Research Room 224

Too Many Triangles

Wolfgang Seibold and Geoff Wyvill

Department of Computer Science
University of Otago
Box 56
Dunedin, NEW ZEALAND
geoff@rabbit.otago.ac.nz

In most triangle-mesh representations of curved surfaces, the triangle vertices lie on the surface. This sketch shows that, by relaxing this condition, the error of approximation can be halved.

Multiresolution of Arbitrary Triangular Meshes

Wei Xu and Don Fussell

Texas Institute of Computational and Applied Mathematics and Department of Computer Sciences
The University of Texas at Austin
Austin, Texas 78712 USA
wei@ticam.utexas.edu

A new method for multiresolution analysis of arbitrary triangular meshes using a new general subdivision scheme and a new type of wavelets based on the resulting subdivision trees.

Geometric Reconstruction with Anisotropic Alpha-Shapes

Michael Capps and Marek Teichmann

MIT Lab for Computer Science
545 Technology Square
NE43-242
Cambridge, Massachusetts
02139 USA
marekt@graphics.lcs.mit.edu

Two extensions (anisotropic scaling and density scaling) to alleviate problems with anisotropic alpha-shapes and allow reconstruction from a larger class of point sets.

Converting Sets of Polygons to Manifold Surfaces by Cutting and Stitching

Andre Gueziec, Gabriel Taubin, Francis Lazarus, William Horn

IBM T.J. Watson Research Center
P.O. Box 704
Yorktown Heights, New York
10598 USA
{gueziec,taubin,francis,horn-wp}@watson.ibm.com

Many real-world polygonal surfaces contain topological singularities (edges shared by more than two triangles, several triangle fans incident to a single vertex) that represent a challenge for processes such as simplification, compression, smoothing, etc. This automated algorithm removes such singularities, thus converting non-manifold sets of polygons to manifold polygonal surfaces (orientable, if necessary).

Wednesday 22 July 2:15 - 4 pm

Colliding, Caving & Coloring *Chair Andrew Glassner, Microsoft Research* Room 224

 virtual reality

Collision Detection Framework Using Model Simplification

Tiow-Seng Tan, Ket-Fah Chong, and Kok-Lim Low

National University of Singapore
Department of Information
Systems & Computer Science
Lower Kent Ridge Road
SINGAPORE 119260
tants@iscs.nus.edu.sg

A framework that automatically exploits output of a simplification algorithm to construct bounding volume hierarchies for collision detection. Preliminary experiments show very encouraging results.

Optimizing Stereo Video Formats for Projection Based Virtual Reality

Gary Lindahl, Tom DeFanti, Dan Sandin, Greg Dawe, and Maxine Brown

Electronic Visualization
Laboratory
University of Illinois at Chicago
851 South Morgan Street,
Room 1120
Chicago, Illinois 60607 USA
lindahl@icemt.iastate.edu, [tom|dan|dawe|maxine]@evl.uic.edu
www.evl.uic.edu

Many of today's high-end, projection-based virtual reality systems generate frame-interleaved video for stereoscopic equipment. Integrating LCD shutter glasses, high-end graphics computers, and large-scale projectors is difficult. This sketch identifies problems discovered as part of the VR efforts at the Electronic Visualization Laboratory and offers solutions.

3D Painting for Non-Photorealistic Rendering

Daniel Teece

Regent Court
211 Portobello Street
Sheffield S1 4DP
UNITED KINGDOM
dan@dcs.shef.ac.uk
www.dcs.shef.ac.uk/~dan/

The 3D Expressive Painter is an interactive, expressive 3D painting and rendering system intended for use in production of hand-drawn natural-media-style animations. By using some imported scene geometry, created in a general-purpose modeller, the system allows interactive placement of paint strokes in 3D. The user is able to rotate the scene, select a suitable viewing angle, and paint from the desired direction, with the depth values for the stroke positions calculated from the imported scene.

Visually Representing Multi-Valued Scientific Data Using Concepts from Painting

{dh,davidkremers,eta,avalos}@gg.caltech.edu
www.gg.caltech.edu/~dhl

Layers of varying brush strokes are used to visually represent 2D images of multi-valued scientific data. Example visualizations display up to eight values simultaneously so that they can be understood in context.

Wednesday 22 July 4:15 - 6 pm

 virtual reality

Reality ++ *Chair Chris Shaw, University of Regina* Room 224

 interaction

Star Cursors in Content Space: Abstractions of People and Places

P.J. Rankin

Philips Research Laboratories
Redhill, Surrey RH1 5HA
UNITED KINGDOM
rankin; clive; jack@prl.
research.philips.com

C. v Heerden, J. Mama, L. Nikolovska, R. den Otter, J. Rutgers,

Philips Design
Building HWD-3, P.O. Box 218
5600 MD Eindhoven
THE NETHERLANDS
l.nikolovska; r.otter;
j.rutgers@design.philips.com

A 3D multi-user virtual world supporting novel, abstract representations for content and users, coupled via models of users' profiles and their social context, is envisioned and illustrated by computer prototypes.

A 3D Stereo Window System for Virtual Environments

Michael A. Wingfield

The Mitre Corporation
202 Burlington Road
Bedford, Massachusetts 01730
USA
mwing@mitre.org

A 3D stereo window system is being developed for use in a virtual environment. The system allows users to create and interact with objects and scenes in multiple independent, overlapping workspaces.

Visorama: A Complete Virtual Panorama System

Andre Matos, Luiz Velho, Jonas Gomes, Andre Parente, Heloisa Siffert

Rua Duque Estrada 31 Apt. 606
Gavea
Rio de Janeiro, RJ
CEP 22451-090 BRAZIL
amatos@visgraf.impa.br

Visorama combines hardware and software components to provide a natural and immersive interaction with virtual panoramas. The system includes an authoring environment well suited for panorama-based virtual worlds.

Remote Reality Demonstration

Terrance E. Boulton

EECS Department
Lehigh University
19 Memorial Drive West
Bethlehem, Pennsylvania 18015
USA
tboulton@eeecs.lehigh.edu
www.eecs.lehigh.edu/~tboulton

Discussion/demonstration of a system that combines 360 x 210-degree field-of-view, full-motion video with frame-rate warping and a HMD to create a geometrically correct, model-free immersive environment.

Assisted Articulation of Closed Polygonal Models

Marek Teichmann and Seth Teller

Laboratory for Computer Science
Room NE43-242
Massachusetts Institute of Technology
545 Technology Square
Cambridge, Massachusetts
02139 USA
marekt@lcs.mit.edu

A system for automating the correspondence between skeletons and mesh models in articulation of models represented by polygonal meshes.

Dynamic Modeling of Human Hair and GUI Based Hair Style Designing System

Keisuke Kishi and Shigeo Morishima

Faculty of Engineering
Seikei University
3-3-1 Kichijoji-kitamachi
Musashino
Tokyo 180-0001 JAPAN
keisuke@ee.seikei.ac.jp, shigeo@ee.seikei.ac.jp

New methods for dynamic modeling of hair. GUI-based hair-editing tool helps to create any style by manipulating a tuft model. This sketch features a realistic animation of hair blowing in the wind.

Directing Physics

Stephen Chenney

EECS Computer Science
University of California at Berkeley
387 Soda Hall, Number 1776
Berkeley, California 94720 USA
schenney@cs.berkeley.edu

An extension of the traditional world model for physically based animations using a Markov chain Monte Carlo algorithm to sample animations that are both physically plausible and satisfy a director's constraints.

Faster Integration of the Equations of Motion

Breton M. Saunders

Computer Laboratory
University of Cambridge
Cambridge CB2 3QG
UNITED KINGDOM
bms20@cl.cam.ac.uk
www.cl.cam.ac.uk/users/bms20

Physical simulation techniques generate realistic motion at a computational price. This sketch examines ways of reducing that cost through the use of leapfrog methods.

Physics-Model-Based 3D Facial Image Reconstruction from Frontal Images Using Optical Flow

Shigeo Morishima, Takahiro Ishikawa, Demetri Terzopoulos

Seikei University
3-3-1 Kichijoji-kitamachi
Musashino
Tokyo 180 JAPAN
shigeo@ee.seikei.ac.jp
www.ee.seikei.ac.jp/user/shigeo/

Automatic estimation of facial muscle parameters from optical flow using a neural network. This technique corresponds to 3D facial motion tracking from a 2D image under the physics-model-based constraint.

Vector Field Comparisons Using Earth Mover's Distance

Yingmei Lavin, Rajesh Batra, Lambertus Hesselink

Stanford University
143A Escondido Village
Stanford, California 94305 USA
yingmei@kaos.stanford.edu
raj@kaos.stanford.edu
bert@kaos.stanford.edu

A method for computing a quantitative measure of the closeness between vector fields. The method produces feature descriptions that allow for comparisons of vector fields.

Measuring Volumetric Coherence

Yuriko Takeshima Issei Fujishiro

Ochanomizu University
Tokyo 112-0012 JAPAN
yuriko@imvis.ocha.ac.jp

In order to achieve a time-critical environment for indirect volume visualization, a cogent measure of the volumetric coherence is devised on the basis of well-known, second-order, gray-level statistics for 2D textures.

Artificial Evolution of Implicit Surfaces

Edward J. Bedwell and David S. Ebert

Computer Science and Electrical Engineering Department
University of Maryland Baltimore County
1000 Hilltop Circle
Baltimore, Maryland 21250 USA
ebedwe@cs.umbc.edu

A system that combines implicit surfaces, as modeling primitives, with genetic programming to facilitate automated generation of exceedingly complex models.

A Progressive Global Illumination Solution Considering Perceptual Factors

Vladimir Volevich, Karol Myszkowski, Andrei Khodulev, Edward A. Kopylov
Russian Academy of Sciences

Karol Myszkowski
The University of Aizu
k-myszk@u-aizu.ac.jp
www.u-aizu.ac.jp/~k-myszk/progress

Jerzy Sas
Technical University of Wroclaw

A high-speed, progressive global illumination solution for complex environments combines stochastic and deterministic techniques, and utilizes perceptually-based tuning of simulation parameters.

Visibility Driven Hierarchical Radiosity

Fredo Durand, George Drettakis, Claude Puech
iMAGIS/ GRAVIR-IMAG
BP 53
38041 Grenoble Cedex 09
FRANCE
[Fredo.Durand|George.Drettakis|Claude.Puech]@imag.fr
www-imagis.imag.fr/

A novel visibility driven hierarchical radiosity algorithm that uses an extended skeleton to compute accurate visibility at vertices, to insert important discontinuities, and to effect an efficient refinement strategy. The method uses hierarchical triangulations and introduces a novel push-pull procedure for accurate display.

Radiance Maps: An Image-Based Approach to Global Illumination

Philipp Slusallek, Wolfgang Heidrich, Hans-Peter Seidel
Universität Erlangen
Computer Graphics Group
Am Weichselgarten 9
D-91058 Erlangen, GERMANY
slusallek@informatik.uni-erlangen.de
www9.informatik.uni-erlangen.de/Persons/Slusallek

A new image-based approach to global illumination that is designed to explicitly make use of coherence in the radiance field of a scene.

Interactive Modification of Real and Virtual Lights for Augmented Reality

Celine Loscos, George Drettakis and Luc Robert
iMAGIS/GRAVIR-IMAG
BP 53
38041 Grenoble Cedex 09,
FRANCE
Celine.Loscos@imag.fr
www-imagis.imag.fr/

A new method to allow interactive modification of real light sources for augmented reality. Real light shadows are removed from captured textures, and a modified interactive radiosity system is used.

Cool Shades

Chair **David S. Ebert**, University of Maryland Baltimore County Room 224

 animation & FX

Fast Multi-Layer Fog

Justin Legakis

Computer Graphics Group
Laboratory for Computer Science
Massachusetts Institute of
Technology
legakis@mit.edu
graphics.lcs.mit.edu/~legakis

The standard uniform-density fog model is extended to fog that varies as a function of height. The computation is still performed in constant time, independent of the complexity of the density function.

 rendering

A Model for Anisotropic Reflections in Open GL

Wolfgang Heidrich

Computer Graphics Group
Universität Erlangen
Am Weichselgarten 9
91058 Erlangen, GERMANY
heidrich@informatik.uni-erlangen.de

A novel approach for simulating anisotropic reflections on OpenGL-based hardware in real time. Rendering of anisotropic surfaces with one light source is as expensive as traditional texturing and lighting.

 rendering

Quadratic Interpolation for Near-Phong Quality Shading

Larry Seiler

Mitsubishi Electric ITA
seiler@merl.com
www.merl.com/people/seiler

Rendering hardware can easily compute coefficients for a second-order shading functions. This is more efficient than per-pixel Phong shading or Gouraud shading with triangle subdivision at equivalent quality.

 modeling

Editing 3D Objects without 3D Geometry

Rui Yamada
Mitsuhari Ohki

Hashimoto Signal Processing Lab
Media Processing Lab
Sony Corporation
6-7-35, Kitashinagawa
Shinagawa-ku
Tokyo, JAPAN
rui@av.crl.sony.co.jp

Given a single-source image, this system can perform 3D manipulations directly onto objects in the image without explicitly recovering the underlying 3D geometry.

Natural Causes

Chair **Rick Parent**, The Ohio State University Room 224

Procedural Field Grasses

Lee A. Butler

Attn: AMSRL-SL-BV
U.S. Army Research Laboratory
Aberdeen Proving Ground,
Maryland 21005-5068 USA
butler@arl.mil

David S. Ebert

University of Maryland Baltimore County

A method for generating large fields of grasses. The procedural techniques achieve substantial savings in storage space, modeling, and animation effort.

Modeling Fiber Stream of Internal Wood

Naoki Kawai

Communication & Information
Laboratory
Dai Nippon Printing Co., Ltd.
kawai@lab.cio.dnp.co.jp

"Figure" is one of the most obvious features of wood surfaces. It's caused by the cross grain, a fiber stream of internal wood. We introduce a modeling method of cross grain and render the figure.

Botanical Tree Structure Modeling Based on Real Image Set

Tatsumi Sakaguchi

ATR Media Integration &
Communications Research
Laboratories
tatsu@mic.atr.co.jp
www.mic.atr.co.jp/~tatsu/

Form and branch structures of a botanical tree are reconstructed from real images. The technique is an easy way to model an existing tree in a natural scene.

A Particle System for the Direct Synthesis of Landscapes and Textures

Argiris A. Kranidiotis

University Of Athens
Alex. Panagouli 32
Keratsini 187 56 GREECE
akra@di.uoa.gr

A new fast method for generation of landscape images and textures. A particle system following simple rules generates images that give the illusion of a 3D model, although images are generated directly in 2D space.

Plane-Shape Perception Using Point-Contact Type Force Feedback Device

Juli Yamashita, Yukio Fukui, Osamu Morikawa
National Institute of Bioscience and Human Technology
Tsukuba 305-8566 JAPAN
{ juli | fukui | ycai | morikawa }@nibh.go.jp

Robert W. Lindeman
Department of EE & CS
The George Washington University
Washington, DC 20052 USA
gogo@seas.gwu.edu

Cai Yi
Japan Science and Technology Corporation

Although haptic rendering requires a high control rate (~kHz), modeling and simulation processes are much slower and can provide only discrete shape information. Haptic interpolation of such discrete shape fragments is thus vital. Our experiment on haptic thresholds in static plane-shape recognition gives useful results for interpolation algorithm design.

A Psychophysical Study on Human Perception of Surface

Mikio Shinya
NTT Human Interface Laboratories
shinya@nttcvg.hil.ntt.co.jp

Shin'ya Nishida
NTT Basic Research Laboratories
nishida@apollo3.brl.ntt.co.jp

Human perception of surface reflectance properties is psychophysically examined, and the experimental results suggest that the perception is based on image features rather than the reflectance distribution itself.

The Analysis and Visualization of Metamorphopsia through 3D Scene Regeneration

Peter Presti, Stephen Sinclair, Amit Gupta
Interactive Media Technology Center
Georgia Institute of Technology
Atlanta, Georgia 30332 USA
peter.presti@oip.gatech.edu

Metamorphopsia is a vision disorder that transforms one's environment into an Escher-like world of fluctuating shapes and double vision. MAVES quantifies and visualizes metamorphopsia through 2D warping and 3D animation.

The Use of Distortion for Special Venue Films

Toshi Kato, Keith Goldfarb, Bob Powell
Rhythm & Hues Studios
5404 Jandy Place
Los Angeles, California 90066 USA
bpowell@rhythm.com

This sketch discusses three Rhythm & Hues projects that used image-distortion for special venue ride films, so that when the animation is projected, it appears undistorted to the viewer.

Wednesday 22 July 10:30 am - 12:15 pm

Mixing the Real and the Synthetic

Chair **Gabriel Taubin, IBM T.J. Watson Research**

Room 414 CD

 synthetic actors

Hairstyle Simulation System

Kazunori Miyata

Department of Imaging Art, Faculty of Arts
Tokyo Institute of Polytechnics
2-9-5 Honcho, Nakano-ku
Tokyo, 164-8678 JAPAN
miyata@img.t-kougei.ac.jp

A hairstyle simulation system that automatically fits a stored hairstyle image to a captured face image. The target hairstyle image is adjusted in accordance with face-feature data and is then transformed by an image-warping operation to fit the face image.

Panned/Zoomed Landscape Video Sequences Compositing with Computer-Generated Still Images

Eihachiro Nakamae

Faculty of Engineering
Hiroshima Institute of Technology
2-1-1 Miyake, Saeki-ku
Hiroshima 731-5193 JAPAN
nakamae@cc.it-hiroshima.ac.jp

Xueying Qin and Guofang Jiao
Sanei Co.

Przemyslaw Rokita

Warsaw University of Technology

Katsumi Tadamura

Yamaguchi University

Yuji Usagawa

Chugoku Electric Power Co.

This sketch presents panned/zoomed landscape video sequence images that are well matched with photorealistic computer-generated still images of large-scale constructions by considering camera distortion and a TV interlaced-scanning system.

 synthetic actors

Virtual Stage: An Interactive 3D Karaoke System

KeeChang Lee, ChangWhan Sul, SungJoon Hur, KwangYun Wahn

KAIST
373-1 Kusung-Dong, Yusong-Gu
Taejeon 305-701 KOREA
lkc@vr.kaist.ac.kr

Virtual Stage is an extended karaoke system based on virtual reality technology. Participants sing along to the song and interact with the virtual characters in a virtual environment.

Wednesday 22 July 2:15 - 4 pm

Exploration Chair **Jeff Vroom, Art Technology Group** Room 414 CD

Studying Sculpture with a Digital Model: Understanding Michelangelo's Pietà of the Cathedral

Fausto Bernardini, Joshua Mittleman, Holly Rushmeier, Gabriel Taubin

IBM T.J. Watson Research Center
30 Saw Mill River Road
Yorktown Heights, New York
10598 USA
holly@watson.ibm.com

Jack Wasserman
Temple University

Scanning of a large, complex statue to produce a high-quality 3D model to allow art historians to study large- and small-scale features in otherwise impossible ways.

A Hierarchical Focus & Context Method for Image Browsing

Lars Erik Holmquist and Staffan Bjork

Viktoria Research Institute
Box 605
S-405 30 Gothenburg,
SWEDEN
{leh,bjork}@informatics.gu.se/
www.viktoria.informatics.gu.se/

A method for browsing hierarchically ordered image collections. The application allows users to examine an image in detail while simultaneously keeping an overview of the whole set.

 virtual reality

Time Travels in Virtual Landscapes

Ingo Braun, Anja Kutzner
Kulturbox GmbH

Birgit Böhme, Uta Simmons
Centre for Berlin Studies

Askan Striepe, Christian Quintus
Fraunhofer Institute for
Production Systems and Design
Technology

Andreas Knoche, Leonie Schäfer
Technical University of Berlin
info@zeitreisen.de

Development of a four-dimensional multimedia information system. An historical landscape offers a space- and-time-related entry to information on historical subjects.

 virtual reality

Smithsonian without Walls

Thomas Mueller, Marcelo Ronchini

razorfish inc.
324 Pearl Street #3A
New York, New York 10038 USA
thomas@razorfish.com

Razorfish developed Revealing Things, the Smithsonian's first Web-based exhibit. Through unique navigation, the exhibit showcases objects that reveal their owners' stories and cultures, and the meanings they associate with their possessions.

Wednesday 22 July 4:15 - 6 pm

 virtual reality

Training and Simulation Chair **Marc Kessler, University of Michigan** Room 414 CD

Applying Depth-of-Field Effects to Power Substation Simulation System Using Virtual Reality Technique

Koichi Arai and Shigenobu Furuta

The Kansai Electric Power Co., Inc.
arai@rdd.kepco.co.jp
sfuruta@rdd.kepco.co.jp

Arata Watanabe and Noboru Kamizi

Toyo Information Systems Co., Ltd.
9-1, Toyotsu-cho, Suita
Osaka, 564-0051 JAPAN
arata@karl.tis.co.jp
kamizi@hp99.tis.co.jp

This experimental study was conducted to apply depth-of-field effects techniques to an indoor distribution substation simulation system in an attempt to improve the sense of distance.

Coupled Models for Visualizing Respiratory Mechanics

Jonathan M. Kaye, Dimitris N. Metaxas, Frank P. Primiano, Jr.

University of Pennsylvania
200 South 33rd Street
Philadelphia, Pennsylvania 19104 USA
kaye@linc.cis.upenn.edu
www.cis.upenn.edu/~kaye/research.html

An interactive virtual environment for simulating cardiopulmonary mechanics. The environment integrates 3D anatomy reconstructed from CT scans with novel mechanical models of physiology.

Language through Gesture in a VRML World

Sarah Geitz, Chae-hi Park, Diane Brentari

Purdue University
West Lafayette, Indiana 47906 USA
sgeitz@tech.purdue.edu

Stephen Maher

NASA/Goddard Space Flight Center
Greenbelt, Maryland USA
maher@holodeck.gsfc.nasa.gov

This sketch evaluates the visual clues required to communicate linguistic meaning through gesture in an interactive environment. It reviews the results of human testing of two avatars designed to teach American Sign Language in a VRML-based world.

applications sketches

Internal Representation by the Magic Light

Seiki Inoue

ATR Media Integration & Communications Research Laboratories
2-2 Hikaridai, Seika-cho Soraku-gun
Kyoto 619-0288 JAPAN
sinoue@mic.atr.co.jp

We propose a new method for representing three-dimensional objects. When observers turn the spotlight on an object in a monitor, they can see inside the object.

The Making of Black-Hole and Nebula Clouds for the Motion Picture "Sphere" with Volumetric Rendering and the F-Rep of Solids

Gokhan Kisacikoglu

Cinesite Digital Studios
1017 North Las Palmas
Los Angeles, California 90038 USA
kisa@cinesite.com

This fly-through sequence of a massive nebular gas cloud was created for "Sphere" using volume rendering of implicit surfaces to represent solid gas clouds with stars.

Web-Based Sonification of Space Science Data

Robert M. Candey and Ramona L. Kessel

NASA Goddard Space Flight Center
Code 632, Building 26
Room 126
Greenbelt, Maryland 20770 USA
Robert.M.Candey@gssc.nasa.gov
cdaweb.gsfc.nasa.gov/

Justin R. Plue

Eleanor Roosevelt High School
7601 Hanover Parkway
Greenbelt, Maryland 20770 USA
plue@nssdc.gsfc.nasa.gov

Adding sonification capability (display data as sounds) to the CDAWeb space science data browsing system.

Lagrangian Visualization of Natural Convection Mixing Flows

Luis M. de la Cruz, Victor Godoy, Eduardo Ramos

Universidad Nacional Autonoma de Mexico
Circuito Exterior de C.U.,
Coyoacan, C.P. 04510
Mexico D.F., MEXICO
lmd@labvis.unam.mx
victor@labvis.unam.mx
erm@ds5000.super.unam.mx

An example of complex natural-convection flow analysis using Lagrangian tracking and sophisticated graphic techniques.

Thursday 23 July 2:15 - 4 pm

Production

Chair Kurt Fleischer, Pixar

Room 414 CD

 modeling

 animation & FX

TVML (TV Program Making Language)

Masaki Hayashi

Multimedia Services Research Division
NHK Science and Technical Research
Laboratories
1-10-11, Kinuta, Setagaya-ku,
Tokyo 157 JAPAN
hayashi@strl.nhk.or.jp

This sketch reports on software called TVML Player that can produce full TV programs in real time by interpreting a script written with TVML, a newly designed description language.

DView

Patti Koenig

Jet Propulsion Laboratory
5849 Buena Vista Terrace
Los Angeles, California 90042 USA
koenig@helios.jpl.nasa.gov
dview.jpl.nasa.gov

A multi-platform, language-independent 3D modeling and animation system with VRML compatibility that is easily integrated with languages including TCL.

Previsualization for "Starship Troopers:" Managing Complexity in Motion Control

Colin Green

Pixel Liberation Front
1316 1/2 Abbot Kinney Boulevard
Venice, California 90291 USA
colin@thefront.com

How computer-based previsualization tools were used to accurately design, plan, and execute "Starship Troopers" visual effects scenes involving numerous motion control set-ups and hundreds of miniatures.

Thursday 23 July 4:15 - 6 pm

 virtual reality

Emerging Technologies

Chair Dave Zeltzer, Sarnoff Corporation

Room 414 CD

Virtual Fishtank

Henry Kaufman, Brian Knep, Aubrey O. Francois, Tinsley A. Galyean, Stacy Koumbis

Nearlife, Inc.
147 Sherman Street, Suite 102
Cambridge, Massachusetts 02140 USA
henry@nearlife.com
www.nearlife.com
www.tcm.com

The Virtual Fishtank is a large, real-time 3D exhibit that immerses visitors in a fanciful undersea world where they create and interact with fish while learning about emergent behavior.

Solve et Coagula: Mating Man and Machine

Stahl Stenslie

c/o Telenor R&D
Instituttveien 23
2007 Kjeller, NORWAY
stahl@rosa.nta.no
televr.fou.telenor.no/stahl/isec

Solve et Coagula is primarily an attempt to give birth to a new life form: half digital, half organic. Through a multisensorial, full-duplex sensory interface, the installation networks the human with an emotional, sensing and artificially intelligent creature.

Diorama

Karrie Karahalios

Massachusetts Institute of Technology
20 Ames Street, e15-466
Cambridge, Massachusetts 02139 USA
kkarahal@media.mit.edu

Diorama is an augmented-reality project in which virtual 3D objects are placed in real-world environments. The goal is to create a system that allows people to build an imaginative parallel universe superimposed on their everyday space.

Wednesday 22 July 10:30 am - 12:15 pm

Group Sex and Other Collaborative Efforts

Chair **Sara Diamond, Banff Centre for the Arts**

Room 414 AB

Exquisite Fun: A Digital Sketchbook

Peggy Reinecke
10314 Rockbrook Road
Omaha, Nebraska 68124 USA
pardfa@home.com

Rebecca Hermann
5610 Hickory Street
Omaha, Nebraska 68106 USA
jmbbah@aol.com

An ongoing three-year-old collaboration between two artists using computers to develop imagery stored on a shared disk. This source material outputs in formats ranging from traditional art show to garden installation.

Electronic Remapping: Body Augmentation in the Electronic Age

Bill Hill
Florida Southern College
9506 Waterford Road
Jacksonville, Florida 32217 USA
hill@wwc.edu

As our collective culture and physical bodies coalesce with technology there is an essential and traumatic remapping of our psychological networks. Two recent electronic installations by Bill Hill.

Interactive Poem

Naoko Tosa
ATR Advanced
Telecommunications Research Lab
2-2 Hikaridai, Seika-cho, Soraku gun
619-02 Kyoto, JAPAN
tosa@mic.atr.co.jp
www.mic.atr.co.jp/~tosa

Through the process of exchanging words between a computer poet and humans, Interactive Poem allows the user to build an improvised poem filled with inspiration.

Virtual Scenery in Broadcast Television: The Time 100 Project at CBS Television

Ann Latham Cudworth
CBS Design and Production
530 West 57th Street, Room LE-2
New York, New York 10019 USA
ACDesigns@compuserve.com

Integration and collaboration of real-time scenery development and broadcast television production in the CBS News/Time 100 Project.

Wednesday 22 July 2:15 - 4 pm

Hyperformance

Chair **Diana Gromala, University of Washington**

Room 414 AB

It/I: Theater with an Automatic and Reactive Computer Graphics Character

Claudio Pinhanez and Aaron Bobick
Massachusetts Institute of Technology
20 Ames Street
Room E15-368C
Cambridge, Massachusetts 02139 USA
iti@media.mit.edu
www.media.mit.edu/~iti

"It/I" is an experimental play featuring a computer graphics character projected on screens. The character uses computer vision to recognize and react to the actions of the human actor.

Designing with Words: a Model for a Design Language in a MOO

Anna Cicognani
University of Sydney
anna@arch.usyd.edu.au

Design in text-based virtual worlds can be approached from a linguistic perspective. A model for a design language shows how words perform in these environments. This sketch presents a new scenario for design.

Developing the Interactive First Person P.O.V.: Using Characters as a Sensory Lens

Ella Tallyn and John F. Meech
Hewlett Packard Laboratories
Filton Road
Stoke Gifford
Bristol BS7 9JZ
UNITED KINGDOM
ella@hplb.hpl.hp.com

This technique gives participants a close relationship with complex story characters by presenting a scene from directable first-person points of view, which illustrate the characters' physical and emotional perspectives.

Personal Computers as Performance Instruments

Lucia Grossberger-Morales
103 Natoma #5
Santa Barbara, California 93101 USA
llucia@well.com

Performance art, by its nature, is more experimental and focuses on smaller audiences than traditional theater. Because they are widely available with accessible software, personal computers have the potential to be powerful tools in performance art.

Digitarama

Takehiko Nagakura

Massachusetts Institute of Technology
takehiko@mit.edu

Digitarama was designed to interactively display architectural form in multiple projections, to operate in response to the viewer's physical action, and to expose and visualize its mechanical principles for intuitive comprehension.

Las Meninas: The Articulation of Vision

Hisham Bizri

Electronic Visualization Lab
University of Illinois at Chicago
851 South Morgan Street, Room 1120 SEO
Chicago, Illinois 60607 USA
bizri@evl.uic.edu

Las Meninas is a virtual reality artwork that investigates the enigmatic nature of representation in VR. Vision is no longer fixed on a vanishing point but is now dispersed over multiple planes of form, function, and subjective meaning.

Gestalt Inhibition Sequence: Digital Hypnosis

Andy McIntire

1449 South Milledge Avenue
Athens, Georgia 30605 USA
amcintire@mindspring.com
www.mindspring.com/~amcintire/gest.html

Visualization of a proposed method of psychological immersion into virtual environments using audio-visual wave sequencing linked to biofeedback.

Wednesday 22 July 10:30 am - 12:15 pm

animation & FX

Lizards & Liners

Chair **Jonathan Luskin, Independent**

Room 330 DEFG

Titanic and Digital Character Animation

Daniel Loeb and Andre Bustanoby

Digital Domain
300 Rose Avenue
Venice, California 90291 USA
bhoffman@d2.com

Digital character animation was a primary accomplishment of the visual effects created for "Titanic." The work integrated performance capture and "rotocapture" as the basis of digital extras and digital stunt people.

Wiring Cracker: The Mechanics of a Non-Anthropomorphic, Real-Time, Performance Animation Puppet

Mike Morasky

Protozoa, Inc.
2727 Mariposa, Studio 100
San Francisco, California 94110 USA
mike@protozoa.com

The dark art of "wiring" exposed: creative mapping techniques used to construct an expressively versatile, non-humanoid, real-time performance animation monster.

Wednesday 22 July 2:15 - 4 pm

animation & FX

Bugs 'n Space

Chair **Joshua Pines, Industrial Light & Magic**

Room 330 DEFG

Starship Troopers

Craig Hayes

Tippett Studio
2741 10th Street
Berkeley, California 94710 USA
craig@tippett.com

In its first large-scale foray into all-CG production, Tippett Studio relied exclusively on computer-graphic technologies to model, animate, light, and composite 225 digital bug shots, some with thousands of bugs.

Starship Troopers

Walt Hyneman

Sony Pictures Imageworks
walt@spimageworks.com

Execution of the major battle sequences and establishment of the Starship fleet's presence as air cover and troop transport involved creation of 122 visual effects shots and utilized thousands of elements and a vast combination of techniques including digital composites, scale models, pyrotechnics, stop-motion animation, practical elements and in-camera effects enhanced, expanded, and supported by digital animation, compositing, and model work.

The PDI Crowd System for ANTZ

Luca Prasso, Juan Buhler, Jonathan Gibbs

Pacific Data Images
3101 Park Boulevard
Palo Alto, California 94306 USA
prasso@pdi.com

The computer graphics techniques used in the production of crowd sequences in the upcoming feature film "ANTZ" co-produced by PDI and DreamWorks SKG.

Wednesday 22 July 4:15 - 6 pm

animation & FX

2D/3D Toons

Chair **Jonathan Luskin, Independent**

Room 330 DEFG

Pontiac Coyote

Indira Guerrieri and Izzy Acar

Industrial Light & Magic

Wile E. Coyote pursuing Road Runner in a Pontiac? When animators at ILM and Warner Bros. team up, sparks fly, wheels spin, and Wile ... almost ... gets his prize!

Coca-Cola Factory

George Evelyn

Colossal Pictures

Chuck Gammage

Chuck Gammage Animation

Jerry van de Beek

Little Fluffy Clouds
Pier 29 Annex
San Francisco, California 94111 USA
betsy@littlefluffyclouds.com

Harmonious integration between cel and digital animation recreating the "Rubber Hose" style of the jazz age.

CPU

Wayne Gilbert

Lucas Digital
48 Magnolia Avenue
San Anselmo, California 94960 USA
wayne@lucasdigital.com

An ill-prepared artist experiences many frustrations in producing work and when you add to the mix the "ever-cooperative" computer, it's enough to make anyone plan properly.

Loose and Sketchy Animation

Cassidy J. Curtis

University of Washington
Box 352350
Seattle, Washington 98195 USA
cassidy@cs.washington.edu

An animator presents a fast, easily implemented, non-photorealistic filter for animation that can convert any 3D scene into a loose, gestural drawing, using stochastic, physically based particle systems.

Thursday 23 July 10:30 am - 12:15 pm

Invisible Effects

Chair **Stephen Rosenbaum, Sony Pictures Imageworks**

Room 330 DEFG

Matte Painting in the Digital Age

Craig Barron

Matte World Digital
24 Digital Drive, #6
Novato, California 94949 USA
cbarron@matteworld.com
www.matteworld.com

Traditional matte paintings have been an important visual effects technique since the turn of the century. Computer graphics can now be used to generate whole 3D environments, giving film makers even greater flexibility to turn their vision into reality.

Hard Rain: A Journey from Title to Story

Brad Kuehn

Cinesite Digital Studios
1017 North Las Palmas Avenue
Los Angeles California 90038 USA
jill@cinesite.com

At 4,997 frames in length, the opening sequence from "Hard Rain" shows how computer graphics can add possibilities to film and jettison you into a story, leaving you clueless as to where the real ends and the fake begins.

Computing Procedural Soundtracks from Animation Data

Robin Bargar, Alex Betts, Insook Choi

National Center for Supercomputing Applications
University of Illinois at Urbana-Champaign
Urbana, Illinois 61801 USA
rbargar@ncsa.uiuc.edu

Principles of procedural animation are applied to generate soundtracks that are impractical or impossible to create by hand. This sketch demonstrates sound authoring of data-driven synchronous animation soundtracks in real time and non-real time.

Thursday 23 July 4:15 - 6 pm

 animation & FX

It's Character, Stupid!

Chair **Andrew Schmidt, Pixar**

Room 330 DEFG

ImageTimer: A Traditional Approach to 3D Character Animation

Michael Blum, Nhi Casey, Greg Heflin

Walt Disney Feature Animation
500 South Buena Vista Street
Burbank, California 91521 USA
mikeb@fa.disney.com
nhic@fa.disney.com
gregh@fa.disney.com

ImageTimer is a combination of tools that allow a computer animator to change the timing of key frames in an animation package by adjusting the spacing and order of images recorded at those key frames.

The PDI Facial Animation System for ANTZ

Dick Walsh and Beth Hofer

Pacific Data Images
3101 Park Boulevard
Palo Alto, California 94306 USA
beth@pdi.com

The facial animation issues encountered on "ANTZ," the feature film co-produced by PDI and DreamWorks SKG and the muscle-based approach developed to meet these challenges.

The StormRiders Feature Film

Mike Wong

Centro Digital Pictures LTD
601 HKITC
72 Tat Chee Avenue
Kowloon Tong, HONG KONG
mikool@centro.com.hk

Based on Hong Kong's best-selling super hero comic book, The StormRiders is Hong Kong's first feature film that utilizes elaborate digital visual effects, such as digitally created sets, supernatural phenomena, and mythical creatures.

Flubber

Tom Bertino

Industrial Light & Magic

Let's get this straight. It has no face, no dialogue, and its only dependable physical characteristic is that it doesn't have one. And you want it to ACT? Sounds impossible. Sign us up.

animation sketches

educators program

Educators at all levels (K-12 through university) discuss and explore how they teach computer graphics or use computer graphics to teach science, math, the arts, social science, language skills, and history. The Electronic Schoolhouse is a hands-on exhibit area where teachers demonstrate innovative applications of computer graphics.

Educators Lounge (Room 331)

Monday - Friday 9 am - 5 pm

The Educators Lounge, a quiet place to get away from the noise and commotion of the conference, provides a message board and a limited number of computers for Web surfing and idea exchange.

Location

Room 340 AB
Room 340 CD
Room 331

Days

Thursday 23 July
Friday 24 July

Hours

9 am - 6 pm
8:30 am - 4 pm

Educators Program Chair

Scott Grissom

University of Illinois at Springfield

Administrative Assistant

Ann Cole

Educators Program Committee

Chris Carey

Orange County Public Schools

Jodi Giroux

The Allen-Stevenson School

Mk Haley

Walt Disney Imagineering

Opening Session

Room 340 AB
Thursday 9 - 10 am

Using Computer Graphics to Unleash Creativity in the Classroom

Randy Pausch Carnegie Mellon University

Randy Pausch, associate professor of computer science, human-computer interaction and design at Carnegie Mellon, was a National Science Foundation Presidential Young Investigator and a Lilly Foundation Teaching Fellow.

Papers

Room 340 AB
Thursday 10:30 am - 12:15 pm
Chair: **Dena Elisabeth Eber** Bowling Green State University

The K-12 Classroom

Illinois Chickscope: Using Emerging Technology to Promote Professional Development and Inquiry-Based Learning in the K-12 Classroom

Daniel E. Weber, Barbara Mason Fossum, C. Bertram Bruce, Umesh Thakkar, Clinton S. Potter, Janet Sinn-Hanlon
National Center for Supercomputer Applications

How the Internet is used in the classroom to provide a learning collaboratory where students and teachers explore development of a chicken embryo by evaluating magnetic resonance images.

How to Get Web Presents! Designing a Collaborative K-12 Web Project

June Julian New York University

Using a world community of old trees as an example, this project presents methods for K-12 teachers and students to design, maintain, and evaluate their own collaborative project for the World Wide Web.

Improving Instruction and Staff Development by Building K-12/University Partnerships

Brian D. Monahan North Rockland School District

Rodney Zagury New York Institute of Technology

This partnership has created innovative ways of teaching and learning about the use of graphics in education.

Panel

Room 340 CD
Thursday 10:30 am - 12:15 pm

Collaborations in Higher Education

Andrea Polli Robert Morris College

Mary Murphy The Chicago Cultural Center

Thomas Fowler, IV California Polytechnic State University

Neil B. Rolnick, Branda Miller Rensselaer Polytechnic Institute

Innovative educators from varied disciplines including media and sound arts, architecture, and performance/installation discuss successful collaborations among students and cultural institutions, industry, other schools, and professional artists.

Electronic Schoolhouse

Room 331
Thursday 10:30 am - 12:15 pm

Desktop Publishing: An Online Distance Learning Course

Elizabeth A. Hornak

Rochester Institute of Technology

An online course that covers desktop publishing and the basics of design.

Papers

Room 340 CD
Thursday 2:15 - 4 pm
Chair: **Mk Haley** Walt Disney Imagineering

Teaching Science and Mathematics

The Physics 2000 Project: Interactive Physics on the World Wide Web

Martin V. Goldman, David Rea

University of Colorado at Boulder

An innovative interactive Web site (www.colorado.edu/physics/2000) designed to make modern physics and technology accessible to K-12 students, college students, and the general public.

The Ceren Web Resource: Enabling Students to Become Anthropologists in a Virtual Site

Jen Lewin, Mark Ehrhardt, Mark D. Gross

University of Colorado at Denver

An interesting, informative, and interactive Web learning resource on Ceren, an ancient agricultural village in Western El Salvador that was buried by volcanic ash over 1,400 years ago.

An Interactive Course on Fractals and Chaos

Cary Laxer, Aaron Klebanoff Rose-Hulman Institute of Technology

A team-taught course in which students interact with software to learn fractals and chaos.

Panel

Room 340 AB
Thursday 2:15 - 4 pm

Reading, Writing, Reload: New Three Rs for a New Millennium

Sarah Feldman, Anthony Chapman Thirteen/WNET

Henry Bar-Levav OVEN Digital

Aliza Sherman Cybergrll Internet Media

How digital media can be strategically developed, and creatively used, to instigate learning.

Electronic Schoolhouse

Room 331
Thursday 2:15 - 4 pm

University and Industry Partnerships: Creating Multimedia Solutions to Solve Unique Industry Problems

James L. Mohler Purdue University

Several education and marketing multimedia projects that have been produced through university and industry partnerships at Purdue University.

Electronic Schoolhouse

Room 331
Thursday 2:15 - 4 pm

Moving Mountains: Using Interactive Graphics to Teach Geography

Joshua Seaver Science Museum of Minnesota

How students are developing interactive simulations to learn geography and other science concepts. Hands-on demonstrations and discussions of games created by kids ages 9-16 using inexpensive software that incorporates graphics, video, and sound.

Papers

Room 340 CD
Thursday 4:15 - 6 pm
Chair: **Rosalee Wolfe** DePaul University

Teaching History and Multimedia

Virtual Reality in Education: Irish and American Students on the Virtual Frontier

Casey D. Charvet University of Texas at Austin
J. Matthew Miller III Duke University
Jonah Peretti Isidore Newman School

American and Irish students teach each other about their own respective national histories in a media-rich environment.

Integrating Digital Technology into Classes Through Collaborative Projects: The Making of "Warp & Weft, Might & Magic, Mettle & Motherhood," an Electronic Exploration of Women's History, Colonial Times to 1877

Barbara K. Iverson, Teresa Prados-Torreia
Columbia College Chicago
An interactive CD-ROM and Web site were created via a collaboration between a history class and a CD-ROM multimedia production class.

The Art and Science of Multimedia: An Interdisciplinary Approach to Teaching Multimedia at a Liberal Arts College

Naomi Ribner Wellesley College
Art and computer science students worked in pairs to produce an interactive multimedia project on topics of their choice. The results far exceeded expectations for the excellence of the projects, the motivation of the students, and the impact on the students in their subsequent studies and career paths.

Media Technologies and an Interdisciplinary Approach to Program Design

David J. Keskeys Cheltenham & Gloucester College of Higher Education
Design, philosophy, and implementation of an interdisciplinary, flexible-media, first-degree program developed to equip students with the skills, understanding, and knowledge they need for careers in the rapidly changing media industries.

Panel

Room 340 AB
Thursday 4:15 - 6 pm

P.L.U.N.G.E. Into School

Karl Hook, Debi Barrett-Hayes, David Godwin, Marleni Young

Florida State University School
Teachers and students summarize the P.L.U.N.G.E. project, which integrates technology into the K-12 curriculum.

Electronic Schoolhouse

Room 331
Thursday 4:15 - 6 pm

Zoom Into the Past: Illustrating History in Middle School

Karen Jo Kresge Argyle Middle School
As a digital, interdisciplinary, culminating activity in the study of an historical period, students create either hypermedia stacks or slide presentations that appear to zoom through an architectural structure of the period to a close-up of an object inside.

Papers

Room 340 AB
Friday 8:30 - 10:15 am

Teaching Fine Arts and Animation

CAROL: Students Working on Real-World Projects Empowering Local Cultural Non-Profits

Gordon Goodman, Stephen Jacobs
Rochester Institute of Technology

How the impact of student work has extended far beyond initial Web sites to change the way local museums view and use the Web.

Creative Expression on the Digital Canvas: An Online Digital Art Class

Jeremy Sutton
Portrayals
An online digital art class in which students master and apply digital paint tools to create expressive portraits.

Digital Image/Sound and the Fine Arts: A Double Major with Computer Science

Gregory P. Garvey
Concordia University
A new double major in digital image/sound and the fine arts in conjunction with an option in computer science.

The Language of Cinema and Traditional Animation in the 3D Computer Animation Classroom

Pamela Turner
Virginia Commonwealth University
Finding a balance between instructing students in new software and addressing conceptual issues can be a challenge, especially in an advanced 3D computer graphics class. The solution can come from identifying where traditional media, especially film and animation, overlap 3D computer graphic animation and where 3D has "rules" of its own.

Panel

Room 340 CD
Friday 8:30 - 10:15 am

Where Industry and Academia Meet: An International Perspective

Mark Ollila, Joakim Kempff, Johan Ljungman University-College of Gävle

The problems and issues faced by both academia and industry throughout the world as they develop digital media, including the convergence of traditional computer science students with traditional artists, obtaining qualified staff, and how industry is working together with academia in the search for solutions.

Papers

Room 340 AB
Friday 10:30 am - 12:15 pm
Chair: **Jodi Giroux** The Allen-Stevenson School

Teaching Computer Science

Teaching Computer Graphics with Spreadsheets

Francis T. Marchese Pace University

Through direct manipulation of numbers, students develop a more concrete understanding of the data they compute from the formulas they derive and use in computer graphics.

Web-Based Teaching of Computer Graphics: Concepts and Realization of an Interactive Online Course

Reinhard Klein, Frank Hanisch, Wolfgang Strasser University of Tübingen

Topics within computer graphics still cannot be adequately presented and explored with traditional teaching methodologies and tools. This paper presents concepts, realization, evaluation, and experiences of a computer graphics course that focuses on this problem.

Fuse-N: A Platform for Collaborative Pedagogy

Seth Teller, Brandon W. Porter, Nathan D. T. Boyd, Nicholas J. Tornow Massachusetts Institute of Technology

An instructional, collaborative, Web-based, platform for teaching algorithmic concepts through implementation and verification.

Panel

Room 340 CD
Friday 10:30 am - 12:15 pm

Multimedia Boot Camp: Adventure for the New Millennium

Laurie Burruss Pasadena City College
Karen Owen

San Diego Community College District
Creative Technologies Institute, a consortium of four California community colleges, presents a hands-on and online experience in which faculty from diverse disciplines develop an instructional multimedia curriculum that enhances student learning and creates multimedia experiences in the classroom.

Workshop

Room 340 CD
Friday 2:15 - 4 pm

Concept Development for Computer Animators

Karen Sullivan, Claudia Cumbie-Jones

Ringling School of Art and Design

A workshop for educators who teach time-based media using computers. The major question: How do you take students through a process that will empower them to develop robust concepts that can and should be implemented with computer technology?

25th conference celebration

Exhibits and events celebrating the history of SIGGRAPH and computer graphics, and their influence on technology, society, business, applications, education, and aesthetics:

- Videoconference with panelists at SIGGRAPH 98, the Smithsonian Institution, and the National Museum of Photography, Film & Television, Pictureville, Bradford, United Kingdom
- Digital Campfire – the great stories and legends of computer graphics told by the luminaries themselves
- 25th Conference Recognition Ceremony
- Historical displays and exhibits – hardware, software, and memorabilia
- A Visual Tribute to Computer Graphics Laboratories: 1971 - 1998
- Classic animations and art
- A collection of computer graphics seminal writings
- 25th Celebration Party, hosted by SIGGRAPH 98, SIGGRAPH Professional Chapters, and friends

25 Years of Discovery

The centerpiece of the 25th Conference Celebration, 25 Years of Discovery is a 100-foot-long and 30-foot-wide display of artifacts and memorabilia from 1974 through 1998, where attendees experience some of computer graphics' influence on our world.

A Visual Tribute to Computer Graphics Laboratories: 1971-1998

Hall F Lobby

Twelve laboratories are presented in this exhibit:

Brown University
California Institute of Technology
Carnegie Mellon University
Cornell University
Microsoft Research
New York Institute of Technology
Pixar Animation Studios
Silicon Graphics, Inc.
Stanford University
University of North Carolina at Chapel Hill
The University of Utah
University of Washington

Criteria for inclusion in this tribute were a balance of substance underlying the imagery and striking visual impact and a balance of long-term sustained contributions with short-term focused contributions.

Laboratory principals provided images and names to represent their organizations. The result is a richness of imagery that summarizes some of the key developments in computer graphics.

Seminal Graphics: Pioneering Efforts that Shaped the Field

Significant papers from the past 25 years compiled in one volume to guide and inspire future scholars. The publication covers the areas of visibility, antialiasing, shading, modeling, animation, architecture, rendering from samples, and foundations.

Conetree

In recognition of the human side of the meteoric rise of computer graphics, a 3D VRML conetree traces PhD contributors to the computer graphics field and their progeny. Also, see the Web site: iml.millersv.edu/SIGGRAPH_tree/index.html.

Pioneering Artists

Along with its juried artists, SIGGRAPH 98 showcases the work of 24 well-known practicing artists who have contributed to a number of SIGGRAPH art shows over the past 25 years.

Film Show Classics

Tuesday 21 July 10 - 11:30 pm
Thursday 23 July 10 - 11:30 pm
Auditorium

Attend one of the special showings of the classics of past SIGGRAPH animations.

Portraits in Computer Graphics

Photographic portraits of 80 noteworthy individuals in the field of computer graphics.

Academy Awards

Members of the SIGGRAPH community who have received Scientific and Technical Academy Awards in computer graphics.

Hardware Exhibits

Relive the past by viewing the technology of the 1960s, 70s and 80s.

Trading Cards

SIGGRAPH 98 has produced a set of trading cards featuring award winners, art, and hardware from the past 25 years.

25th Conference Recognition Ceremony

Wednesday 22 July 6 - 6:45 pm
Hall C Lobby

Champagne for toasting, birthday cake, and recognition of those who have made important contributions to the SIGGRAPH conference.

25th Celebration Party

Wednesday 22 July 9 pm - 1 am
Wide World of Sports at Walt Disney World

Videoconference

An International Videoconference: Computer Graphics Pioneers Assess Computer Graphics

Thursday 23 July 10:30 am - 12:15 pm
Room 240 AB

Pioneers discuss computer graphics' most significant contributions over the last 25 years, its greatest current challenges, and what CG will look like between now and 2023.

Digital Campfire

Room 223

Behind every significant innovation in computer graphics, there is a great story. The Digital Campfire is an intimate storytelling program that provides a context for sharing the legend, lore, and anecdote of computer graphics, the funny stories and classic tales behind some of our most important discoveries and innovations.

The first campfire session of each day lasts 1.25 hours. The remaining sessions last 45 minutes each. The last session of each day is an open forum where anyone who has a story to tell on the following topics can drop by and tell a story or two:

- **The First SIGGRAPH**
Anyone who was at the first SIGGRAPH Conference is invited to tell a story about what happened in 1974.
- **Great Moments at SIGGRAPH**
Did you ever get a standing ovation? Remember the papers that caused the biggest sensations? Share your memorable SIGGRAPH moments.
- **Great Napkins of Computer Graphics**
Some of the greatest ideas and discoveries started out as doodles on napkins or note pads. If you have a doodle or sketch that ended up in a SIGGRAPH course, paper, panel, or other presentation, bring it to the campfire and share it with the community.

art gallery: touchware

A milestone exhibition chronicling 25 years of computer art from early algorithmic drawings and paintings to modeled figures and “pebble drawings” by pioneering computer artists. Artistic insights reveal the simultaneity of touch as a sensory experience and the ephemeral experience of being in touch electronically via the Internet. Artworks include digital paintings, drawings, and photographs; interactive installations; teleperformance projects; ARTSITE Web-based creations (www.siggraph.org/s98/conference/art/artsite.html); and work by some of the earliest pioneers of computer art.

Monday through Thursday, 20 July - 23 July, from noon to 1:00 pm, artists discuss their work in the Art Gallery.

ARTSITE

[www.siggraph.org/s98/conference/
art/artsite.html](http://www.siggraph.org/s98/conference/art/artsite.html)

SIGGRAPH 98 initiated a Web site for Web artwork. The objective of ARTSITE is to stimulate creation of new forms of artistic expression in the Web context. This site is available online in the Art Gallery and via the Internet before, during, and after the conference. These projects illustrate innovative thinking about Web sites: artwork that absorbs and creatively utilizes the indigenous nature of the Web, its capabilities and its artifacts. Artists have created new forms of artistic expression that wrap around and extend beyond the Web. Jurying for ARTSITE was done on the Web by jurors in remote locations.

25th Anniversary Celebration of Pioneering Computer Artists

This exhibition chronicles 25
years of computer art, from
early algorithmic drawings and
paintings to modeled figures and
"pebble drawings" by pioneering
computer artists. These artists
have participated in and
contributed to a number of
SIGGRAPH art shows and are
currently practicing artists. This
section documents their early
work together with their current
artwork.

computer animation festival

Animations, performances, and interactions that show computer graphics as product, media, and process. A broad, international selection of this year's most outstanding work is featured in the Animation Theaters as well as in matinée and evening shows of the Electronic Theater. SIGGRAPH 98 also presents two animation events: sigKIDS Theater and, in honor of the 25th conference celebration, Film Show Classics.

Computer Animation Festival Chair

Ines Hardtke
National Film Board of Canada

Location

<i>Electronic Theater</i>	Auditorium
<i>Animation Theaters</i>	314, 315 B

Days

Hours

<i>Electronic Theater</i>	
Monday 20 July	7 - 9 pm
Tuesday 21 July	7 - 9 pm
Wednesday 22 July	7 - 9 pm
Wednesday 22 July	10 pm - midnight
Thursday 23 July	7 - 9 pm

Electronic Theater Matinée

Tuesday 21 July	2 - 4 pm
Wednesday 22 July	2 - 4 pm

Animation Theaters

Sunday 19 July	5 - 7 pm
Monday 20 July	9 am - 6 pm
Tuesday 21 July	9 am - 6 pm
Wednesday 22 July	9 am - 6 pm
Thursday 23 July	9 am - 6 pm
Friday 24 July	9 am - 1 pm

sigKIDS Theater

Animation Theaters and KidsDeck

Film Show Classics

Tuesday 21 July	10 - 11:30 pm
Thursday 23 July	10 - 11:30 pm

Guerilla VR

Josephine Anstey

Electronic Visualization Laboratory

University of Illinois at Chicago

851 South Morgan Street

Room 1120

Chicago, Illinois 60607 USA

anstey@evl.uic.edu

www.evl.uic.edu/anstey

Two roving ImmersaDesks travel throughout SIGGRAPH 98 to:

- Demonstrate networked virtual environments in the Orange County Convention Center.
- Run "multi-way" networked environments connected to users at remote sites.
- Showcase stand-alone, interactive, VR projects.

The virtual worlds in Guerilla VR present participatory narratives; push technical limitations to create lush, almost tangible imagery; and launch users into networked interaction with other people.

Among other applications, Guerilla VR features:

- Asteroid A-612, an application that allows several remotely located participants to simultaneously explore a very small planet. It is designed to help teach children that the world is round by allowing them to explore a world that is much more obviously spherical than our own.
- Dimension World, which uses the three dimensions of VR to teach about hypercubes and 4D math. The instructor is remotely located.
- The Thing Growing, where a participant in one location interacts with a virtual character while, in another location, another participant influences the character's behavior and the progression of the virtual story.

Jennifer James, Celebrity Auto Spokesperson

Barbara Hayes-Roth

Extempo Systems, Inc.
650 Saratoga Avenue
San Jose, California 95129 USA
bhr@extempo.com
www.extempo.com/
AnimaTek International, Inc.
www.animatek-int.com/

Jennifer James is a consumer-friendly, intelligent, interactive 3D ex-NASCAR driver who greets visitors at a virtual auto show and engages them in a dynamically customized five- to ten-minute dialog. Through natural social conversation, Ms. James elicits and offers information as she matches visitors to vehicles suited to their lifestyles and preferences. During this sales process, she applies dialog, facial expressions, and animated gestures to establish a relationship between her sponsor and each visitor. Ms. James exemplifies a new generation of interactive characters who will offer consumers a familiar and compelling sales experience.

Islands of Adventure

J. Michael Moshell

University of Central Florida
Computer Science Department,
Box 25000
Orlando, Florida 32816 USA
moshell@cs.ucf.edu
www.creat.cas.ucf.edu/

Islands of Adventure is a series of imaginary experiences based on a real place-to-be: the Universal Studios Islands of Adventure theme park in Orlando, now under construction. Working with Universal Creative and Real3D, the University of Central Florida's CREAT Digital Media Program, a student-faculty team, is pushing the edges of what is possible in VRML by developing and rendering elaborate computer-generated scenery and hand-drawn animation.

The project simulates what a typical Web interaction might be like when homes are routinely equipped with high-performance 3D graphics-capable and sound-capable information systems. SIGGRAPH 98 attendees use Silicon Graphics workstations and high-performance PC equipment equipped with Real3D graphics systems to experience a virtual theme park. Others visit the theme park via a VRML-based Web site.

Isle of Write: Communication is the Landscape

Dorée Duncan Seligmann and Cati Laporte

Bell Laboratories
Room 4G-608
101 Crawfords Corner Road
Holmdel, New Jersey 07733 USA
doree@bell-labs.com
cati@bell-labs.com

The Isle of Write is a dynamic VRML world for temporal messaging based on the metaphors of writing in the sand and skywriting. Adapted for the SIGGRAPH 98 community, it provides alternatives to the physical message boards, programs and calendars, handwritten posters announcing new Birds of a Feather (BOF) meetings, etc. typically used by attendees.

On this island surrounded by an animated seascape, the beach is the surface of several bulletin boards, and the sky is the surface on which broadcast messages are written. Visitors post messages using the SandTypewriter, and they dispatch the skywriting plane with the SkyWriter. Other conference materials populate the island, including paper abstracts printed on flying LiveWebStationery, BOF updates in SandCastles, and campfires fed by log statistics.

MicroDisplay Camera Phone

Stephanie Silman

The MicroDisplay Corporation
3055 Research Drive
San Pablo, California 94806 USA
silman@microdisplay.com
www.microdisplay.com

The MicroDisplay Camera Phone is an innovative, interactive demonstration created to illustrate the potential of the convergence of telecommunications, computer, and information technology. Attendees can make virtual calls with the Camera Phone, viewing real-time video on the phone's tiny display. When speaking normally into the phone, the user views live video images communicated to the phone's virtual viewer by the camera, which is directed to gather images from the user's field of view. Other visitors can participate in the virtual calls by viewing the same video feed on large, stationary monitors.

MAGNET

Julien Signés and J. Jeffrey Close

France Telecom R&D
1000 Marina Boulevard, Suite 300
Brisbane, California 94005 USA
julien.signes@rd.francetelecom.com
jeffrey.close@rd.francetelecom.com

MAGNET, France Telecom's research and development project for streaming, interactive multimedia, is an implementation of VRML97 and MPEG4 for scalable platforms in telecommunication environments.

MAGNET will enable delivery of a media-rich environment over very low, consumer-available bandwidth such as 33K modems. Because it implements the VRML97 and MPEG4 standards, MAGNET represents a near-future technology that will be widely accessible to an Internet consumer audience, to business intranets and extranets, and to content creators. The compression capabilities in MPEG and binary encoding for VRML will demonstrate the exploitation of this low-bandwidth medium. The MAGNET architecture is scalable, and future work will include implementations for scaled-down clients such as laptops or smaller devices.

Gesture VR: Gesture Interface to Spatial Reality

Jakub Segen

Bell Laboratories
Room 4E-632
101 Crawfords Corner Road
Holmdel, New Jersey
07733 USA
segen@lucent.com

Collaborator

Senthil Kumar

Bell Laboratories

In this demonstration, users interact with spatial simulations by means of a novel hand gesture recognition interface technology developed at Bell Labs. A freely moving, gloveless hand is the sole input device. Image sequences of the user's hand motions, acquired by video cameras, are processed by a computer program that recognizes gestures and calculates the hand's parameters. This information is used for precise control of navigation in 3D space, for grasping and moving objects on the screen, or to provide a new kind of interface in video games.

Users fly through the Yosemite Valley by pointing in 3D; they "grasp" and move objects to compose 3D scenes; they play a video game (such as Doom) in which a character is directed by hand pointing, and game actions are triggered by gestures.

CIMBLE: A Collaborative Learning Environment

Edward Wagner

The Franklin Institute
222 North 20th Street
Philadelphia, Pennsylvania 19103 USA
+1.215.448.1119
ewagner@fi.edu
www.cadett.fi.edu

CIMBLE (CADETT Interactive Multi-User Business Learning Environment) enables six participants and a facilitator to enter a VRML world as 3D avatars and work together as a team on a guided task. The project is designed to integrate structured training methods into a sophisticated 3D world where the participants are no longer working in the same location. Since virtual, distributed work teams are replacing many traditional work teams, guidelines need to be developed to make this training effective in this new virtual environment. The CIMBLE prototype and project evaluation data highlight the results of a new effort in this area of online communities.

underscore

John Underkoffler

Massachusetts Institute of Technology
20 Ames Street
Cambridge, Massachusetts
02139 USA
jh@media.mit.edu

Hearing music: we know this sort of thing well. Looking at music: there is such a thing as that, but we know it not nearly so well. The one is effortless, you say. The other is difficult.

But if, you then muse: if there were something that you could apply, that led you through a printed score in synchrony with its aural performance and in a way that always made clear the relationship of the seen to the heard...

If, you ponder: if it let you navigate this music, not just with PLAY and PAUSE and REW and FF but also by swooping and diving, peering forward and back piloting through the score as if above a landscape of notes...

If, you mull: if it gave you breadcrumb-like markers to drop so you could find your way back to the best parts, if it let you create excerpts, if it ran on SGI hardware, if it above all venerated the beauty of musical typography...

Well, then...

enhanced realities

1998's international showcase of innovations that facilitate human/idea/machine interaction and strive to recapture our child-like wonder of discovery. Where computer graphics combine with emerging technologies to envision a new, enhanced reality with clever new interfaces that challenge our ideas about computing in the physical world.

HoloWall: Interactive Digital Surfaces

Jun Rekimoto
Sony Computer Science Laboratory, Inc.
3-14-13 Higashigotanda, Shinagawa-ku
Tokyo 141-0022 JAPAN
rekimoto@csl.sony.co.jp
www.csl.sony.co.jp/person/rekimoto/holowall/

HoloWall is an interactive wall system that allows visitors to interact with digital information displayed on the wall surface without using any special pointing devices. It demonstrates several interactive environments, including a world of autonomous digital insects that respond to body movements and an interactive sound environment that reactively creates music sequences based on the user's actions.

Swamped! Using Plush Toys to Direct Autonomous Animated Characters

Bruce M. Blumberg
Synthetic Characters Group
Media Lab
Massachusetts Institute of Technology
E15-311, 20 Ames Street
Cambridge, Massachusetts
02139 USA
bruce@media.mit.edu
characters.www.media.mit.edu/groups/characters/

Swamped! is a multi-user interactive environment in which instrumented plush toys are used as an iconic and tangible interface to influence autonomous animated characters. Each character has a distinct personality and decides in real time what it should do based on its perception of its environment, its motivational and emotional state, and input from its "conscience," the guest. A guest can influence how a given character acts and feels by manipulating a stuffed animal corresponding to the character. For example, the guest could direct her character's attention by moving the stuffed animal's head, comfort it by stroking its belly, or have it wave at another character by waving its arm.

enhanced realities

AR2 Hockey

Toshikazu Ohshima

Mixed Reality Systems
Laboratory, Inc.
6-145 Hanasaki-cho
Nishi-ku, Yokohama 220-0022
JAPAN
ohshima@mr-system.com
www.mr-system.com/

In AR2 Hockey (Augmented Reality AiR Hockey), players share a physical game field, mallets, and a virtual puck to play air hockey in simultaneously shared physical and virtual space. They can also communicate with each other through the mixed space. Since real-time, accurate registration between both spaces and players is crucial to playing the game, a video-rate registration algorithm is implemented with commercial head-trackers and video cameras attached to optical see-through head-mounted displays.

PingPongPlus

Craig Wisneski

Media Lab
Massachusetts Institute of
Technology
E15-452, 20 Ames Street
Cambridge, Massachusetts
02139 USA
wiz@media.mit.edu
tangible.media.mit.edu/projects/pingpongplus.html

The goal of this project is to explore systems for collaborative play that push the physical world back into the forefront of design, without relying on simple GUI controllers, such as a mouse, keyboard, and joystick. Various audio and visual augmentations have been added to a conventional ping-pong table with a non-invasive, sound-based ball tracking system. The "reactive table" displays patterns of light and shadow as a game is played, and the rhythm and style of play drives accompanying sound. At times, the game is subtly enhanced, and sometimes it is powerfully changed. In one mode, the table appears to be covered with water, so that playing on it creates patterns of subtle ripples. In another mode, images that race around the table change the entire scoring system and method of play.

Object-Oriented Displays

Naoki Kawakami, Masahiko Inami, Yasuyuki Yanagida, and Susumu Tachi

Tachi Laboratory
MEIP, The Faculty of Engineering
The University of Tokyo
7-3-1 Hongo Bunkyo-ku
Tokyo 113-8656 JAPAN
kawakami@star.t.u-tokyo.ac.jp

In Object-Oriented Displays, users perceive and operate a virtual object as if it were real. Design and implementation of three types of object-oriented displays are demonstrated: MEDIA-Ace, a liquid crystal display (LCD) and position sensor; MEDIA-Cube, a position sensor and four LCDs arranged in the shape of a cubic body; and MEDIA-Crystal, which uses optical projection.

Mass Hallucination

Trevor Darrell

Interval Research Corporation
1801 Page Mill Road, Building C
Palo Alto, California 94304 USA
trevor@interval.com

This imaging display changes according to the number of people watching it, their behaviors, and whether they've watched the device before. It is reflexive: the displayed image is a function of the people watching the display. It encourages crowds of people to collectively manipulate the display with their bodies or faces. Yet it is also personal, in that it can recognize the appearance of a user for short-to-medium periods of time and tailor the display accordingly. As in Magic Morphin' Mirror, a SIGGRAPH 97 Electric Garden project by the same group, this display captures video along the same optical axis as video is displayed, so images of observers can be directly manipulated, composited, or distorted on the display. In contrast to the previous work, which only considered a single user at a time and had no persistence after they left, this display is designed to visually track a crowd of people and provide a shared graphical experience.

Foot Interface: Fantastic Phantom Slipper

Yuichiro Kume

Tokyo Institute of Polytechnics
1583 Iiyama
Atsugi, Kanagawa 243-0297
JAPAN
kume@photo.t-kougei.ac.jp
laplace.photo.t-kougei.ac.jp/

People should be able to use their feet just as freely in a virtual environment as they do in the real world. Wearable interfaces should not cause psychological and/or physical discomforts. This slipper-like multi-modal interface is based on those two assumptions. It features a slipper interface with cyber-worlds. Each foot's movement is measured in real time with an optical motion capture system, and feedback signals are transmitted to the soles. Phantom sensations elicited by multiple tactile stimuli allow transmission of complicated feedback information such as objects moving around the feet. Optical markers for motion capture and vibrators for tactile stimulation are installed in the slippers. Players interact with virtual objects projected onto a floor screen, sense them, and use them to play games.

inTouch

Scott Brave

Media Lab
Massachusetts Institute of
Technology
E15-468C, 20 Ames Street
Cambridge, Massachusetts
02139 USA
brave@media.mit.edu
tangible.media.mit.edu/projects/in-touch.html

Touch is a fundamental aspect of interpersonal communication. Yet while many traditional technologies allow communication through sound or image, none is designed for expression through touch. The goal of inTouch is to bridge this gap by creating a physical link between users separated by distance. InTouch consists of two separate identical objects, each consisting of three cylindrical rollers mounted on a base. The two objects behave as if corresponding rollers are physically connected, but in reality, the objects are only virtually linked. Sensors are used to monitor the states of the rollers, and computer-controlled motors synchronize those states, creating the illusion that distant users are interacting through a single, shared physical object.

Virtual FishTank

Stacy Koumbis

147 Sherman Street
Cambridge, Massachusetts
02140 USA
stacy@nearlife.com
www.nearlife.com

The Virtual FishTank is a simulated aquatic environment featuring a 400-square-foot tank populated by whimsical and dynamic fish.

Participants can:

- Create their own fish
 - Design behaviors for their fish
 - Observe their fish interacting with other fish.
 - Manipulate behavioral rules for a group of fish.
 - Discover how these behaviors can emulate schooling.
 - Analyze emerging patterns.
- Through real-time 3D graphics, visitors are introduced to ideas from the sciences of complexity – ideas that explain not only ecosystems, but also economic markets, immune systems, and traffic jams. In particular, visitors learn how complex patterns arise from simple rules.

Haptic Screen

Hiroo Iwata

Institute of Engineering
Mechanics
University of Tsukuba
Tsukuba, 305 JAPAN
iwata@kz.tsukuba.ac.jp
intron.kz.tsukuba.ac.jp

Haptic Screen is a new force-feedback device that deforms itself to present shapes of virtual objects. Typical force-feedback devices use a grip or thimble, but users of Haptic Screen can touch the virtual object without wearing anything. Haptic Screen employs an elastic surface made of rubber. A 6 X 6 array of 36 actuators deforms the surface and controls its hardness according to the force applied by the user. An image of the virtual object is projected onto the elastic surface so that the user can directly touch the image and feel its rigidity.

Natural 3D Display System Using Holographic Optical Element

Koji Yamasaki

Laboratories of Image Information Science and Technology
1-1-8-3F, Shinsenri-Nishi, Toyonaka,
Osaka 565-0083 JAPAN
yamasaki@senri.image-lab.or.jp

In this natural 3D display system, a holographic optical element (HOE) overcomes conflicts between convergence and accommodation. Users experience clear stereoscopic vision, without glasses, of a broad field of view. With its multiple-focus HOE, the system offers two pairs of viewing points in back-and-forth or horizontal locations.

Direct Watch & Touch

Takahisa Ando

Laboratories of Image Information Science and Technology
Daiichi-Kasai Senri-Chuo Bldg. 3F, 1-1-8,
Shinsenri-Nishimachi, Toyonaka,
Osaka 565 JAPAN
ando@image-lab.or.jp
www.image-lab.or.jp/

This 3D display offers access to a virtual stereoscopic world without special glasses. When users "touch" the world with real tools (for example, a hammer, a surgical knife, a wrench, tweezers, etc.), directly and interactively, they hear and feel contact and transform virtual objects. This binocular parallax display combines virtual and real environments in full, high-resolution (XGA) color. It is a new approach to virtual reality that handles virtual objects with "real" tactile feedback.

Media & Mythology

Kimberly Abel Parsons

Visual Systems Laboratory
Institute for Simulation & Training
3280 Progress Drive
Orlando, Florida 32826 USA
kparsons@ist.ucf.edu

In ancient times, mythology was the high-tech method for storing data on a society's history, rituals, and ethical systems. The paradigm in use for these early information systems was storytelling. Media & Mythology explores the link between traditional mythologies from several cultures and new technology/new media. Man and Minotaur allows visitors a chance to portray the two ancient combatants and the gods that taunt them within a fully immersive, synthetic version of Dedalus' Labyrinth in ancient Crete. In Video Totem, expressionistic visitors create and view their own mythologies on a large digital totem pole. Dear Oracle integrates contemporary media into traditional soothsaying. The result is a new form of oracle: digital divination.

Natural Pointing Techniques Using a Finger-Mounted Direct Pointing Device

John Sibert

Department of Electrical Engineering and Computer Science
The George Washington University
Washington, D.C. 20052 USA
sibert@seas.gwu.edu

Pointing with the index finger is a natural way to select an object, and if it can be incorporated into human-computer interaction technology, a significant benefit will be obtained for certain applications. This demonstration presents a prototype solution. Based on an infrared signal power density weighing principle, a small infrared emitter on the user's finger and multiple receivers placed around the laptop screen generate data for a low-cost microprocessor system. The microprocessor sends its output to a laptop computer, where it is used to determine coordinates for the cursor location. The prototype is not only a proof of concept. It is also a tool for further research on human performance in pointing and further development of interactive techniques.

Virtual Head

Thom Brenner

Echtzeit GmbH
Kanstrasse 165
10623 Berlin, GERMANY
tbrenner@echtzeit.de

Virtual Head is a new approach that enhances communication in virtual environments and telepresence. It tackles one of the key problems in the field of innovative telecommunication technology: how to represent oneself in virtual environments in such a way that an emotional and natural way of communicating with others is possible?

The Virtual Head conferencing prototype renders three-dimensional images of every communication partner in real time. It establishes eye-to-eye contact among the communication partners by projecting live-video textures onto 3D geometry of a head. The application translates the head movement so that video images show the original movements. Compressed video and audio information is exchanged via a high-bandwidth network to establish a remote conferencing scenario. Video and audio are decompressed on both sides, and the images are projected onto a screen.

Stretchable Music with Laser Range Finder

Pete Rice and Joshua Strickon

Massachusetts Institute of Technology
E15-495, 20 Ames Street
Cambridge, Massachusetts
02139 USA
strickon@media.mit.edu/
brainop.media.mit.edu/
~strickon/siggraph.html

Stretchable Music with Laser Range Finder combines an innovative, graphical, interactive music system with a state-of-the-art laser tracking device. An abstract graphical representation of a musical piece is projected onto a large vertical display surface. Users are invited to shape musical layers by pulling and stretching animated objects with natural, unencumbered hand movements. Each of the graphical objects is specifically designed to represent and control a particular bit of musical content. Objects incorporate simple behaviors and simulated physical properties to generate unique sonic personalities that contribute to their overall musical aesthetic.

Shall We Dance?

Kazuyuki Ebihara

ATR Media Integration & Communication
Research Lab
2-2 Hikaridai Seika-cho
Soraku-gun
Kyoto 631 JAPAN
ebihara@mic.atr.co.jp

Real-time 3D computer vision gives users control over both the movement and facial expression of a virtual puppet and the music to which the puppet "dances." Multiple cameras observe a person, and human silhouette analysis achieves real-time 3D estimation of human postures. Facial expressions are estimated from images acquired by a viewing-direction controllable camera, so that the face can be tracked. From the facial images, deformations of each facial component are estimated. The estimated body postures and facial expressions are reproduced in the puppet model by deforming the model according to the estimated data. All the estimation and rendering processes run in real time on PC-based systems. Attendees can see themselves dancing in a virtual scene as virtual puppets.

interactive dance club

The SIGGRAPH 98 Interactive Dance Club is a multi-participant, interactive environment with live computer-generated imagery and lighting, synchronized to real-time-generated dance music (acid jazz, world, ambient, drum 'n bass).

The SIGGRAPH 98 Interactive Dance Club is a multi-participant interactive environment with real-time computer-generated imagery, lighting, and video, synchronized to dance club music (i.e. acid jazz, tribal, ambient, drum & bass).

Instead of dancing to prerecorded music and images, or passively watching a performance, members of the audience become participants.

Within interactive zones located throughout the club, participants influence music, lighting, projected computer graphics images and video. There are zones for single participants, dual participants and groups of participants. Like sections in an orchestra, output from the interactive zones combines with a pre-defined basic rhythm to form the overall performance. Moving from zone to zone, participants experience different blends of musical and visual elements.

A sophisticated system of hardware and software keeps all the zones in sync while analyzing and filtering participant input, in order to deliver a musically coherent and visually satisfying experience. Feedback to the participants is designed to be immediate and responsive.

Tina Cobb
 Computer Science Department
 Carnegie-Mellon University
 5000 Forbes Avenue
 Pittsburgh, Pennsylvania 15213 USA
 tinac@cs.cmu.edu
 alice.cs.cmu.edu

Alice is a development environment for creation of interactive 3D worlds. Our primary goal is to make the program easy to learn and use for non-engineering junior high, high school, and undergraduate students. We want students with little or no programming experience to be able to run through a 30-minute tutorial and start building fun and interesting 3D worlds right away.

Binary Biker Project: An Exploration of Motorcycles, Art, and Technology

In support of the New York City ACM SIGGRAPH Dan Preda Scholarship Fund

Rick Barry
 Pratt Institute
 Department of Computer Graphics
 200 Willoughby Avenue
 ARC, LL, F-10
 Brooklyn, New York 11205 USA
 rbarry@interport.net

In July of 1998, a motorcycle convoy led by two specially rigged motorcycles and a support vehicle departed from the campuses of Pratt Institute and the School of Visual Arts in New York City, to begin an event-filled journey to SIGGRAPH 98 in Orlando. These Binary Bikers were accompanied by an invited entourage from the worlds of art, technology, education, and motorcycling.

During the journey, still and moving images were captured by both the Binary Bikers and the virtual bikers via the Web site and digitally stored on the Web server in an online "image pool" for common access by all participants. At SIGGRAPH 98, the Binary Biker exhibition area contains several workstations offering access to the Binary Biker Web site, as well as computer graphics software and hardware tools to enable artists to create original works and upload them to the SIGGRAPH 98 Guerilla Gallery.

CAROL (Culture and Arts of Rochester Online)

Stephen Jacobs

Rochester Institute of Technology
Department of Information
Technology
102 Lomb Memorial Drive
Rochester, New York 14623
USA

Four years ago, students in "Topics in Interactive Multimedia" built a Web site for a Rochester, New York "living history museum." From that initial site, CAROL has grown to include over 20 local arts and cultural institutions' Web sites, an online events calendar, and a database of local artists. CAROL is also a consortium of organizations actively involved in shaping the future and growth of the sites.

The Cyberarium

Dave Warner

Institute for Interventional
Informatics
500 University Place
Syracuse, New York 13210 USA
davew@npac.syr.edu

The Cyberarium is an innovative, interactive environment that stimulates discovery and exploration of creative and socially enriching interactive techniques through intelligence-engaging, imagination-inducing, hands-on experiences with novel human-computer interaction devices. The Cyberarium's intent is to develop an experimental environment in which "cultural rapid prototyping" can be observed, researched, and refined – a place where social dimensions can be intelligently combined with the rapid development of the information infrastructure.

Dream Map Tapestries

Mitchel Groter

Video Central
825 Sweetwater Island Circles
Longwood, Florida 32779 USA
Pathways@parkave.net

Nancy Krebsbach

Evans High School
858 Park Lake Court
Orlando, Florida 32803 USA
Faea@magicnet.net

This event celebrates the work that sigKIDS groups everywhere have done throughout the year. The kids' work is presented on videotape. After the screening, a panel discussion takes place among people from industry and education who truly care about helping kids and their parents. The Dream Map Tapestries connects motivated sigKIDS with mentors who will continue the relationship beyond SIGGRAPH 98. The kids have a unique opportunity to talk one-on-one with people who can be role models for them. They hear, directly from the professionals, what it took to become successful in the computer graphics industry, what particular talents and skills they needed, what personal traits are the most helpful, and exactly how young people should prepare themselves for a successful career in computer graphics.

Express Link-Up

Pat Ryan

Express Link-Up
32 Matham Road
East Molesey
Surrey KT8 0SU
UNITED KINGDOM
101521.1516@compuserve.com

Founded in January 1997, Express Link-Up empowers hospitalized children by providing appropriate computer and communications technology, including a dedicated secure intranet that enables them to play, learn, communicate, and develop critical life skills. 250,000 children pass through UK hospitals each year, of which 150,000 are considered long-stay. Some children (for example, those who require six-hour kidney dialysis three days a week) suffer terrible disruption to their education. With PCs next to their beds, they can bring work to the hospital, do school projects, study for exams, or use relaxation software to overcome stress.

Generation LEGO

Lisbeth Frølund

Concept Developer
LEGO A/S, SPU-Darwin
Klovermarken 120
DK-7190 Billund, DENMARK
lisbeth@digilego.com

Two new products (LEGO Mindstorms Robotics Invention System and LEGO Technic CyberMaster) bring construction toys into the information age and give children an opportunity to build their own intelligent and interactive inventions. LEGO Mindstorms, developed in cooperation with the MIT Media Lab, is the first in a new generation of challenging, creative learning tools that enable children to use a PC to program intelligence into their own inventions. LEGO Technic CyberMaster is a futuristic play set that combines the virtual fun of on-screen adventure with physical models. Children can build their own models and bring them to life with a home computer.

These new products are designed to empower children in an age of increasing computerization and challenge their creativity, craftsmanship, programming, and critical thinking.

HistoryCity

Terry Lim

Kent Ridge Development Labs
21 Heng Mui Keng Terrace
SINGAPORE 119613
terry@krdl.org.sg

This 3D virtual world for kids is set in 1870s Singapore. The world features functional buildings; personal "decorate-able" rooms; animated objects that can be picked up and dropped; personal theater stages upon which dioramas can be built from objects found in the world; over 200 avatars representing people and occupations of the period; agents that provide news, stories, poems, jokes, pawn brokering services, and messaging services; clubhouse memberships; maps; and 22 communities, each with its own distinct architecture, and music.

Hyperscratch ver.7

Haruo Ishii

30-1 Ishihata Naruomi-cho
Midori-ku
Nagoya-shi 458-0801 JAPAN
MXC00275@niftyserve.or.jp

This interactive piece allows users to generate a variety of sounds and images as if they were using simple hand motions to paint a picture on a canvas of space or playing a piano with invisible keys. It is designed to provide users with uninhibited creative space and time. The only input devices are hands and bodies. Both hands can be used to create sounds and images, which allows users to move as if they are conducting a symphony or dancing. Such natural and free body movement is not possible through a mouse, a touch panel, or a space-input device. Thus Hyperscratch is not simply an input or pointing device but a unique environmental interface that mirrors the physical motion of the user.

InterSpace Station

Robert Rothfarb

Virtual World Designer
NTT America Inc.
100 Shoreline Highway
Suite 100A
Mill Valley, California 94941 USA
rob@nttlabs.com

InterSpace Station is a networked 3D virtual environment that provides a shared laboratory. Students are able to conduct science experiments, interact with each other, and participate in unique presentations about astronomy, physics, and life aboard an orbiting space station. The InterSpace 3D multi-user virtual world client/server software platform from NTT allows users, as avatars, to navigate digital spaces and communicate with each other using real-time audio, facial image video, and text. Students and teachers participate from SIGGRAPH 98 and two remote sites, one in the San Francisco Bay area and one in Japan. Visitors may also participate via the Internet. NTT plans to collaborate with educators and SIGGRAPH Professional Chapters to allow students to participate in this unique interactive distance-learning environment.

KidCast For Peace: Solutions For A Better World

Peter H. Rosen

Visionary Artists Resources
Including
Other Unique Services
2263 Sacramento Street, #2
San Francisco, California 94115
USA
peter@creativity.net

Children of all ages share their art and direct us to their KidCast For Peace Web sites, VRML worlds, chat rooms, and interactive music spaces. Children at each participating site respond to comments and questions from local and cyber audiences. Free CU-SeeMe videoconference software enables real-time visual and audio interaction. The video camera focuses on the child and art together, then zooms into the art. A KidCast Central (creativity.net/kidcast2.html) moderator encourages the other sites to respond to what they see, evoking questions, feelings, and impressions.

The world needs an infusion of new ideas and loving connections to defuse the downward spiral of destructive human interactions. KidCast For Peace is part of a developing network of physical Creativity Cafes, other "New Schools," and evolutionary organizations that are drawn toward cooperative activities.

Living and Learning

**Candis Hoffman-Bomse
Erin Hethington Ebert**

Savannah College of Art and Design
210 E. 60th Street
Savannah, Georgia 31405 USA
cbomse@worldnet.att.net
E2ebert@aol.com

In Living and Learning, we research cultural issues, media conventions, and technological resources in the hope that this postmodern approach will help convey much needed information about AIDS to an age group that sees itself as unaffected and invincible. Our goal is to engage this group long enough for them to become involved in the interplay of moving imagery and sound, virtual games, and navigation of the work's topography via mouse-driven interactivity. The result, we hope, will be the work's ultimate goal: education, the best defense against AIDS.

The Virtual Archaeologist

Nobuo Masuda

Cyber Entertainment, Inc.
5111 Denny Avenue #10
North Hollywood, California
91601 USA
masuda@cyber-net.co.jp

Developed for an archaeological museum in Nara prefecture, Japan, this kiosk program introduces young visitors to the world of archaeology. Nara prefecture is well-known for its historical artifacts. In ancient times, it was the capital of Japan. One of the most important objectives of this software is to inspire newer generations and help them understand the value and significance of archaeological studies. The kiosk uses "push" technologies in an "interactive document." Sometimes the software automatically opens up new pages and spontaneously conveys information to the users, who then feel as though they are discovering clues and mysteries.

The Virtual Art Gallery/Streaming Video on the Web

Ann Ioannides

Coral Reef Senior High School
10101 SW 152 Street
Miami, Florida 33157 USA
ioannia@mail.firm.edu
crhs.dade.k12.fl.us

Imaginative students from Coral Reef Senior High School (Miami) created two projects:

- A VRML art gallery, featuring works of art produced entirely by first- and second-year students.
- A streaming video newscast. This "Cudavision," five-minute daily newscast has been digitized for worldwide viewing. Tune in frequently to what is happening at the school!

The school features six magnet programs as well as a full athletic and extra-curricular program, attracting the best and brightest students from Dade County. The 1997-98 year is the school's first year of operation.

When Children Draw In 3D

Katiuska Varela

4 rue Calmels
75018 Paris, FRANCE
gonzalez@ensba.fr

In this project, children's drawings are used to create a 3D animation. It begins with a workshop that asks children a series of questions about a story: Who is this story about? What is it about? Where does it develop? The workshop results are used to prepare a script, then the script is adapted for a storyboard, and the children draw the characters and places where the story happens. Portions of the children's drawings (for example, the legs of one drawing, the head of another, and the ears of a third) are combined and scanned, then colored by the children. The colors are used as textures for elements of the story, and the scans are used to make the 3D forms. Finally, the storyboard scenes are prepared for animation, and characters, locations, cameras, lights, and other elements are organized to form the final edition of the story.

Where Stories Meet by TeleCommunity

Robert Dunn

TeleCommunity Project
College of Liberal Arts
Duquesne University
111 The Oaks
Pittsburgh, Pennsylvania 15215
USA

Where Stories Meet by TeleCommunity represents a confluence of ideas, images, and experiences expressed through digital media and shared over the Internet by students from Jerusalem, Istanbul, Orlando, Pittsburgh, New Orleans, and Los Angeles. Underlying the social fabric of this project are relationships enhanced by personal meetings, dialogue, and negotiated understandings between participants. This is sustained remotely by periodic and ongoing network contact, email, Internet videoconferencing, Web site updates, and file exchanges. Over-arching themes bring diverse responses and help to spark the imagination. The individual grows and experiments within the collaborative group setting, and energies are shared with remote partners.

Save the Planet: Eco-Art on the Web

June Julian

New York University
P.O. Box 81
Gladstone, New Jersey 07934
USA
julianj@acf2.nyu.edu
www.nyu.edu/projects/julian/

Since this project was first launched two years ago, students from around the world have been sending in their art work, poems, stories, and eco-facts about the special trees in their environment. So far, 21 U.S. states and 18 foreign countries are represented on at least 100 separate Web pages. The youngest contributors are Illinois kindergartners, and the oldest students are in the 12th grade in Nevada. One New Jersey boy designed his own interactive space on the project, where he asks the world to manipulate his pictures and send them back to the site. The project is especially designed to welcome unique ideas about the old trees of the world. Send them in! We still have lots of states and countries that are not represented. What is the oldest tree in your neighborhood?

SIGGRAPH TV/online technologies

Live events, recorded programming, and video coverage of SIGGRAPH 98 broadcast throughout the Orange County Convention Center and beyond.

For SIGGRAPH 98, SIGGRAPH TV and SIGGRAPH Online join forces to create a prototype 21st century "all-media" production facility. Throughout the conference week, this state-of-the-art television studio, production facility, and multimedia broadcast center creates and broadcasts almost 60 hours of television programming and Internet content.

The facility occupies more than 6,000 square feet and includes the very latest in television and Internet hardware and software. The programming created in the facility is broadcast to over 30,000 attendees during SIGGRAPH 98, provided locally to SIGGRAPH 98 shuttle buses, and delivered to 200 million Internet users in over 200 countries through a variety of "streaming" media and Web-based reporting.

A staff of more than 50 producers, editors, scriptwriters, graphic artists, computer administrators, online publishers, and technical personnel was brought together to produce this week-long event. The content includes the world's best computer animations, interviews, and daily in-depth coverage of the 25th international conference on computer graphics and interactive techniques.

Designed as a showcase of technology, this facility is open to all SIGGRAPH 98 attendees. During production, attendees can take a self-guided tour through the facility and watch as television content is edited for broadcast and the Internet, and view first-hand the equipment used to create the content and manage the process.

A state-of-the-art fiber backbone network linking programs and exhibitors within the conference to the global computer graphics community.

GraphicsNet is the SIGGRAPH 98 conference intranet. It serves as the link among the many conference programs and events, and as the gateway to the global graphics community. Once again, GraphicsNet includes two different optical fiber backbones:

1. A production backbone based on Fast Ethernet (100 Mbps) links the Exhibition; the Internet Access Centers; the 18 presentation rooms for Papers, Panels, Courses, Sketches, and the Educators Program; Hall C; information kiosks; and the Creative Applications Lab (CAL). The production backbone is built with products from Cisco Systems, 3COM, Fluke, and others. It is connected to the Internet through a "burstable" T3 circuit on the Orlando Telephone Company optical fiber Synchronous Optical Network (SONET) ring that serves the Orange County Convention Center and metropolitan Orlando. A guaranteed bit rate of 25 Mbps to UUNET's Internet Services and their multiple Internet backbone providers has been obtained for SIGGRAPH 98.
2. The other GraphicsNet backbone is based on ATM (155 Mbps, OC-3) and is designed primarily to serve as the highperformance video network for SIGGRAPH TV. It connects all the information kiosk locations with video and with SIGGRAPH TV Master Control. The ATM network uses switches and video encoding and decoding products from FORE Systems.

GraphicsNet also includes several dedicated optical fiber and copper connections that are being used by exhibitors and contributors to distribute digital video and for other applications.

The primary network management workstations and servers used in the Network Operations Center (NOC) are supplied by Sun Microsystems, Inc.

Are you looking for a job in the computer graphics industry? Does your company have openings for qualified individuals in the computer graphics industry? If so, then the SIGGRAPH 98 Career Center is the perfect place for you!

- **Résumés are posted and distributed.**
- **Job openings are posted and distributed.**
- **Interview scheduling is offered.**
- **Career mentoring services are offered.**
- **A CD-ROM of résumés is available for purchase.**

Career Center Location

Rooms 307, 308

Days

Saturday 18 July
 Sunday 19 July
 Monday 20 July
 Tuesday 21 July
 Wednesday 22 July
 Thursday 23 July
 Friday 24 July

Hours

6 - 8 pm
 noon - 7 pm
 8 am - 6 pm
 8 am - 6 pm
 8 am - 6 pm
 8 am - 6 pm
 8 am - 3 pm

Job seekers can also drop off their résumés for the Career Center staff to give to a specific company. This service is only offered for companies that have agreed to accept résumés. Bring extra copies of your résumé if you wish to take advantage of this service. Career Center staff also assist in scheduling interviews with prospective employers. Take advantage of the Career Mentoring Services offered during the conference. Volunteers from the SIGGRAPH committees will be available to discuss the current job situation in the computer graphics industry, job descriptions and responsibilities, and how to approach prospective employers.

Employer Services

Career Center job posting services are provided for SIGGRAPH 98 exhibitors free of charge and to non-exhibitors for a \$500 service fee.

Companies are invited to bring their job postings directly to the SIGGRAPH 98 Career Center. All job postings are mounted on bulletin boards and may be as creative as you like, following a few simple guidelines:

- At least two copies of each posting must be submitted.
- Job posting copy cannot exceed 11 inches x 17 inches.

The SIGGRAPH 98 name and logo cannot appear on the posting. Use materials that can be easily hung on a bulletin board using push pins. Job postings are not accepted on disk or via email.

SIGGRAPH 98 offers participating companies the opportunity to purchase a compilation of the collected résumés on CD-ROM. For details on purchasing this CD-ROM, please contact SIGGRAPH 98 at +1.312.321.6830 or careers98@siggraph.org.

Job Fair

Wednesday 22 July 8 am - 6 pm
 Room 311

In a relaxed, informal setting, job seekers can explore how their skills and experience match current job openings at participating companies. All registered SIGGRAPH 98 attendees are welcome to attend.

special interest groups

Special Interest Groups (SIGs) are for attendees who think and work in similar technologies and environments. Special Interest Groups are open to all attendees. They are usually informal. At some, general subjects are discussed; others convene around topics related to specific product vendors. See the SIGGRAPH 98 Conference and Exhibition Locator for room locations and times of SIGs.

Birds of a Feather meetings (Room 204 C) are impromptu gatherings. They can be scheduled at any time, to discuss any subject. To organize your own impromptu meeting, simply use the sign-up board in the Hall C Lobby, where late additions and revisions to the Special Interest Groups and Birds of a Feather schedule are posted.

For more information on these Special Interest Groups, contact:

registration and media information

Member Rate

If you are currently an ACM or SIGGRAPH member, you are eligible for member discounts. You must provide your current membership number in order to receive the discount, otherwise you will be charged the non-member rate. Local or regional SIGGRAPH memberships are not eligible for registration discounts.

Student Rate

You must be a full-time student in order to qualify. You must attach copies of the following to your registration form to qualify for student rates:

- Your 1998 ACM student membership card OR your valid 1998 student identification card, AND
- A letter on school letterhead verifying you are a full-time student. The letter must include your registrar's name, address, and phone number so we can verify your student status.

If you do not attach both of the above items to your registration form, you will not receive the student discount and will be charged the non-member rate. In addition, you must present your ID card (not a copy) in order to pick up your credentials.

Special Policies

Conference registration in any category is limited to ages 13 and older. Children under 16 are not permitted in the Exhibition. No cameras or recording devices are permitted at SIGGRAPH 98. SIGGRAPH 98 may record all, or portions of, conference programs and events.

Registration Hours

If you registered by Friday 30 June, please go to Advance Registration, Hall B1, OCCC. Otherwise proceed to Onsite Registration, also in Hall B1.

Saturday 18 July	6 - 8 pm
Sunday 19 July	noon - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8 am - 1 pm

Media Headquarters Hours

Sunday 19 July	10 am - 6 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8:30 am - 1 pm

Media Registration

Media representatives must register in the Media Headquarters Office, Room 208. You must submit full and proper media credentials for a media pass. No exceptions will be made.

Media Briefing

Room 315 B
Tuesday 21 July 8:15 - 8:45 am

The official SIGGRAPH media briefing is the place to hear what's new and what's hot at SIGGRAPH 98. Preview the Electronic Theater and receive insight into SIGGRAPH 98 programs and venues.

Exhibition Floor Tour

Immediately following the Media Briefing
Tuesday 21 July

The SIGGRAPH 98 Exhibition, a benchmark for the diversity and exponential growth of digital technologies, showcases over 250 exhibitors in more than 170,000 square feet. Gain access to the exhibit floor before it opens to the public. Get a "sneak preview" of the latest products and applications. Small groups of media representatives will be escorted onto the exhibit floor.

Media Tours

Art Gallery: Touchware
CAFFEINE++, Hall C
Monday 20 July 8:30 am

Enhanced Realities Tour

CAFFEINE++, Hall C
Wednesday 22 July 8:30 am

Exhibitor Media Events

A schedule of various exhibitor media events will be available in the Media Headquarters Office, Room 208.

international services

SIGGRAPH 98 and Orlando welcome thousands of international computer graphics scientists, developers, and practitioners to this year's 25th conference celebration. Members of the SIGGRAPH 98 International Committee and a multi-lingual staff of student volunteers are available to help international attendees take full advantage of all the programs and events, and the Exhibition.

Bilingual Panels

SIGGRAPH 98 provides a bilingual environment in one of its major programs. Panels are simultaneously interpreted into Japanese.

International Center

All international attendees are invited to make the SIGGRAPH 98 International Center their home away from home. During the conference, student volunteers provide assistance and conference information. Look for their yellow vests with flags that indicate their language fluency.

International Welcome Reception

The International Welcome Reception will be held in the Florida Ballroom of the Peabody Orlando hotel (across the street from the Orange County Convention Center), Sunday 19 July, 6 - 8 pm. All internationally registered attendees are invited.

Audio/Visual Services

Hall E 1

+1.407.248.5030

Sunday 19 July	7 am - 7 pm
Monday 20 July	7 am - 7 pm
Tuesday 21 July	7 am - 7 pm
Wednesday 22 July	7 am - 7 pm
Thursday 23 July	7 am - 7 pm
Friday 24 July	7 am - 2 pm

Direct all questions about audio/visual needs to this office. For more information on audio/visual services for speakers, see Speaker Prep Room.

Automated Teller Machines (ATMs)

There are several ATM located throughout the Orange County Convention Center.

Banks/Currency Exchange

The nearest bank to the Orange County Convention Center is Nations Bank. However, you are unable to exchange foreign currency unless you have an account there. The hotels that surround the Convention Center, Peabody Orlando, and the Omni have currency exchanges.

Bookstore

Hall F Lobby

Business Outreach Books is offering computer-graphics related books at the Orange County Convention Center during SIGGRAPH 98. Titles will also be available online after SIGGRAPH 98. See the SIGGRAPH 98 Web site for further details: www.siggraph.org/s98/

Sunday 19 July	noon - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8 am - 5 pm

Note: Bookstore refunds will only be processed during the conference. All bookstore policies are those of Business Outreach Books and not SIGGRAPH 98.

Busing

See Shuttle Services.

Check Room

Hall C Lobby, Hall B 4 Lobby, Hall E 1 Lobby

SIGGRAPH 98 provides complimentary luggage check services for briefcases, backpacks, and other small items during conference hours. SIGGRAPH 98 is not responsible for items left in the Check Room overnight. Items left after hours will be left unattended.

Child Care

Rooms 309, 310 A

Accent on Children's Arrangements provides age-appropriate child care activities for children from three months to 16 years of age at the Orange County Convention Center. Children must be registered for a minimum of three hours. Individualized evening child care is also available on a limited, first come, first served basis.

If you need to cancel a registration, you must call 48 hours in advance to qualify for a full refund of your child care fees. The Accent on Arrangements staff is certified in infant and child CPR. Child care services are guaranteed to be available during the following hours.

Sunday 19 July	11:30 am - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 7 pm
Wednesday 22 July	8 am - 7 pm
Thursday 23 July	8 am - 6 pm
Friday 24 July	8 am - 6 pm

Costs: \$8.50 per hour for children over 30 months; \$10.50 per hour for children 30 months and under. One-time registration and processing fee: \$10 per family.

Fees include snacks and beverages in the morning and afternoon for children over 30 months. Parents are responsible for their children's main meals.

Computer Animation Festival Office

Room 315 A
+1.407.248.4050

Contributors can gather here to exchange ideas, leave messages, or discuss questions and concerns.

Conference Management Office

Room 206
+1.407.248.5050

If you have questions regarding SIGGRAPH 98, call or stop by this office at anytime.

Exhibition Management Office

Room 209 C
+1.407.248.5040

If you have questions regarding the SIGGRAPH 98 Exhibition, feel free to call or visit a staff member here.

Exhibitor Registration

Hall B 2

Exhibitors should pick up their badges at the exhibitor registration counter, which is open during registration hours. See Registration.

First Aid Offices Outside Room 231

+1.407.248.9848

Hall C Lobby

+1.407.248.9808

A nurse or paramedic is on duty at the first aid areas.

Food Services

The Orange County Convention Center operates several food concession for the convenience of SIGGRAPH 98 attendees. Food carts and casual seating, are available throughout the convention center including CAFFEINE++ in Hall C and two restaurants on the exhibit floor in Halls B 1 and Hall E 1.

Hall C Offices

(Art Gallery: Touchware, Digital Pavilions, Enhanced Realities, sigKIDS)
+1.407.248.5016

Information Desks

Hall B 1 Lobby, Hall C Lobby, Hall F Lobby

For answers to your questions about SIGGRAPH 98, stop by the information desks. They can provide information on conference programs and events and Orlando-related questions.

International Services

Hall C Lobby
+1.407.248.4060

In the International Center members of the SIGGRAPH 98 International Committee and a multi-lingual staff of student volunteers are available to help international attendees take full advantage of all the programs and events, and the Exhibition. Look for the student volunteers with yellow vests and flags indicating their language fluency.

Internet Access Centers

Hall C, Room 231

Two fully networked areas in the OCCC provide complete Internet access. The Internet Access Centers are available to all attendees during registration hours beginning Sunday, 19 July.

Lost and Found Security

After the conference, all items will be turned over to the OCCC security office. To inquire about lost items during and after the conference, call OCCC security at +1.407.345.9828 (or extension 9828 from any OCCC house phone). Lost registration badges will be located in Special Assistance, Hall B 1.

Merchandise Fulfillment Center

Hall B 1

Your conference documentation (included with registration) must be picked up at the Fulfillment Center:

Technical materials and conference documentation will not be shipped, nor will refunds be given for any material that is not picked up at the conference.

Saturday 18 July	6 - 8 pm
Sunday 19 July	noon - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8 am - 1 pm

Technical Material Sold After the Conference

SIGGRAPH 98 Conference Proceedings contains the permanent record of the technical papers and panels program from SIGGRAPH 98.

SIGGRAPH 98 Proceedings CD-ROM contains the electronic version of the conference proceedings, including papers, images, and additional material not found in the printed version including QuickTime movies and extended versions of papers.

SIGGRAPH 98 Conference Proceedings Videotape contains videotape supplements to technical papers and panels.

SIGGRAPH 98 Conference Abstracts & Applications and CD-ROM contains the permanent record of images from Digital Pavilions, Educators Program, Enhanced Realities, Interactive Dance Club, Panels, sigKIDS Art, Sketches (Technical; Applications; Art, Design, and Multimedia; and Animation) and the SPACE Electronic Gallery.

Message Center

Hall C Lobby
 +1.407.248.5000

The message center is located in the Hall C Lobby of the OCCC. Here you will find kiosks corresponding to each letter of the alphabet. You may leave a note for a friend pinned to one of the kiosks.

Orange County Convention Center

9800 International Drive
 Orlando, Florida 32819
 +1.407.345.9800

• Accessibility

The convention center is wheel-chair accessible. It has no curbs, and there are elevators to the upper levels. Wheelchairs are available for use in the OCCC at no charge. They may be checked out with an ID at any OCCC information desk. If you need a wheelchair for use outside the OCCC, call Randy's Mobility: +1.407.855.6562.

• Kinko's Business Center

There is a business center located in the Hall C Lobby. A variety of services are offered by the Business Center including:

- Computer time rental
- Faxing services
- Photocopying
- Shipping services
- Special finishing services (including hand stapling, collating, folding, binding and reduction/enlargement).

The business center also sells office supplies (including folders, scissors, paper clips, rubber bands, pencils, packing tape, paper, pens, glue, computer disks, transparencies and more). Business center hours are 8 am - 5:30 pm. Limited business services (faxing and copying) are also offered at the shipping desk in Hall B 1 and outside Hall E (9 am - 4 pm, Sunday - Friday)

• Parking

SIGGRAPH 98 attendees can park at the Orange County Convention Center for \$5 per day.

Pathfinders

Hall B 1

A volunteer project dedicated to providing assistance to first-time SIGGRAPH conference attendees. Let us help you navigate your way through SIGGRAPH 98. Feedback always welcome at: pathfinders@siggraph.org

Registration (Advance & Onsite)

Hall B 1

Saturday 18 July	6 - 8 pm
Sunday 19 July	noon - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8 am - 1 pm

Restaurant Information Desks

Hall D 2 Lobby

There desks are staffed with individuals happy to assist you in making reservations at local Orlando restaurants. These desks are open during registration hours. The Restaurant Information desk is closed on Saturday.

Shipping Desk

Hall B 1

Staff can assist you in shipping your merchandise, course notes, and other conference materials. For your convenience, the shipping desk provides next-day air, second-day air, and regular ground shipping services to destinations throughout the world. The shipping desk is open during registration hours. You can also ship using the same services from the Kinko's Business Centers located in Hall C Lobby (8 am - 5:30 pm, Saturday - Friday) and outside Hall E (9 am - 4 pm, Sunday - Friday).

Shuttle Service

+1.407.851.5222

Orange County Convention Center Shuttle Hours

Saturday 18 July	5 - 8:30 pm
Sunday 19 July	10 am - 7:30 pm
Monday 20 July	7:30 am - 9:30 pm
Tuesday 21 July	7:30 am - midnight
Wednesday 22 July	7:30 am - midnight
Thursday 23 July	7:30 am - midnight
Friday 24 July	7:30 am - 6 pm

SIGGRAPH 98 provides complimentary shuttle service between most conference hotels and the Orange County Convention Center. Look for signs and flyers indicating pick up times and locations at your hotel. Please note: Monday-Thursday there will be a very limited number of buses available from 9:30 pm - 1 am to transport attendees to and from the Interactive Dance Club.

If you have any shuttle questions contact the Shuttle Service directly during official shuttle hours. Also, for assistance with handicap service, please call +1.407.851.5222. SIGGRAPH 98 provides buses with wheelchair lifts and tie-downs.

Orange County Convention Center Shuttles to Receptions

Course Reception

Renaissance Orlando Resort Pool
6677 Sea Harbor Drive
+1.407.351.5555
Monday 20 July 8 - 11 pm

25th Celebration Party

Hosted by SIGGRAPH 98, SIGGRAPH Professional Chapters, and friends
Wide World of Sports Complex at Walt Disney World
Wednesday 22 July 9 pm - 1 am

Orlando Science Center
777 East Princeton Street
+1.407.514.2000
Thursday 23 July 8 - 11 pm

Coaches begin shuttling from all hotels and the OCCC 30 minutes before the receptions start. The last coach departs 15 minutes after the receptions close. Attendees who are staying at the Peabody Hotel should ride Route 4.

SIGGRAPH Store

Room 207

The store is for casual browsers and serious shoppers. Stop by to purchase additional technical materials plus gifts (t-shirts, baseball shirts, baseball caps, calendars, trading cards, juggling balls, umbrellas) for your family, co-workers, and yourself. Technical material and conference documentation are available for purchase at the store. SIGGRAPH 98 merchandise is available on a first-come, first-serve basis.

Merchandise vouchers are only valid in the Fulfillment Center located in Hall B1 of OCCC.

Saturday 18 July	6 - 8 pm
Sunday 19 July	noon - 7 pm
Monday 20 July	8 am - 6 pm
Tuesday 21 July	8 am - 6 pm
Wednesday 22 July	8 am - 6 pm
Thursday 23 July	8 am - 5 pm
Friday 24 July	8 am - 1 pm

Speaker Prep Room

Room 232
+1.407.248.4044

Saturday 18 July	2 - 8 pm
Sunday 19 July	7 am - 7 pm
Monday 20 July	7 am - 7 pm
Tuesday 21 July	7 am - 7 pm
Wednesday 22 July	7 am - 7 pm
Thursday 23 July	7 am - 7 pm
Friday 24 July	7 am - 2 pm

- All speakers must check in at the Speaker Prep Room at least 24 hours before their presentation.
- Speakers and contributors should use the contributor registration desk in Hall B 1 to pick up registration credentials and obtain conference information.
- Speaker ribbons and badge holders are available only in the Speaker Prep Room.
- Speakers may use the Speaker Prep Room to prepare for their presentation, preview slides and videotapes, sort slides, and obtain slide carousels.
- Changes in audio/visual equipment needs in presentation rooms should be directed to the Speaker Prep Room.

Special Assistance Desk

Hall B 1 (Registration Area)
+1.407.248.4220

Staff members at the special assistance desk help attendees resolve a wide range of possible problems and concerns, including:

- Credit card problems (validations, errors)
- Lost badges
- Registration corrections and upgrades
- Substitute registration (only if authorized on company letterhead)

Special Policies

- Conference registration in any category is limited to ages 13 and older.
- Children under 16 are not permitted in the Exhibition.
- No cameras or recording devices are permitted at SIGGRAPH 98.
- SIGGRAPH 98 may record all, or portions of, conference programs and events.

Ticket Purchases and Exchanges Counter

Hall B 1

Electronic Theater Tickets

One ticket per person is included with Full Conference and Conference Select registrants. Every attempt is made to accommodate your requested Electronic Theater evening. If you would like to exchange your ticket, you may do so at this counter based on availability. All performances contain the same material.

Badged attendees may purchase up to two Electronic Theater tickets (subject to availability) at Onsite Registration in Hall B 1 beginning at 6 pm Saturday, 18 July. Last-minute tickets are generally available. They will be sold at the door to the Electronic Theater one hour prior to showtime. All sales are final.

Reception Tickets

Course and Papers/Panels reception tickets are also available for sale at this counter. Cost is \$45 per person, per reception. All sales are final.

exhibition

Get up-close and hands-on with the newest hardware systems, software tools, and creative services from over 250 companies. SIGGRAPH 98 hosts the year's largest, most comprehensive exhibition of products and services for the computer graphics and interactive marketplace, featuring the industry's established leaders and emerging challengers.

Startup Park

Exclusively reserved for small, first-time exhibitors who are introducing their technologies to the SIGGRAPH audience. Many of the companies that dominated the computer graphics industry did not exist 10 years ago. Startup Park presents the products and services that could dominate the SIGGRAPH 2002 Exhibition.

Locations

Hall B 1 - 4

Hall D 1 - 2

Hall E 1

Days

Hours

Tuesday 21 July 10 am - 6 pm

Wednesday 22 July 10 am - 6 pm

Thursday 23 July 10 am - 5 pm

Exhibits Plus Registration

With Exhibits Plus, you receive admission to the Exhibition, Startup Park, Art Gallery: Touchware, Animation Theaters, Digital Pavilions, Enhanced Realities, Interactive Dance Club, sigKIDS, Special Sessions/Evening, Career Services, Fundamentals Seminar, International Services, Internet Access Centers, Keynote Address/Awards, Special Interest Groups & Birds of a Feather, 25th Conference Recognition Ceremony, 25th Celebration Party, and the Welcome Reception. Exhibits Plus registration is non-refundable.

Afterburn turns MAX particle systems into incredibly realistic clouds, fire, smoke, explosions, and nebula. The film-quality results are fully 3D and volumetric. Self-shadowing also casts shadows onto other objects. Five noise types and many animatable parameters provide precise FX control. Fully multi-threaded for fast rendering.

CREATIVE MINDS CREATIVE WORK

PERFORMS LIKE A SUN.

Viewperf CDRS-03 OpenGL Performance Benchmark[®] (Test Workstations - Relative Price Performance)

Dell Precision™ 410
w/Intergraph Intense
3D Pro 3410T

Ultra 10
with Elite 3D m3

[®]Price per composite score.
Lower number indicates greater price value.
Viewperf measures the 3D rendering performance
of systems running under OpenGL.
For more in-depth information, refer to
www.specbench.org/gpc/opc/opc.cdrs.summary.html.

Of course, you want one of the best workstations there is, but it never hurts to get a great price either right? Well for once, you can have it both ways. Because the Dell Precision™ WorkStation 410 with Windows NT 4.0 has all the high performance application availability, quality system hardware and mind-boggling graphics that Sun is known for. In fact, the Dell® WorkStation is staggeringly comparable to the industry standard. Aside from one very important feature. The price. As the benchmark test above shows, when it comes to price/performance, Dell blows Sun away. And what do you sacrifice?

PRICED LIKE A DELL.

The new Dell Precision™ WorkStation 410 with Windows NT 4.0. All the performance of a Sun for less money.

Not a thing. With the Intel® 400MHz Pentium® II processor, 3D video cards along with Microsoft Windows NT Workstation and the simplicity of Microsoft Windows, you've got all the power you need. So the decision is easy. Call 1-800-925-9159. Or visit our website at www.dell.com.

Visit Intel and experience the Pentium 11 Xeon processor, your best choice for visual content creation. Workstations powered by the Intel Architecture give you the price and performance needed for high-end authoring.

A new word
for workstations.

The Pentium® II

xeon™

Processor

Work [wonder]

ers] station

The Pentium® II Xeon™ Processor.

The new Intel® Pentium® II Xeon™ processor delivers the power for amazing workstation performance. It's hard-core processing. So it's no wonder demanding applications like Pro/ENGINEER and SOFTIMAGE|3D are designed for Intel®-based workstations, and new titles like CATIA, Maya and Design Compiler are being introduced for them.

Whether you're creating hot special effects, designing the next-generation automobile, or managing multi-million dollar stock portfolios, it gets done fast. And by adding a second processor, you can dial up the performance, and work even faster. All in all, it makes for an amazing way to work. Visit us at SIGGRAPH, booth 979 and find out more. www.intel.com/PentiumII/Xeon

**KEY INTO
COMPUTER GRAPHICS WITH
MORGAN KAUFMANN PUBLISHERS, INC.**

**SIGGRAPH
BOOTH #
2101**

**JIM BLINN'S CORNER:
DIRTY PIXELS
Jim Blinn**

For almost three decades eminent computer graphicist Jim Blinn has coupled his scientific knowledge and artistic abilities to foster the growth of the computer graphics field. This book offers a new and timely collection of articles gleaned from Blinn's award-winning column, "Jim Blinn's Corner," in the technical magazine *IEEE Computer Graphics and Applications*, and provides a wealth of tips, tricks, and useful graphics methods and observations that will be of interest to everyone in the field.

July 1998; 215 pages; paper; ISBN 1-55860-455-3; \$29.95

**RENDERING WITH RADIANCE
Greg Ward Larson &
Rob Shakespeare**

This unique book provides a comprehensive tutorial and reference for Radiance whether the task is to render production-quality animations, design a museum gallery, or present an accurate facsimile of a site in court. The accompanying CD-ROM includes the complete source code and documentation for the UNIX version of the Radiance suite, example scenes, Radiance models and libraries, and archived questions and answers from users.

1998; 687 pages; cloth; ISBN 1-55860-499-5; \$79.95

**DIGITAL COMPRESSION FOR MULTIMEDIA
PRINCIPLES AND STANDARDS
Jerry D. Gibson, Toby Berger,
Tom Lookabaugh, Dave Lindbergh,
& Richard L. Baker**

This book, authored by five experts who are heavily involved in research, development, and standards-setting activities, provides an overview of the current standards for speech, audio, video, image, fax, and file compression. It is intended for engineers and computer scientists who design, manufacture, and implement compression systems, as well as system integrators, technical managers, and researchers.

1998; 476 pages; cloth;
ISBN 1-55860-369-7; \$74.95

**READINGS IN INFORMATION VISUALIZATION
USING VISION TO THINK
Stuart K. Card, Jock Mackinlay, &
Ben Shneiderman**

A groundbreaking full-color collection of the classic papers on Information Visualization. This is the only book on the field with the depth necessary for use as a text or as a reference for the information professional. The book provides the basic source material as well as the editors' analyses of the field and each contribution in an accessible manner. An exciting and timely collaboration among the field's most-respected researchers.

July 1998; 576 pages; paper;
ISBN 1-55860-533-9; \$59.95

**WARPING AND MORPHING OF
GRAPHICAL OBJECTS
Jonas Gomes, Bruno Costa,
Lucia Darsa, & Luiz Velho**

This classic book defines the field and presents a unifying view of warping and morphing in computer graphics. It provides indispensable reading for professional and academic computer scientists interested in the latest developments of the conceptual as well as practical aspects of morphing and warping. The accompanying CD contains animations, software, audio, and graphical objects.

October 1998; 640 pages; cloth+CD-ROM;
ISBN 1-55860-464-2; \$79.95

Screen Actors Guild?

What's This?

Screen Actors Guild is a "smart" tool that allows programmers to enhance web sites, games and other multi-media by adding high-quality voiceovers.

OK

Cancel

Professional actors are smart tools because they can enhance and add diversity to the programmer's original vision.

This added quality will grab the attention of gamers and keep them coming back to your product.

The biggest trade show of computer graphics and content production in Japan!

Content Creation

NICOGRAPH 98

The Convention for 2D/3D computer graphics and digital design,
and content production, delivery, distribution system

November 25 Wed. to **27** Fri. **1998**

Venue: Nippon Convention Center, Makuhari Messe, Japan
Organized by: Multimedia Content Association of Japan, Nihon Keizai Shimbun, Inc.

Call for participation to...

" ContentCreation+NICOGRAPH98"

Show your latest graphics techniques and solution for users in Japan who couldn't attend SIGGRAPH this year!
You can find your best users and partners in Japan. We provide you the best opportunity!

" NICOGRAPH CG FILM SHOW98"

Apply your best CG works to the biggest CG animation festival in Japan, which will be held in
parallel with " ContentCreation+NICOGRAPH98". CG master pieces of 1998 in the world gather in this show!

For further information, please contact:

Secretariat of " ContentCreation+NICOGRAPH98" : General Project Department, Nihon Keizai Shimbun, Inc.

In 1987, you reached your target
in PC Week and PC Magazine.

Now it's time
to **IMPROVE** your aim.

In ten years, everything about
the **high technology market**
has changed, so why shouldn't
your marketing targets?

NewMedia Magazine reaches
the new class of business
leaders who are tapping the
power of digital technology
to help corporations grow.
We call them the **Digital Elite**.

You can target them in
NewMedia Magazine,
better than anywhere else.

Unbeatable

The referee has stopped the contest. The scorecards have been turned in. We have a winner.

CGW Magazine!

The 12-time undisputed champion, has again been voted "Best Read Magazine" by SIGGRAPH attendees.* CGW is the place to turn for the most reliable, up-to-date information on CAD, animation and visualization. But don't take our word for it. Ask the people who know. SIGGRAPH did.

Stop by Booth #2227 For

3D ANIMATION TOOLS

Houdini™

Does your animation software help you work smarter?

Instead of hard-coded solutions, Houdini uses the procedural approach to animation pioneered by Side Effects Software. You can drive your workflow to go wherever you want, whenever you want. Revisions are easy, and all your changes happen in real time. So, if you're not satisfied with one approach, you can try another... and another.

It's that flexible.

U N L I M I T E D

flexibility

That's the power of Houdini, the 3-D animation package for professionals, from Side Effects Software.

Visit us at
SIGGRAPH
Booth #
1331

Seamlessly integrating 3-D modeling and animation with 2-D compositing and rendering, Houdini reduces frequent tool-switching. Plus, Houdini and its user interface offer a broad range of customization options – for animators and technical directors alike – through its scripting language, expressions, and developer's kit.

Houdini lets you do more, more efficiently. Its inherent flexibility grows with you, keeping pace with your skill and imagination.

Who knows? It might even stretch your career.

SIGGRAPH: the organization

Stop by these SIGGRAPH booths in Hall C Lobby.

SIGGRAPH: The Organization

SIGGRAPH is the Special Interest Group on Computer Graphics and Interactive Techniques. In the span of 30 years, SIGGRAPH has grown from a handful of computer graphics enthusiasts to a diverse membership including artists, engineers, animators, filmmakers, software and hardware developers, scientists, mathematicians, and other professionals in the field of computer graphics. In addition to its own annual conference, SIGGRAPH serves the worldwide graphics community with the sponsorship of focused conferences, professional chapters, awards, grants, educational resources, online resources, public policy, and the SIGGRAPH Video Review. SIGGRAPH offers additional benefits to its members including its quarterly newsletter, Computer Graphics and discounts on registration and publications for the annual and other conferences. For general information on SIGGRAPH, contact:

ACM SIGGRAPH
+1.212.626.0500
+1.212.944.1318 fax
acmhelp@acm.org
www.siggraph.org

The SIGGRAPH Executive Committee will hold the annual open business meeting on Tuesday 21 July 5:30 - 6:30 pm in Room 240 AB.

SIGGRAPH Education Committee

SIGGRAPH supports both computer graphics education and the use of computer graphics in education through its Education Committee. The committee's activities include curriculum studies, a quarterly newsletter for educators, and educational projects. The Education Committee booth features SPACE, a juried exhibition of student animations and posters, and a display of student slides submitted by faculty from around the world and SPICE, a juried exhibition of student interactive projects. For more information contact:

Jack Bresenham
SIGGRAPH Director for Education

+1.803.323.3960 fax
jack_bresenham@siggraph.org
www.siggraph.org/education

SIGGRAPH Professional Chapters

Professional Chapters of ACM SIGGRAPH exist in 35 cities in 12 countries around the world. They form an international multi-cultural network of like-minded people who develop, continue, and extend the work and achievements presented at the annual ACM SIGGRAPH Conference. Each chapter includes members involved in education, the arts, research, development, industry, and entertainment who are interested in the development of computer graphics and its related technologies and applications. Here is your opportunity to continue your SIGGRAPH experience by joining a professional chapter. If there is no professional chapter in your area, inquire at the SIGGRAPH Professional Chapters Booth about how to form one. For more information contact:

Scott Lang
SIGGRAPH Director for Professional Chapters
lang@siggraph.org
www.siggraph.org/chapters

SIGGRAPH One More Time

SIGGRAPH offers the opportunity at SIGGRAPH 98 to purchase conference proceedings, CD-ROMs, and slide sets from previous SIGGRAPH annual conferences as well as from other SIGGRAPH-sponsored conferences and workshops. Many items are in very limited quantities. For more information contact:

Stephen Spencer
SIGGRAPH Director for Publications
spencer@siggraph.org

SIGGRAPH Video Review

SIGGRAPH Video Review is the world's most widely circulated video-based publication. Since 1979, SIGGRAPH Video Review has illustrated the latest concepts in computer graphics and interactive techniques/technologies. Over 125 issues provide an unequalled opportunity to study advanced computer graphics theory and applications. SIGGRAPH Video Review tapes are available at SIGGRAPH 98 in NTSC VHS and PAL VHS. For more information contact:

SIGGRAPH Video Review

ACM

ACM serves as an umbrella organization to information-technology professionals. Benefits of membership include discounts on cutting-edge magazines, journals, books, and conferences. ACM members have access to the SIGGRAPH content in the ACM Digital Library, which contains six years of publication archives and conference proceedings, 22 high-tech publications and a state-of-the-art search engine. ACM is the resource for lifelong learning in the rapidly changing information technology field. For more information, contact:

SIGGRAPH 99

Join us next summer (8-13 August 1999) in sunny southern California, when the turn-of-the-century magic of computer graphics and interactive techniques will amaze 50,000 enthusiasts from around the world.

Do you have the skills, energy, and sense of adventure it takes to help us create this major international event? Stop by the SIGGRAPH 99 booth or join us at the SIGGRAPH Get Involved (Tuesday 21 July 5 - 6:30 pm, Room 330 Lobby). Meet the SIGGRAPH 99 Conference Committee. Pick up a copy of the SIGGRAPH 99 Call for Participation. Volunteer for the next generation of the virtual future and help make it a reality in LA!

SIGGRAPH 99
+1.312.321.6830
+1.312.321.6876 fax
siggraph99@siggraph.org
www.siggraph.org/s99/

how to get involved

ACM SIGGRAPH is dedicated to the advancement of computer graphics and interactive techniques through activities that foster the exchange of information among graphics professionals of all kinds. The organization has a long tradition of bringing together a wide variety of people (users, researchers, teachers, product developers) in an exciting exchange of ideas that benefits our entire community.

The heart of SIGGRAPH is its active, talented core of volunteers, and we are always looking for new people with new ideas to keep SIGGRAPH vibrant. It's easy to find SIGGRAPH volunteers at SIGGRAPH 98. Many very involved volunteers will be in the SIGGRAPH organization's booth in the Hall C Lobby. You can also meet us at our joint open house with the SIGGRAPH 99 committee.

SIGGRAPH Get Involved
Tuesday 21 July, 5 - 6:30 pm
Room 330 Lobby, Orange County Convention Center

Membership

SIGGRAPH is the world's largest professional society for persons working in computer graphics and interactive techniques. It has members all over the world and in every facet of the computer graphics field. Being a member of SIGGRAPH demonstrates your involvement in the computer graphics community and your support for SIGGRAPH's goals and activities. The strength of SIGGRAPH's voice on issues important to our field depends on its activities and on the number and quality of our membership.

As a SIGGRAPH member, you receive the Computer Graphics newsletter, the Conference Proceedings and CD-ROM, Conference Abstracts & Applications and CD-ROM, Electronic Art & Animation Catalog and CD-ROM. You may also choose a less expensive "Lite" membership that includes only the newsletter. All members enjoy discounts on SIGGRAPH conferences and publications, and have the opportunity to subscribe to the proceedings of other computer-graphics-related conferences through the Member Plus program.

You can join SIGGRAPH at the ACM booth in Hall C Lobby of the Orange County Convention Center, or look for membership information at: www.siggraph.org/

SIGGRAPH Activities

In addition to sponsoring the annual conference, SIGGRAPH has many activities that go on throughout the year and around the world. Many of the activity areas mentioned below have open meetings during SIGGRAPH 98.

Publications

SIGGRAPH's Publications Committee is responsible for all of SIGGRAPH's publications in print, on CD-ROM, on video, and online. The committee is made up of people with skills in editing, writing, and producing various media, and is a great place for someone skilled in these areas to help others learn about computer graphics and interactive techniques. For information, contact Stephen Spencer, SIGGRAPH Director for Publications.

Other Conferences

SIGGRAPH sponsors or has formal cooperation with about a dozen other conferences each year. These include such events as the Interactive 3D Graphics Workshop, the Computational Geometry Conference, the ACM Multimedia Conference, the Volume Visualization Symposium, UIST: User Interface Software and Technology Conference, and the Solid Modeling Conference. SIGGRAPH works with the organizers of SIGGRAPH-sponsored conferences and coordinates relationships with other conferences. For information, contact Nick England, SIGGRAPH Director at Large.

Public Policy

SIGGRAPH's Public Policy Committee provides information on relevant external activities, such as proposed legislation, to SIGGRAPH members and others of the technical community. It also provides education on the implications of technology to the non-technical community. For information, contact Bob Ellis or Judy Brown, Co-Chairs of the Public Policy Committee.

SIGGRAPH Meetings at SIGGRAPH 98

SIGGRAPH Business Meeting

Tuesday 21 July 5:30 - 6:30 pm
Room 240 AB, Orange County Convention Center

SIGGRAPH Professional Chapters' Annual Business Meeting

Wednesday 22 July 10 - 11:30 am
Room 204 B, Orange County Convention Center

SIGGRAPH Education Committee

Wednesday 22 July 2 - 3 pm
Bayhill Suites I & II, Peabody Orlando

SIGGRAPH Education Committee

Breakout - Art

Wednesday 22 July 3 - 4 pm
Bayhill Suite III, Peabody Orlando

SIGGRAPH Education Committee

Breakout - Computer Science

Wednesday 22 July 3 - 4 pm
Bayhill Suite IV, Peabody Orlando

SIGGRAPH Education Committee

Breakout - K-12

Wednesday 22 July 3 - 4 pm
Bayhill Suite V, Peabody Orlando

SIGGRAPH Public Policy

Thursday 23 July 1 - 3 pm
Room 225 A, Orange County Convention Center

SIGGRAPH Executive Committee Meeting

Saturday 25 July 9 am - 5 pm
Orlando III, Peabody Orlando

How to Contact SIGGRAPH

You can send email to SIGGRAPH people by addressing them as:
firstname_lastname@siggraph.org

The directors whose names appear here are also members of the Executive Committee. Their contact information is listed on the inside front cover of the Conference Proceedings and in all issues of the Computer Graphics newsletter.

CALL FOR PARTICIPATION

The award-winning producer of the multi-platinum "Mind's Eye" series of computer animation videos wants to see your animation. We are in production on several new video projects that will require hours of already existing as well as new animation.

HANDSOME ROYALTIES

Half of all the net revenues are shared by the animators!

GREAT EXPOSURE

Your work will be admired by hundreds of thousands of people around the world!

Visit our Web Site at
<http://www.odyssey3d.com>
